The elections passed off quietly in all the States except Mississippi, where there was a serious riot in a place called Marion, resulting in the death of several persons. In this instance, contrary to the usual state of things in the South, the negroes seem to have been the aggressors. There was comparatively little interest shown in the elections, and a light vote was polled. The Republican and Readjuster coalition party carried Virginia, electing Cameron Governor. The Republicans carried New York and Pennsylvania. Wolfe, the independent candidate for State Treasurer in Pennsylvania, polled about 50,000 votes, showing the growth of the independent vote in that State. A feature of the election in Wisconsin was the great increase in the temperance vote. The Prohibitionists are said to have drawn twelve or fifteen thousand votes from the Republicans. In summing up it may be said that the leading feature of the elections was the increase in the independent vote, and the disposition shown to go outside of party lines, especially in the election of candidates for local offices. This latter point was well illustrated in the cities of New York and Brooklyn. In the latter city Mr. Low, the Independent Republican candidate for Mayor, was elected in spite of strenuous efforts on the part of the Machine to defeat him.

Mr. Scoville, Guiteau's counsel, has outlined the course which he intends to take in the trial which is now in progress. He says that he intends to follow the prisoner's life from the time his mental weakness was first discovered up to the day of the shooting, and will show that for years his mind has been unbalanced, and that he has been unquestionably insane on certain points. He says that, as is the case with monomaniacs, Guiteau at times was perfectly rational; but that again he would become morose, and show unmistakable evidence of being mentally weak. It is said to be Mr. Scoville's intention to bring up the political situation at the time of the shooting, and to show that it had its influence upon the mind of his client.

Guiteau's trial began on Monday. Messrs. Scoville and Robinson represented the assassin. Mr. Robinson opened the case by making a speech requesting that the trial might be postponed for five days. Mr. Scoville, however, objected and said that he did not wish to have it postponed. Guiteau himself also jumped up in an excited manner and objected to the postponement. The disagreement of the counsel upon this point put Judge Cox in somewhat of a dilemma. He decided that the wishes of the prisoner and his immediate representative, Mr. Scoville, should be regarded, and ordered the trial to proceed. Guiteau acted in an excited manner while in court, attempting several times to speak and to read a paper which he had prepared. He said that he was a lawyer himself and wished to conduct his own trial, and did not need any counsel except for "technicalities." Five jurors were qualified on Monday. The paper which Guiteau attempted to read was a long, rambling account of his life and of his family. He appeals to the "liberal and Stalwart press of the nation for justice," and reiterates his statement that he was impelled by the "Deity" to "remove the late President."

On Thursday Judge Cox rendered his decision upon the legality of the method of proceeding by information in the Star-route cases. He decided that the offences charged were "infamous" in the legal and technical meaning of the word, and since, under the Constitution, proceedings cannot be begun by information where crimes of an infamous nature are charged, the prosecution was debarred from proceeding in this manner.

After Judge Cox had delivered his decision Mr. Cooke made a statement in behalf of the Government. He said that the adjournment of the Grand Jury by District Attorney Corkhill had been a great surprise to the Attorney-General and himself; that they had received no notice of it, and that it was an "unusual and extraordinary" proceeding. In answer to the assertion that the Grand Jury could have been reconvened, Mr. Cooke said that no intimation that such was the case had been conveyed to him until Mr. Corkhill made his apologies in court the other day, and that information had been resorted to in the hope of saving the case. There has been much criticism of District Attorney Corkhill's course since Mr. Cooke made his statement, some people believing that he has "deliberately betrayed" the Government.

Judge Cox's decision will not interfere with the prosecution. Cases are now being prepared for the Grand Jury, and three will be presented during the present session, but the larger number will be held for the next Grand Jury, which will be impanelled about the 1st of January.

Mr. Windom has entirely completed his funding operations. The total of the bonds continued at 3½ per cent. is $579,560,050. Mr. Windom shows that his method has resulted in a much greater saving to the Government than would have been effected by the refunding measures proposed by the last Congress.

President Arthur has finally accepted Attorney-General MacVeagh's resignation. Solicitor-General Phillips will be the acting Attorney-General until a new appointment is made. On Monday the oath of office was administered to Judge Folger, and he formally took possession of his office as Secretary of the Treasury.

The Department of Agriculture at Washington has issued a report showing the condition of the cotton, wheat, and corn crops on November 1. The returns from the ten principal cotton-growing States give an indicated yield per acre considerably less than last year. There is a decrease from last year's wheat crop of about one hundred million bushels. The quality of the crop is, however, reported to be good. There is also a decrease of about twenty-five per cent. in the corn crop. The principal cause of the falling off in these crops is said to be the prolonged droughts, followed by excessive rains.

Mr. Nimmo, Chief of the Bureau of Statistics, has published his report, in which he discusses the "railroad problem." He finds that there has been considerable reduction in the cost of transportation on the railroads of the country. He concludes by saying that there are two vitally important questions confronting public attention: first, whether there are evils connected with the railroad system of the United States which injuriously affect the public interest, and whether they are of sufficient magnitude to demand governmental interference; and second, by what means can such interference be exercised without putting upon the Government too great a responsibility and great difficulties of an administrative nature? To the first of these questions we should judge from Mr. Nimmo's report that he was inclined to answer yes. He recommends a thorough investigation of the whole question by a committee of experts who are competent to pass upon the bearings of the transportation question in its relation to the agricultural and other interests of the country, and upon the economic and practical questions connected with the actual traffic interests of the railroads.

Health Officer Townsend, of the District of Columbia, has submitted his annual report upon the operations of the Health Department for the year ending June 30. He says that the prominence and sensational coloring given to everything coming from the national capital during the recent exciting period gave undue prominence to the question of Washington malaria, and did gross injustice to the healthfulness of the climate. He publishes a comparative statement showing that Washington stood fifth in the annual death rate of the cities of the United States from zymotic diseases during the period when so much criticism was advanced about Washington malaria.

The annual report of Surgeon-General Barnes shows that among the white troops the total number of cases of all kinds reported on the sick list during the year was, white, 37,408, being at the rate of 1,768 per 1,000 of mean strength; and colored, 4,650, or 1,984 per 1,000 of mean strength. The total number of deaths from all causes was, white, 197, or 9 per 1,000 of mean strength, and colored, 48, or 20 per 1,000. The Surgeon-General invites attention to the need of a new fire-proof building for the Army Medical Museum and Library.

It is thought that the Mormon problem will be discussed in the House of Representatives very soon after the meeting of Congress. There are two contesting delegates from Utah: one, Mr. Cannon, holds the certificate of the Secretary of State; the other, Mr. Campbell, holds that of the Governor. Cannon is a polygamist. It is thought that the admission of Cannon to a seat will be objected to, and that this will bring on the discussion.

The National Civil-Service Reform League intend sending a deputation to wait upon President Arthur soon after the assembling of Congress. The Central Committee of the League, as now constituted, will be the nucleus of the deputation, which will be increased by delegates from the important Civil-Service Reform associations throughout the country. The design is not only to represent to the President the views of the associations on the subject of the reform, but particularly to impress the public with its nature and great importance.

It is said that bills amounting to three hundred thousand dollars have been received at the Treasury Department for mourning decorations on the public buildings throughout the country in memory of the President. In each case a reply has been sent that the matter will have to be laid before Congress, as there is no appropriation out of which such expenses can be paid.

Colonel Corbin, master of ceremonies at the Yorktown celebration, has stated that the total expenses will probably be found to have been not more than $40,000, and that Congress will not be asked for a deficiency appropriation of more than ten or twelve thousand dollars.

The Hon. Lionel Sackville-West called on President Arthur on Monday, and presented his credentials. The customary congratulatory addresses were made.

The Atlanta Exposition is said to be at last complete. There are nearly two thousand exhibits, filling four large buildings and several smaller ones. The attendance has been greatly increased by the reduction of the fares on the various railroads leading to Atlanta. It is thought that the Exposition will not be closed on January 1, as was originally intended, but will be continued at least to the first of February.

Deputy Attorney-General Gilbert and Insurance Commissioner Foster, of Pennsylvania, appeared in court at Harrisburg on Monday, and applied for writs of quo warranto against a number of mutual-insurance (popularly known as "graveyard" insurance) companies that had not complied with the terms of their charters. This step, which is the first that has been taken in Pennsylvania to break up these nefarious concerns, has caused much alarm among the large number of these companies in the State of Pennsylvania.

A curious attempt at blackmail was brought to light in New York on Monday. A man by the name of J. Howard Welles, who has "high social connections," has for some time past been writing anonymous letters to Mr. Jay Gould, the well-known railway operator, threatening him with death unless he would give him "points on stocks." The matter was put into the hands of the police, and Welles was lured on until he was finally discovered and arrested on Sunday.

The Canadian yacht *Atalanta*, which was sent down here to contest for the *America's* Cup, was badly defeated in two races on Wednesday and Thursday by yachts belonging to the New York Yacht Club.

Mme. Adelina Patti, the celebrated singer, is giving concerts in New York. She last appeared here in 1859.

FOREIGN.

M. Gambetta announced his new Cabinet on Monday. It is composed as follows: Gambetta, President of the Council and Minister of Foreign Affairs; Cazot, Minister of Justice; Waldeck-Rousseau, Minister of the Interior; Paul Bert, Minister of Public Instruction; Rouvier, Minister of Commerce; Cochery, Minister of Posts and Telegraphs; Allain-Targé, Minister of Finance; Compenon, Minister of War; Gougeard, Minister of Marine; Proust, Minister of Fine Arts; Devès, Minister of Agriculture; Raynal, Minister of Works. The declaration of policy made by M. Gambetta at the opening of the Chamber of Deputies on Tuesday contains pacific assurances in regard to the foreign policy, declares the necessity of revising the mode of electing senators, and advocates the introduction of the *scrutin de liste*. The Cabinet does not seem to have been received with very great favor in France, most of the men being not very well known. The London *Times* says that the new Ministry "is not so much a Ministry of Gambetta as it is Gambetta himself."

The debate on Tunisian affairs was continued in the French Chamber of Deputies on Wednesday. Premier Ferry replied to the attacks on the Government. Shortly after M. Ferry's speech, a royalist deputy proposed, "in terms insulting to the Republic," a vote of censure on the Ministry, which caused a "tremendous uproar." On Thursday M. Ferry and his colleagues sent their resignations to President Grévy, who accepted them and called M. Gambetta to form a cabinet.

In the French Chamber of Deputies on Friday, General Farre, the retiring Minister of War, presented a bill for a supplementary vote of 28,000,000 francs for the Tunis and Oran expeditions.

General Logerot has started from Kairwan on his march to Gabes. It is said that he strongly objected to undertaking the expedition, and only prepared to start on receiving stringent orders from Paris. The route lies through a difficult and mountainous country, where operations will be almost impossible after the rains which have already begun. The expedition is said to be unpopular to the last degree among all ranks, and is openly denounced as a waste of lives. Fever and dysentery continue among the French troops.

Señor Moret, who recently went over to the Government, delivered a speech in the Spanish Cortes on Thursday, in which he announced that he would support the Government as long as a liberal policy was pursued. This announcement was received with great applause, and Premier Sagasta, in replying, welcomed the adhesion of Señor Moret and his party to the present régime, and said that the Cabinet was perfectly united on home and foreign questions.

In the Spanish Chamber of Deputies on Monday Señor Castelar made a speech attacking the Ultramontane Deputies as defenders of the temporal power of the Pope. He urged the Liberal Government of Spain to assist Italy in upholding the separation of the temporal from the spiritual power. He approved the recent circular of the Minister of Public Instruction authorizing the appointment of free-thinkers to professional chairs in the universities. He also declared that he would never vary in his devotion to republicanism, no matter how progressive in its policy, or how liberal in spirit a government established on other principles might be. He contrasted the spectacle of the French republic, growing ever stronger, with the monarchy of Portugal, threatened more and more by a revolutionary crisis. Señor Castelar's utterances are interesting as a contrast to the action of Señor Moret.

There has been a Cabinet crisis in Portugal. It is said to have been caused by some proposals made in council by the Ministers of War and Finance. Senhor de Mello is forming a new Ministry.

The Austrian Reichsrath reassembled on Monday. In the lower house the Minister of Justice presented a new Penal Code Bill. The Finance Minister submitted the budget for 1882, showing a deficit of 37,809,535 florins. 15,500,000 florins of this deficit is accounted for by the redemption of Treasury bonds and the construction of the Arlberg Railway.

The slight troubles between Austria and Italy, which grew out of Austrian comments upon the recent visit of King Humbert to Vienna, seem to have been smoothed over. The Italian Ambassador to Austria has withdrawn his request for his recall, which he had sent to his Government.

All the rivers in upper Albania are reported to have overflowed their banks, and large tracts of land are inundated. At Scutari the Bazaar even has been flooded, and several lives lost.

It is stated on good authority that Prince Bismarck intends to resign, owing to his defeat in the recent elections. It is also stated that the Emperor has, as yet, refused to consider his resignation, in hopes that some arrangement may be made by which the Ultramontanes can be persuaded to support Prince Bismarck in the German Parliament without asking for a repeal of the anti-Catholic laws. Bismarck, however, refuses to propose any such arrangement.

An imperial order has been issued in Russia appointing a special commission, under the Presidency of M. Koshanoff, a member of the Council of the Empire, for the purpose of reorganizing the system of provincial administration. The proposals contained in the order are regarded as foreshadowing important changes in the direction of local self-government, especially in the way of facilitating peasant representation in all provincial district councils.

It is semi-officially announced that the Russian Government will shortly grant a general amnesty to persons convicted of press offences.

Diphtheria, scarlet fever, and smallpox are devastating the centre and south of Russia. The severity of the diseases exceeds anything before known.

The Government of Egypt has sent a letter from the Khedive to the Porte thanking him for having sent the mission to Egypt, the effect of which has been to strengthen the relations between Egypt and Turkey.

The large reduction in rents made by the sub-commissioners under the Land Act have called out many remonstrances from the landlords, and it is thought that if such sweeping reductions continue, the landlords will unite and endeavor to hold the Ministry to the pledges for compensation which were given in the debate on the Land Bill.

The Marquis of Salisbury, in speaking at a Conservative banquet on Saturday, laid great stress upon the right of the Irish landlords to compensation. He said that the sub-commissioners had acted rather as executive agents of the Government than as judicial arbitrators. He also expressed strong distrust of the proposition, which was alluded to by Mr. Gladstone at the banquet on the Lord Mayor's day, to alter the rules of debate in the House of Commons. Lord Salisbury said that the change would render minorities powerless.

The Dublin correspondent of the London *Times* states that the experience of extensive land agents is that rents are being paid in Sligo, Roscommon, parts of Galway, Limerick, Queens County, and Kilkenny; but that in Wexford, Clare, Kerry, parts of Cork and other counties there is a general determination not to pay.

A conspicuous feature of the procession in celebration of the Lord Mayor's day, which took place in London on Wednesday last, was the American flag, which was preceded by a band playing the "Star Spangled Banner." This innovation was received with great enthusiasm by the crowds which thronged the streets.

Mr. Thomas Brassey, speaking at a banquet at Bristol on Saturday, said that the cordial relations between Great Britain and the United States formed a welcome addition to Great Britain's naval strength. He said that it was not the policy of the United States to maintain a considerable navy in time of peace, but that they were Great Britain's most formidable rivals on the sea. He added that the good feeling between the two countries had been cemented for ever by what had happened lately.

Mr. Daniel Grant, Liberal member of Parliament for Marylebone, in speaking on the land question at a large meeting in London on Wednesday, declared, "amid much cheering," that the growing thought in England was toward republicanism.

Messrs. Moody and Sankey, the American revivalists, have been preaching to immense audiences in the neighborhood of Newcastle, England. They will hold meetings in Durham this week.

Sir Patrick MacDougal has been sworn in as administrator of the Canadian Government during the absence of the Marquis of Lorne, who has gone to England.

M. Legru, President of the French Crédit-Mobilier, has arrived in Montreal. He says that a capital of $12,000,000 has been subscribed in France for investment in public and private enterprises in Canada. The head office of the company will be in Montreal.

The Legislative Assembly of New South Wales has expelled the Hon. C. A. Baker, late Minister of Mines, in consequence of the report of the committee upon charges against him in connection with the disposal of the compensation awarded to the Melbourne Mining Company.

The Mikado of Japan has issued a proclamation giving notice of the establishment in 1890 of a constitution, with a Representative Assembly. The troubles in the silk trade still continue. The American and European merchants appealed to Mr. Bingham, United States Minister, and Dean of the Diplomatic Corps, to interfere in the matter, but he declined. It is thought that the silk combination will break down for want of funds before long, and that then some compromise will be made.

TUESDAY, November 15, 1881.

THE ADMINISTRATION AND THE NEW YORK ELECTIONS.

The results of the elections in the State of New York are undoubtedly of some interest to President Arthur in forming his plans of administration. He does not belong to that class of public men to whom organized party support would be a matter of secondary importance. On the contrary, he is likely to regard the cohesion and success of his party as a thing of the very first consequence, especially since from the managing leadership of a local division of it he has, as partisans understand it, been made the official head of the whole. It was therefore confidently predicted several weeks ago that President Arthur, although his particular friends had suffered defeat in the Republican State Convention, would not only not employ any influence unfavorable to the candidates nominated by that Convention, but would sincerely desire the triumph of his party in his own State, in whatever shape the party might achieve it. There is no doubt that President Arthur did desire the triumph of his party, although his wishes for the success of some of its candidates may have been more ardent than for that of others. Now it turns out that the Republican party has triumphed, at least in so far as it secured, under not altogether favorable circumstances, a majority of votes for those of its candidates (with the exception of one) who were presented to the suffrages of the whole people of the State. But it turns out also that, while President Arthur's party has triumphed, that faction in the party with which he was most intimately identified has in the same election been overwhelmingly defeated.

There was an appearance of harmonious action in the support of the candidates for State offices. But the Republican managers cannot conceal from themselves the fact that in the elections for the Legislature Stalwarts and anti-Stalwarts "knifed" each other without mercy. Hence the singular result that, in a State where the legislative apportionment is rather favorable to the Republicans, the party obtained a majority of the general vote, but lost the Legislature. It is evident that, while the animosities of factions were strong enough to bring about this result, the result in its turn will be calculated further to inflame those animosities. In spite of the success of the State ticket, the family broil in the Republican party is therefore rather worse now than it was before the election. The Stalwart faction has, as far as its official representation is concerned, been reduced to a feeble minority; but it may be strong enough to wipe out at future elections, by merely staying away from the polls, the small majority by which the Republicans hold the State offices.

There is evidently a great field for the reconciler, nor will his task be a simple one. The antagonisms in the Republican party of this State seem to have an element of vitriol in them which is not likely to yield to smooth words and bland smiles merely. But what is to be done? To the school of politicians with which President Arthur was formerly identified an alternative of two methods of reconciliation would suggest itself at once: either to make one of the factions, by the exclusive bestowal of the patronage upon it, so strong that it might entirely subjugate the other, or to divide the patronage between the two, thus trying to satisfy them both. The first method would hardly appear practicable in this case, except to those determined to rule or ruin. President Arthur's sympathies are undoubtedly on the Stalwart side. But it is evident that the anti-Stalwarts have an overwhelming majority in the Republican party. To try by means of the patronage to subjugate a large majority to a dwindling minority, is a task which a President having the least regard for the existence of the party, as well as for his own personal ease and comfort, would scarcely undertake. It would unquestionably result in still fiercer animosities and perhaps a final disruption of the organization.

The other method, a division of the spoils between the factions with a view to satisfying them both, has been so recently tried and has led to such deplorable consequences that the confidence even of the professional manager in its efficacy may well have been shaken. To reconcile by a distribution of favors differences between two men, each of whom will regard a favor bestowed upon the other as an injustice and an affront to himself, is well-nigh hopeless. Admitting that some individuals may be reached by the patronage, it is certain that a large majority cannot be so reached, but will rather be offended by any "dickering" in offices. The schism in this State is past surgery by this sort of hackneyed expedients. It will yield only to a third method, which the old school of politicians will usually think of last if ever. It is, not to use the offices for political purposes at all, but to treat them as what they were originally intended to be—places of public trust, work, and responsibility, which have nothing to do with party politics; when they are so treated the factions in the Republican party will cease to be jealous of one another, for neither will have the advantage. And, further, to inspire the party with a renewed interest in great public objects, which will withdraw the minds of its members from little personal quarrels and bickerings, and make selfish ambitions and jealousies appear in their real smallness. The municipal campaign in Brooklyn has shown once more what the party is capable of when it aims at higher things than the mere possession of offices. Unless this remedy be applied, this year's apparent success of the Republican party will prove of little advantage to it.

MORE ABOUT THE CAUCUS.

The volunteers of the Eleventh Congressional district in this city are so much elated by their recent victory over the local boss and his "district association," that they are eager to form some kind of organization which will enable them to do the same thing again. This is by no means the first time that similar successes have led to similar desires and resolves, which have in the end come to nothing. As long as the district associations, as now organized and conducted in this city, are alone recognized by the State and County conventions, the volunteers will hardly be able to play any more important rôle in the nominating system than that of critics or objectors, or, in other words, exercise any power but the veto power. What they need, to exert a continuous influence for good, is participation in making the nominations; and this they cannot have without obtaining recognition from the superior bodies of the nominating system—that is, the upper conventions. There is not much chance of their getting this at present, because conventions have to recognize "the regulars"—that is, the organizations composed of those who make politics the leading business of their lives, and work at it day in and day out. As long as human nature is what it is, a worker like Mr. George Bliss, with all his frailties and imperfections, must find more favor in the eyes of those who manage parties than volunteers who take up arms only occasionally. It is on him and the like of him the party has to depend for the regular, steady monthly and yearly working of the Machine. He has all the advantage, in their eyes, over a reformer, which a man who enlists for five years has, in a general's eyes, over the man who enlists for six months and has to go home in the summer and fall to save his crops.

Moreover, State conventions, being mainly composed of men from the country, are slow to perceive the difficulties with which people who are striving after pure politics have to contend with in the cities in the matter of caucuses. The former, like Mr. Adin Thayer, of Massachusetts, whose pamphlet on the caucus we noticed last week, are only familiar with the caucus as a meeting of friends and neighbors to consider which of their own number they had best send to the Legislature or Congress this year. Of the caucus as a mob, managed by Jakes, Mikes, Barneys, Sols, and Guses, in which an upright and well-meaning man is a ridiculous object, whose efforts simply furnish "the boys" with fun, they know nothing. Nor do they know anything about caucuses, like that of the Eleventh district, managed as close corporations, to which admission can only be obtained by ballot, and which it is the natural object of those who are already within to keep as small as possible. All these things are strange and a little incredible to them. Mr. Thayer wrote his pamphlet apparently without ever having heard of them.

It is this ignorance and incredulity on the part of country politicians of their own party, which is now the great difficulty in the way of perpetuating such organizations as did justice the other day on Bliss and his pupils in the Eleventh district. We do not mention it for the purpose of discouragement, but simply as a piece of elucidation. It is not a reason for stopping work, but for working in a somewhat different direction. The question, in what direction, has been much discussed of late, probably nowhere more effectively than in a series of letters by Mr. Larned, a Buffalo editor and practical politician, who knows all about city caucuses, and is therefore worth listening to. He agrees, as every one must agree, with Mr. George Bliss, that in cities and all large centres of population there must be some process of [sifting those who ask to be allowed

to participate in making the party nominations; that is, there must be some means of discovering whether a man's connection with the party is such as to entitle him to participate. The Republican associations in this city refuse to accept previous support of the party as a sufficient test. They exact also a promise, which no intelligent moral being ought to make, to support future nominations; and they frequently refuse to admit persons on any test at all. Mr. Larned's remedy is to surround the nominating process with the same legal checks and guarantees as now surround the electing process; that is, there should be an election day for party nominations under precisely the same conditions as the election day for the final choice. The one serious objection to this, beyond the expense and trouble, which ought to be no objection at all, is that members of the opposite party would come in and help to nominate the other party's candidates. But the answer to this is that as nobody could vote twice without going to jail, a vote cast on the Republican nominations would be lost on the Democratic nominations, and therefore, as a general rule, and for all practical purposes, men would vote on the nomination in which they were interested, and which most interested their friends and fellows.

If this system, the mere outline of which we have here given, were in operation, the power of the bosses would cease, and the simple physical terror or dislike which now keeps "the wealth and intelligence" of the city away from primary meetings would cease too. At most city caucuses, an objector or critic of the programme has to be a big, powerful man, not afraid of fisticuffs, if need be, and not sensitive to ridicule or abuse, because the law is not behind him. Put the law, the police, and the courts behind him, and the puniest man becomes a lion, as we see at the regular elections. Until some such change is made—we do not endorse this one in all its details—the reform element must content itself with watching, and in serious cases with organizing opposition *à outrance* to bad nominations. But the goal of their striving ought to be the surrounding of the caucus with the guarantees which make the casting of his vote at a regular election as easy and simple a process for the respectable citizen as dropping a letter in the street box. What would be the effect on the vote of this city of giving up the polling-places to "workers," of both parties, whose proceedings would be outside the law or uncontrolled by the law? Would it not cut it down by one-half, or two-thirds? Would it not soon make elections a farce?

MONEY AT ELECTIONS.

We hear from Republican newspapers, after almost every election in which the contest has been close, of the shameful use of money by the Democrats. The *Tribune* of Thursday, in magnifying the success achieved by the Republicans in the State election, says it was achieved "in spite of the utmost efforts of the astute managers of the Democratic canvass, and in spite of the expenditure of almost unlimited sums" of money by them. Other good party papers tell the same story, and they tell it every year. If the Democrats win, they win through lavish outlay of money; if they are beaten, they are beaten in spite of the lavish outlay of money. It is a fact, too, that all over the Union, except in two or three States, such as Massachusetts, Michigan, and Iowa, the Democrats press the Republicans hard. They maintain their organization; they poll in most of the Northern States a vote nearly equal to that of the Republicans, and at the last two Presidential elections have come very near victory. This cannot be done without very heavy legitimate outlay, to say nothing of the illegitimate.

Now, how is this money procured? How has it been procured during the last twenty-one years? Certainly not by assessments on officeholders. The Democrats have no officeholders to levy on except in a few Northern cities, and it is only in New York that these are numerous enough and well-paid enough to contribute anything but a trifle to the campaign funds. What they can get from their officeholders in the smaller country towns is not worth mention. It must be remembered, too, apropos of this, that the most brilliant and hard-fought campaign ever made in the United States was that of the Republicans in 1860, which resulted in the election of Lincoln, when they had not a single Federal officeholder in any part of the Union to aid them with part of his little salary.

Now, if it be true that the Democrats are able to command money for political purposes in this way, as it is certainly true that in 1860 the Republicans had no Federal officeholders to levy upon, what becomes of the Republican argument in defence of assessments, that they are necessary for the conduct of Republican canvasses; that if the officeholders did not contribute, there would be no money in the campaign chest, and that odious as is this fleecing of one very poor class of the community for purposes which concern them no more than their neighbors, it cannot be safely dispensed with? Is it not ridiculous as well as absurd, in view of "the almost unlimited expenditure of money" by Democratic managers, to pretend that the Republicans cannot get along without extorting by intimidation small sums from poor men, which not one in a hundred can afford to pay without embarrassment or privation? Does not "unlimited expenditure" make the Hugh Gardner raid at the Astor House and the circular of the State Committee very humiliating as well as useless performances? If it were true that Republicans out of office would not contribute voluntarily the sums necessary for the defence of their principles at the polls, would it not show that public spirit had fallen so low among them that it was time they made way for men whose interest in politics is stronger?

The truth is, however, that probably twice as much money could be obtained from the Republicans for electioneering purposes as from the Democrats, if it was sought by the proper persons and under proper conditions. Republicans who can afford to contribute have, however, rarely so high an opinion of the managers as to give them large sums to be expended at their discretion. Republican merchants and bankers and professional men who have money to spend for politics think they can make better use of it than to give it to the Gardners and Dorseys, who are usually selected to display "executive ability" about election time. The Gardners and Dorseys, it must be added, like better to "squeeze" the clerks and letter-carriers than to state their case to independent men of business. If Republican committees openly repudiated all attempts to extort money from officeholders, as wrong in principle and baneful in practice, they would have no more difficulty in obtaining money from those who can afford to contribute it, than they had in 1860.

Of all the cries by which assessments on officeholders are defended, there is probably none so baseless and preposterous as the cry that this is the only way money for party purposes can be obtained. The truth is, and it is now a notorious truth, that the greatest danger to which all free countries are now exposed, arises from the facility with which money for electoral campaigns can be obtained. The growth of wealth has produced a very large class, formerly unknown, which has the habit of giving lavishly to all sorts of things, and which gives more lavishly to election funds than to most other things, because it enjoys the excitement of political contests. In England and France what is puzzling reformers to-day is not how to get money for campaigns, but how to prevent heavy expenditure at elections by rival party managers. The money, too, only comes in a small part from candidates themselves; it comes from rich men who want to see their own side win, and it comes most freely under systems like the English, in which the elections do not disturb the repose of a single small officeholder. It may be said, and is said here, that the Democrats contribute with the expectation of getting office if they win. But then if the offices they expect to get do not promise more on the average than $1,500 or $2,000 a year each, men who are anxiously and eagerly seeking "plums" of this sort cannot possibly contribute the amounts necessary for "unlimited expenditure." They are usually readier to borrow five dollars than to give it for any purpose.

In fact, the Republican persistence in the assessment abuse in the teeth of the obloquy it brings upon them, and of the numerous proofs of its needlessness which meet their eyes in every direction, is a striking illustration of the love of ruts which long possession of power generates.

SHALL THE NATIONAL DEBT BE PERPETUAL?

Our readers are aware that an attack is being organized upon the whole internal-revenue system, including the taxes on whiskey, beer, and tobacco. The movement is in the interest of the classes who are enjoying the benefits of a high protective tariff. These people are alarmed at the rapid diminution of the public debt, since its final extinction will lead to the reduction of duties on imports. They would prefer that the national debt should be perpetual, since in that case public attention would not be forced to consider the subject of curtailing the customs revenues. They have advanced a number of queer arguments in fa-

vor of making the debt one of the permanent institutions of the country. One is, that posterity ought to pay a part of the debt; another is, that if the bonds are paid off, the national banks will have no basis for their circulation; another is, that trust estates will go begging for safe investments, and courts will be destitute of adequate security for the funds of litigants; another is, that the public are groaning under the burdens of taxation. They have revived to some extent the notion that a national debt is a national blessing, which Mr. Jay Cooke sought, with indifferent success, to propagate at the close of the war.

By sweeping away the internal-revenue system altogether these persons would well-nigh accomplish the object of making the national debt perpetual. There would still be some surplus revenue, but it would be so small that the present generation and probably the next would continue to pay an interest charge on the money expended twenty years ago in putting down the rebellion. Such a fiscal arrangement means not merely that posterity shall pay a portion of the debt, but that the present generation shall pay it and posterity pay it again and again. To pay a thousand millions at the end of ten years with 3½ per cent. interest would involve taxation not exceeding $1,350,000,000. To pay the same at the end of twenty years would require $1,700,000,000, and at the end of thirty years $2,050,000,000, and so on. This is what the repealers of internal revenue are striving for.

There are certain taxes in the internal-revenue system which might be repealed to advantage. The tax on bank deposits is a tax on the business of the country in gross, being virtually a tax on sales. Deposits are the proceeds—the signs and evidences—of property sold. Consequently the same property may be and is taxed over and over again, according to the number of times it changes hands, and as often as the seller deposits the proceeds of the sale in a bank. The tax on banking capital ought to be repealed, because it tends to discourage the growth of such capital. Generally speaking, banking capital is capital put into a form to be immediately available, and those countries which are most abundantly supplied with it have the advantage of being able to make profits out of the changes constantly going on in the world's traffic—or, in other words, to make hay while the sun shines. The tax on friction matches ought to be repealed because it bears upon the poor more hardly than upon the rich. The tax on proprietary medicines and perfumes ought to be repealed on the ground of being a common nuisance.

Here, in our judgment, the raid upon the internal revenue ought to cease. The stamp tax on bank checks is paid only by the rich or well-to-do classes, and is scarcely felt by them. It is one of the most easily collected of all taxes—one of those which produce the largest yield with the least cost. The tax on distilled spirits ought to be adjusted to the point where it will produce the greatest amount of revenue, and then left undisturbed. It is doubtful whether the present tax of ninety cents per gallon is not too high. The prime cost of whiskey is not above twenty cents per gallon. A tax of ninety cents is equal to 450 per cent., and offers great inducements to illicit distillation. Probably fifty cents per gallon would yield more revenue than ninety. However this may be, it is a tax which should never be relinquished so long as we have a government to support. It is a tax not merely on a luxury, but upon the most depraving of all luxuries. The excise duties on beer and tobacco are also taxes on luxuries and should be kept in force.

The assertion that the people are calling for a reduction of Federal taxes is sheer fabrication. Where are the public meetings, the resolutions, the petitions which usually herald a popular movement and signify the desire of great masses of men for a change in the fiscal policy of the Government? They do not exist. Mr. Wharton Barker and his coadjutors in Pennsylvania are pumping in a dry well. They have not raised a gurgle of popular approbation. We can tell them what the people do want: they desire to have the national debt paid as soon as possible. So far from being shocked at the idea of having it all paid within ten years, they would be better pleased if it could all be paid within five. As the *Bankers' Magazine* pointedly argues, the best time to pay national debts is when the people are in the mood to pay them, for the repudiator and the demagogue always stalk in the background, ready to take advantage of hard times and popular discontent to raise a hue and cry against the bondholder. The argument for continuing the debt based upon the need of bonds to secure bank circulation is shown by the same authority to be frivolous, since Congress can easily prescribe other forms of security. As regards trust funds and estates of suitors which courts commonly require to be invested in United States bonds, it is only necessary to do what was done before the war. We made shift to get on without a national debt once and we can do so again. At all events, it is downright effrontery to ask the taxpayers of the country to make an annual contribution for the mere convenience of any class, whether banks or individuals.

CHILI, PERU, AND THE UNITED STATES.

The reply of Admiral Lynch to the letter of Don Garcia Calderon on the present relations of Peru and Chili deserves attention, especially from that portion of the press which has been urging on our eccentric Minister, Mr. Hurlbut, to prevent Chili from annexing any of the Peruvian territory. What Mr. Hurlbut has done, it will be remembered, is to make a formal announcement that it is a "principle of public right" that a war indemnity should be "agreed upon by the parties or determined by disinterested arbitration," and also to proclaim another "rule," that civilized nations cannot take an enemy's territory as a war indemnity without having previously "proved the incapacity or unwillingness" of the enemy "to meet the indemnity in some other form." Mr. Hurlbut produces these rules as if they were familiar maxims of public law, recognized all over the world, but the fact is that they have no existence. They are not to be found in any book on international law, and no victorious nation in settling the terms of peace has ever admitted their existence or been called upon by other powers to do so. Such warnings, however, coming from our Minister, must seem in South America to be a declaration by the United States, for if they are not, the South Americans would naturally ask, why in the world is Mr. Hurlbut allowed to make them?

There are no two opinions, of course, as to the wisdom and humanity of our original offer of our services as mediator in the South American troubles; but our services not having been accepted, and the war having ended in the defeat of Peru and its occupation by the Chilian army, we have obviously to choose between one of two courses—either to settle the terms of peace ourselves, or to let the victorious country dictate them. To adopt the plan of urging upon Peru the importance of taking a certain course with regard to Chili, after having made one unsuccessful offer of mediation, is to take about the very weakest position in the matter that we can; for the Chilians know now very well that we have no such interests in Peru as will lead us to take overt measures of intervention, and consequently they will regard all Mr. Hurlbut's pronunciamientos as exactly what they are—so much brag and bluster, political weapons of which the South Americans are themselves masters, and of which they thoroughly understand the scope and value.

The immediate dispute between Calderon and Lynch is one in which all the advantage as to facts and sense is on the side of the Chilian admiral. The function of government which Calderon is really anxious to exercise seems to be that of issuing paper money in the name of a country hopelessly bankrupt and in a condition of anarchy. But even if he has any other and better object, his attempt to argue his "Government" into existence with the commanding officer of an invading army who has actually declared martial law as far as his occupation extends, is so puerile that it is difficult to see how any looker-on can be taken in by it. Calderon's "Government" has no physical force of any kind behind it, and Chili has refused to recognize it, and the martial law declared by Lynch has superseded it in the capital of the country where Calderon wishes to carry it on. In order to get over these difficulties Calderon has had to invent a new theory of martial law, which Lynch very justly tells him has no existence except in his own brain. Martial law is simply the will of the commanding general. It supersedes all civil government, so far as he wishes it superseded, and consequently the only way to ascertain whether any civil government is left in existence is to ask him. To argue with him that martial law is not what he says it is, reminds one of the old argument by the lawyer of the unfortunate man who is locked up in jail to the effect that he cannot be put there.

Now, as we have said, we have a very remote interest in the difficulties of Peru. Our trade with her is insignificant; indeed, it has been for some time one of the standing cries of our press that the decay of American shipping had cut us off from the South American trade, and that all South American interests are

in consequence much more closely connected with Europe than with us. It may be said, indeed, without exaggeration, that while the legal ownership of the Peruvian concern is still vested in the Peruvians, the equitable interest by pledges of credit to secure bonds has been transferred to a body of European creditors. It does not seem to be generally known, but it is nevertheless true, that this strong European interest led two or three years ago to the formation of a scheme for the subjection of most of the financial functions of the Peruvian Government to the supervision of representatives of foreign bondholders—a step in the direction of a protectorate which, to any earnest advocate of the Monroe Doctrine, ought to have been far more alarming than the absorption of the whole country by Chili.

For these reasons we are still unwilling to believe that the strange performances of Mr. Hurlbut, by his open interference in the quarrel in the name of the United States, were authorized in any way by the State Department. The State Department would hardly undertake, after having had an offer of mediation between two countries refused, to dictate certain terms of peace as required by international law, leaving the international law to be simply invented by our Minister, while it is perfectly obvious that in the last resort we shall do nothing, but be obliged by the circumstances of the case to let the combatants settle the matter for themselves.

The strangest part of the whole matter is that there is supposed to be something intensely "American" in all these queer transactions, and Mr. Hurlbut is loudly applauded by a certain portion of the press for his vigor in Peru. But it is difficult to see why it should be considered especially "American" to place the United States either in an untenable or humiliating or irrational position. Vigor that leads to no practical result but talk, is generally mistaken by spectators for qualities which reflect credit on no one. If pronunciamientos like Hurlbut's in South America were backed up by force, if we were to tell Chili in so many words that we and not the Chilians must settle the terms of peace, and that a refusal to let us do so would be followed by war, our action might be open to the charge of wanton interference with our neighbors' affairs, or disregard of public obligations, but to think it very "American" and something to be proud of would be intelligible. It would be a formal announcement to the world that we were going to abandon the policy of peace and good-will to all the world which we have steadily pursued for a generation, and to enter upon one of aggression and interference for our own aggrandizement. A policy of "manifest destiny," backed up by ships and troops, might fill our hearts with delight; but "manifest destiny" on paper only will always in the end seem absurd.

BENJAMIN CONSTANT AND MADAME RÉCAMIER.

PARIS, Oct. 27, 1881.

MADAME LENORMANT, author of the interesting 'Souvenirs of Madame Récamier,' has just published a volume of letters addressed by Benjamin Constant to her aunt, Madame Récamier. A few of these letters appeared in 1849, a few weeks after the death of Madame Récamier, in the *feuilleton* of the paper *La Presse*, edited by Émile de Girardin. The two families of Constant and of Madame Récamier protested at the time against this publication, and the Paris court ordered the restitution to Madame Lenormant of the seventy-five letters which were announced for publication. Madame Lenormant judged that Benjamin's letters could now be published; but on the very day when her volume came out there appeared a protest from a member of the Constant family. We may therefore expect a new law-suit to begin; meanwhile we shall profit by the publication.

Madame Lenormant has prefixed to the letters a notice of Benjamin Constant written by M. de Loménie for his 'Gallery of Illustrious Contemporaries' (M. de Loménie married a daughter of Madame Lenormant). She adds only a few notes to this notice. She says that Benjamin Constant made the acquaintance of Madame Récamier at the house of Madame de Staël. He became more intimately acquainted with her in 1806, when Madame Récamier made a visit of two months to Madame de Staël at Coppet, on Lake Geneva. "Benjamin Constant," she says, "appreciated her better there, as he lived near her in the intoxicating (*enivrante*) existence which Madame de Staël made for her friends and guests by her fascinating wit and her kindness. However, Madame Récamier, confidante and often witness of the stormy scenes which sometimes disturbed the echo of these fine places, was only for Benjamin Constant the object of a distant admiration." The first letter which he addressed to her was dated 1807. The correspondence became active only in 1814, at the time when Napoleon I. was fallen and in exile on the Island of Elba.

Benjamin Constant had followed for a few years the fate of Madame de Staël. He had been married in 1808 to Charlotte von Hardenberg, in Germany, had spent several years in Germany with her, then returned without her to Paris. He found there again Madame Récamier, who had spent three years in a forced exile. He found also Madame de Staël, likewise returned from exile, much altered, but at the very height of her literary glory. Caroline Murat was very anxious to remain on the throne of Naples. She knew Madame Récamier, and asked her if she could recommend to her some eminent writer, who could in a pamphlet defend the *rights* of King Murat, and plead for him at the Congress of Vienna. Madame Récamier thought of Constant. She had been very well received at Naples in 1813, during her exile, and she pressed Benjamin Constant to undertake the task of defending the King and Queen of the Two Sicilies. "They spoke first," says Madame Lenormant, "of the destinies of a kingdom, then of old and dear memories; and he, while she spoke, forgetting the grave political interests confided to him, saw only the woman whose sweet voice penetrated him." He fell in love; he conceived the ambition of securing the love of Madame Récamier. He struggled for eighteen months, till she gently reduced him to friendship.

The volume before us is a collection of love-letters, but of the love-letters of a very eminent man. Sainte-Beuve said once that Benjamin Constant was a grown-up cherub; he had, indeed, always something of the *gaminerie* of Beaumarchais's *Chérubin*. His morality was the morality of a page; his emotions were as instinctive, his passion was as shallow, his tenderness was as feminine, his morality as loose. Madame Récamier was of a finer clay. She could not love Benjamin Constant; she could only love what she respected, and she had not much respect for the brilliant and changeable writer. She knew that his only real and constant passion was gambling, and that his whole life was constantly devoted to chance. He was not, in short, a safe man. In politics he was as fickle as in love. In the year 1813 he wrote an admirable pamphlet, "De l'Esprit de conquête et d'usurpation." It was an eloquent protest against the Napoleonic system of war and of conquest. He announced the fall of the French Empire as inevitable. When the Empire fell he offered his services to the Restoration, and wrote articles in its defence in the *Journal des Débats*. On March 19, 1813, when Louis XVIII. had already left the Tuileries in haste, when Napoleon, who had come back from Elba, was already at Fontainebleau, Benjamin Constant wrote a last article, in which, under his own signature, he said: "I will not go as a miserable transfugee, and crawl from one power to another. I will not cover infamy with sophisms, and mutter profaned words in defence of a shameful life." This article made a great sensation. A month afterward Benjamin Constant was a Councillor of State of Napoleon's, and took his part in the drafting of the famous "Acte Additionnel," which was a new Constitution given by Napoleon to the French people.

How did such a change take place? The correspondence shows that at the moment of the return from Elba, Benjamin Constant was engrossed with one idea: he wished to please Madame Récamier, to conquer her placidity, her godlike indifference. He became chivalrous, hoping thus to astonish her; he fought the last battle of the Bourbons; he remained last on the battle-field; he shot his Parthian dart at the returning Emperor—the man who had again the fate of the world in his hands. As M. de Loménie well says:

"At the moment when the soil was trembling under the feet of the Emperor, when all Paris was in a state of stupor, Benjamin Constant, this *blasé* man of forty-eight, was occupied with a single object: he looked in this great upturning of things for some means of making himself beloved. What could he do—defend the cause of the Bourbons? That was not enough; others defended it also. There are young and brave men who, at the first news of Napoleon's landing, take their swords and declare themselves ready to die under the gates of Paris. He will do better: he will take his pen, and, when the game is lost, will strike a last blow, do a thing which can condemn the author of it to proscription or to death, and thus make himself interesting."

Madame Récamier, who knew Constant well, cannot be held responsible for his conduct; she did not ask him to make himself "interesting"; she probably understood what was coming. She can only be accused of coquetry; she could not help being a great coquette; she was a virtuous *Célimène*. When you read the letters of Constant you cannot help thinking of Madame de Maintenon, who sent away Louis XIV. "toujours malheureux, jamais désespéré." Louis XIV. ended by marrying secretly Scarron's widow; Benjamin Constant could not marry Madame Récamier—he was already married.

When Napoleon entered Paris, Constant asked Lafayette to conduct him to the American minister. He left for Nantes, and was on the point of embarking for the United States, when suddenly he changed his mind. He could not bear the idea of placing the Atlantic Ocean between himself and the "délicieuse" Juliette, the chaste Helen of our times, the beauty of beauties, the woman who was the incarnation of the most divine Madonnas of Raphael. After five days spent in Nantes he returned to Paris, without stopping. Napoleon, who had fathomed the soul of Benjamin Constant, understood at once that he could use him in his attempt to create a constitutional government. He flattered his

vanity, and asked him to draft the model of a constitution. Benjamin Constant did not understand that Napoleon only wished to gain time, to amuse France with liberalism in order to get new levies more easily. He became the prisoner of Napoleon I., as Émile Ollivier afterward became the prisoner of Napoleon III. In his pamphlet, published in 1820, on the Hundred Days, he says:

"I have been reproached for not having sacrificed my life for the throne which on the 19th of March I had defended. It was because on the 20th of March I lifted my eyes; I saw that the throne had disappeared, and that France was still there. To isolate one's self from the government which Bonaparte instituted was to expose France to three chances equally disastrous: the military dictatorship in all its violence; the complete enslavement of France by foreigners; the counter-revolution, with all its fury. It must be remarked, besides, that one of the three chances did not ensure us against the other two. It was necessary, in order to escape from these dangers, to join the new government, and to limit and regulate it. It was no small sacrifice to make for men who had resisted Bonaparte or stood aloof from him for thirteen years."

Alas! words cannot undo facts, or words which are equivalent to facts. The conduct of Benjamin Constant in 1815 was fatal to his reputation. Madame Récamier was not an ardent royalist, but she was a royalist. Her society was chiefly composed of royalists; they all looked upon Constant as a traitor. Madame Récamier was kindness and gentleness itself, so that Benjamin Constant did not, like Adolphe, the hero of his novel, turn his love into hatred; but he abandoned her society, he contented himself with communicating with her from time to time. She never dropped him completely. He left for England in 1815, returned to France in 1816, and became one of the most active members of the Chambers between 1819 and 1827. His private life was a constant disorder: he was covered with debts. Laffitte and Louis Philippe helped him in 1830. He died on the 8th of December, 1830, leaving the reputation of a man who had much talent and no character, nervous, uneasy, full of egotism—not the calm and robust egotism of the self-satisfied worshippers of instinct, but an egotism which would have all the emotions of virtue, of self-sacrifice, of love, of moral greatness. His speeches will be forgotten; his letters to Madame Récamier and his novel 'Adolphe' will show exactly what he was.

THE LIBERAL TRIUMPH IN GERMANY.

BERLIN, November 1.

THE late elections for the Reichstag have turned out much more favorable to the Liberal cause than the most sanguine could expect. The Liberal under-current had daily gained more strength from the attacks of the Chancellor and his satellites in the press, and so the Conservatives and middle parties have lost at least forty seats, and all the chosen tools of the Government policy have been swept from the surface. Although it is as yet impossible to state exactly the proportion of the different parties, this much is certain, that an alliance with the reactionary and Catholic parties in the Reichstag can do no harm, and that the united Liberals are stronger than the two together.

According to our constitution, a candidate must have an absolute majority of votes in order to be elected. Whenever, therefore, there are more than two candidates competing for the same seat, the two obtaining the largest vote must submit to a new election. This time about a hundred such "test elections" (*Stichwahlen*) must take place. As they must be held within ten days after the official count of the first election, we can only learn the exact complexion of the next Reichstag on November 10 or 11. It is, however, already a settled fact that Bismarck's candidates and the most obnoxious Conservatives have been defeated—for instance, young W. Bismarck, whose only merit consists in being his father's son. In several towns where young Bismarck appeared before his former constituents, he was met with enthusiastic hurrahs for his opponent. The author of the present protective tariff, Herr von Varnbüler, makes room for a Würtemberg Democrat, a prominent champion of compulsory guilds; a Herr von Helldorf has to yield to a Liberal judge; and Von Kardorff, an ardent admirer of Mr. Carey, and Mirbach, an agrarian leader, will have to undergo a second election.

Bismarck's official candidates, too, succumbed to the general scorn and contempt of the electors. In Bremen, for instance, Herr von Kusserow, a young and ambitious diplomatist, obtained only 560 votes out of about 13,000, which triumphantly elected Herr H. H. Meier, a leading merchant of Germany and the President of the North German Lloyd Steamship Company. Von Kusserow had expressly been ordered by his master to Bremen, to praise the tobacco monopoly and to promise subsidies to the shipping merchants of that port, which on several former occasions had been flatly rejected by them. Herr Bosse, a director of the Prussian Board of Trade, had been despatched to Duisburg, a large manufacturing town in Rhenish Prussia; but in spite of the protective predilections of that district, this gentleman, too, remained in a hopeless minority, as the people would not submit to have their representative dictated by the Government. Against Herr von Forckenbeck, the Mayor of the city of Berlin, another of Bismarck's advisers, a Count Limburg-Stirum, a gentleman with a great mustache, but with little brains behind it, likewise had to run as official candidate; but the obedient servant has been deplorably beaten, and Forckenbeck was not only elected with 3,000 majority in this district, but also in two others. In Lauenburg, in which a large part of Bismarck's estates is situated, his special candidate was also defeated. Adolf Wagner, Professor of Political Economy at the University of Berlin and an intimate adviser of the Chancellor, suffered a thorough defeat in five different districts. The electors distrusted that gentleman, not only for the reason that he is in the habit of changing his opinions, but for the further reason that he too eagerly supported the Chancellor's vague schemes. He is the same State Socialist who some years ago advocated the idea that the Government should buy all the real estate in the large cities in order to prevent every kind of speculation in houses and houserents.

To give a few more instances: Bismarck's endeavors to elect his friends and defeat his most obnoxious opponents, failed in Danzig (Rickert elected), Hirschberg (Bunsen), Meiningen (Lasker), Berlin (Virchow), Wiesbaden (Schulze-Delitzsch). Of newly-elected members, I mention Dr. Friedrich Kapp, of Berlin, who has reconquered his old district, Salzwedel-Gardelegen; Herr Hobrecht, the former minister of finance; Eberty, the syndic of the city of Berlin and successful antagonist of young Bismarck—all Liberals; and Professor Arnold, a Conservative of Marburg. In my next I shall be able to give you exact figures. The Reichstag itself will be convoked on or about the 20th instant. It is presumed that its first session will be a very short one, as it will confine itself to the examination and passage of the budget.

To recapitulate, the result of the last elections shows that the people have done much better than was expected, and that politically they have proved riper than was anticipated. The reactionary period had reached its climax, and progressive tendencies will again prevail. All earnest men who do not consider politics a mere business job or speculation begin to take more hopeful views of the future, and appreciate the important change just brought about by the elections. It is impossible that the anti-Semitic and other reactionary elements should longer be held together. Terror-stricken, they try to make up by braggadocio for what they have lost in confidence and success. The so-called Social Christians, a mean set of demagogues under the leadership of a court preacher, a certain Stoecker, also a defeated candidate,* have already lost the support of their former wealthy Conservative friends, who appreciate the cruel fact that this kind of political business does not pay. The same official and officious press organs which did their utmost in backbiting and stirring up the worst passions, now desert their own camp, and confess that their attacks have only advanced the Liberal cause. Their sole consolation is that the Chancellor will soon dissolve the Reichstag. If he should do so—I for my part believe that he will not—he will get a majority which is still more opposed to his economical schemes. The election, burdensome as it may be, has diffused a large amount of knowledge among the people, who have become more enlightened as to their own interests, and no longer believe in the liberal promises which have been made, but cannot be kept. Each succeeding election will meet with fewer prejudices, and will consequently offer better chances for a Liberal majority. † † †

Correspondence.

MR. ASTOR'S OPPONENTS.

TO THE EDITOR OF THE NATION:

SIR: Is it not mean of the *Tribune* to poke ill-natured sarcasm at its own defeated candidate for Congress in this way?

". . . Mr. Astor went into the fight with heavy odds against him. It is always dangerous for men of great wealth to expose themselves to the suffrage. The passion of envy is the most deeply planted and most insidious of the human heart. It exists often unknown to the men who harbor it, and takes on the form of conscience, public virtue, and a desire for reform. Many poor young men voted against Mr. Astor because he was reputed to be the heir of vast riches; many polo-playing youths of his own set voted against him because he preferred public life to polo and them."

Besides the envious creatures to whom the *Tribune* alludes, there are, seriously speaking, a number of Republican voters in Mr. Astor's district whose feelings toward him are of so kindly a nature that they sincerely hope he will no longer let his unselfish patriotic yearnings interfere with his private pleasures.

ONE OF THE LATTER.

NEW YORK, Nov. 9, 1881.

THE VINDICATION OF CEDARSWAMP.

TO THE EDITOR OF THE NATION:

SIR: I have thus far, I believe, understood the *Nation's* jokes. This may plead for me in my present perplexity about the suggestion, at the close of the lively article in your last issue, entitled "The Vindication of Cedarswamp," of incarceration as a remedy for the "practice of putting real characters into books." Being disposed to take the suggestion seriously, and for "books" mentally substituting "print," I became, as I pursued my study of your columns,

*He has finally been returned from Minden.—ED. NATION.

deeply anxious about the personal liberty of the publisher of the *Nation*. I am not a lawyer, and am therefore not tempted to point out to the injured parties the singular resemblance between their wrongs and those of Miss McLean's victims, even if you were indiscreet enough to permit it. The temptation did beset me, however, as I proceeded and found a reviewer almost complaining of an author who has put real characters into his book for generally withholding "names, localities, and dates," and quite forgetting to blame him when he does not withhold them. In another review, furthermore, the necessity of yielding to the popular demand for information about the private lives of distinguished persons is, under protest, conceded.

The truth is, as these references to the very columns in which Miss McLean is sentenced illustrate, literature must have its portrait-painters, and why may they not introduce their subjects into well-executed *genre* pictures? The use of one's acquaintances in a novel, where it cannot be assumed that all they do and say is literal fact, is surely not more objectionable than the use made every day of both characters and names in newspapers, magazines, books of travel, published correspondence, and the like. Of course grave wrong may be and is done in this way, and good taste would often expunge passages in which nobody is really injured, but we cannot spare the literary artists who must paint from models if they paint at all. And I may appeal to your own discriminating criticism of 'Cape Cod Folks' in vindication of its author's instinctive wisdom in relying more on those powers of description which she possesses in so marked a degree, than on a creative faculty which is at all events not much developed.

Of course the offence for which a civil process is begun is not the use of character, but of names. If this be the ground of your proposal to send the author to jail, the proposal is still painful, but ceases to be perplexing. Nevertheless, I have little doubt that a good criminal lawyer, with some help from Miss McLean's "youth and experience," would carry the jury in her favor. It has, I believe, been publicly stated that her own title for the book was set aside for the one actually used. It would seem, therefore, that she was not altogether a free agent in the matter of publication. Perhaps the real names of her characters, which she might naturally have employed for the sake of convenience in the first draft of her story, would have disappeared along with other blemishes had she had her own way.

There is evidently a comic side to the conspiracy against the public entered into by author, publishers, lawyers, and "peasants" for their own emolument, which "the learned and benevolent counsel" are about to reveal. All the same, it is to be hoped that your reflections will be soberly laid to heart by others than those whose misdeeds or misfortunes have directly occasioned them. X.

November 8, 1881.

[The perplexity of "X" must have arisen from a failure to observe the distinction between criminal and civil proceedings for libel referred to in our article. If Miss McLean has committed libel (as to which we have no opinion one way or the other), for the purpose of punishing her and deterring others from repeating the offence, incarceration would be a far better remedy than such peculiarly farcical civil suits as the "Cedarswamp" suits promise to be. The personal liberty of the publisher of the *Nation* is in no danger, because he never commits libel.—Ed. Nation.]

Notes.

Messrs. D. Appleton & Co., heretofore merely the publishers of the *North American Review*, will cease to retain even that connection with the quarterly after the close of the present year. "In view of recent articles that have appeared in it," they say; meaning, no doubt, the Black-Ingersoll symposium.——J. B. Lippincott & Co. have in press 'Indian Tribes of the United States,' their history, antiquities, etc., by Francis S. Drake. The work will make two volumes, 4to, illustrated.——"German Philosophical Classics for English Readers and Students" is the title of a series to be published early next year by S. C. Griggs & Co., Chicago. Prof. Geo. S. Morris, of Johns Hopkins University, will have general editorial supervision, with the assistance of President Porter, of Yale, Dr. W. T. Harris, of St. Louis, Prof. John Watson, of Kingston, Canada, Prof. Robert Adamson, of Manchester, England, and other scholars. "Each volume will be devoted to the critical exposition of some one masterpiece belonging to the history of German philosophy," embracing only the works of Leibnitz, Kant, Fichte, Schelling, and Hegel, and filling ten or twelve volumes, of uniform price.——Houghton, Mifflin & Co. are about to publish 'Biographical Notes and Personal Sketches of James T. Fields'; a new edition of Mr. Fields's 'Yesterdays with Authors,' containing ten fine steel portraits, some after originals not heretofore copied in black and white; Mr. Henry James, Jr.'s 'Portrait of a Lady,' which is on the eve of completion in the *Atlantic;* and an additional supplement to Baxter P. Smith's 'History of Dartmouth College,' having reference to the late dissensions in the governing corps. ——T. Whittaker promises his 'Churchman's Almanac' by the first week in December, with a complete parish list corrected to November 15. ——'Around the World Tour of Christian Missions,' by W. H. Bainbridge, and 'Round the World Letters,' by Lucy Seaman Bainbridge, are announced for the present month, by D. Lothrop & Co., Boston.——T. B. Peterson & Brothers will bring out a new edition of 'Helen's Babies,' by John Habberton.——The fourth and last volume of the new edition of Jamieson's 'Etymological Dictionary of the Scottish Language' is now in the press of Alexander Gardner, Paisley, Scotland, and those who desire to subscribe to this important reprint—in which, by the way, the supplement has been incorporated with the leading text—will soon have no longer an opportunity.——Mr. Christern will receive subscriptions to the chromo-lithographic fac-simile of Frau Mauro's 'Mappemonde,' now publishing, as a souvenir of the third International Geographical Congress, by F. Ongania, Venice. The original is preserved in the Royal Library of St. Mark's. The copy will be 4.48 metres square.——The library of Baron Taylor is for sale—the richest dramatic collection since Soleinne's, which cost 500,000 francs. Baron Taylor's is estimated at 25,000 francs, which does not appear dear, seeing that there are 600 manuscript plays, mostly autograph, 2,100 volumes of foreign plays, and 100 volumes devoted to the plays performed at the Opéra Comique alone. It is said that when Scribe's widow wished to publish a complete edition of her husband's plays she was obliged to borrow several manuscripts of Baron Taylor.——That the Germans are a nation of philosophers is strikingly illustrated by the fact that of Reclams's twenty-five-cent edition of Kant's 'Critique of Pure Reason,' ten thousand copies were sold in one year.——Recent issues of *Notes and Queries* have contained bibliographical papers on the 'Fight at Dame Europa's School,' a pamphlet which had an extraordinary success ten or eleven years ago.——The *Revue Politique et Littéraire* of October 8 has an article by M. Léo Quesnel on the later years of Lope de Vega's life after he had become a familiar of the Inquisition. On the testimony of Montalvan, it has been assumed generally that on joining the priesthood Lope reformed and settled down to a reputable way of living. By the aid of newly published letters M. Quesnel shows that the old age of Lope did not differ much in morality from his rather stormy youth. Incidentally he cites an order of a Spanish literary society to the winner of one of its prizes to omit all reference to Lope's later frailties.

— 'The Whittier Birthday Book,' compiled by Elizabeth S. Owen (Houghton, Mifflin & Co.), is of all the series thus far the best justified and the aptest. No poet of his rank has in our time so studded his verse with historical allusions; none has, all things considered, kept so high a level in his "occasional" poems; and none has done so much to embalm the memory of his contemporaries—Webster, Sumner, J. Q. Adams, Garrison, Pierpont, Follen, Howe, Stearns, Fremont, Torrey, Bayard Taylor, Lincoln, and more than we can mention. Finally, Mr. Whittier's besetting fault, diffuseness, is happily corrected in a book of extracts, though undeniably the fine memorial stanzas to Daniel Neall suffer by being cut in two. We wish that room could have been found for the effective translation from Pastorius, a perhaps solitary example of the poet's powers in this direction.——August Kluckhohn's discourse on Queen Louise, of Prussia, mother of the present King, delivered in the Schrannenhalle at Munich on March 22, 1875, and afterward revised for publication in the Virchow-Von Holtzendorff 'Sammlung gemeinverständlicher wissenschaftlicher Vorträge' (Berlin: C. Habel, 1876), has been skilfully translated by Elizabeth H. Denio, instructor in German at Wellesley College, and printed at the Riverside Press, Cambridge. The local color has been taken from it by suppressing the author's patriotic "we" and "our"; and the notes have not been retained. The special translation of Körner's verse, by another hand than Miss Denio's, is not remarkable. The German pamphlet was accompanied by a superb Albert-type of a portrait of the Queen in pastel. The heliotype based upon the former has not been successful, and it would have been worth something to procure the Albert-type or the admirable engraving from it given in *Harper's* for July, 1880. The familiar full length of the princess descending a flight of stairs is made a frontispiece of the translation, and may be compared with similar views in No. 1 of Spemann's new *Vom Fels zum Meer*.——Prof. Wm. F. Allen, of the University of Wisconsin, has published (Boston: Ginn, Heath & Co.) a very neat and scholarly edition of the 'Agricola' and the 'Germania' of Tacitus. These two little works of the greatest of the Roman historians are complete in themselves, and the Latin language offers nothing more worthy of a place in a college course. Prof. Allen's commentary embodies the results of the latest investigations of the best German scholars, so far as the narrow limits within which he has confined himself permitted. The plan of triple grammatical references to the grammars of Allen and Greenough, Gildersleeve and Harkness, which was noticed with approval by the *Nation* some months ago in a review of Prof. Allen's 'Introduction to Latin Prose Composition,' is also applied in the present work. It is thus made equally convenient to those having any one of these grammars.——To any one desirous to become acquainted with Hamilton's theory of Quaternions we can recommend the 'Elements of Quaternions,' by Prof. A. S. Hardy of

Dartmouth College (Boston: Ginn, Heath & Co.). For those who have never studied the subject, this treatise seems to us superior both to the work of Prof. Tait and to the joint treatise of Profs. Tait and Kelland. Having mastered its 230 pages, they will be well prepared, if their enthusiasm has not become exhausted, to attack Hamilton's huge volume of 'Lectures,' or his almost equally ponderous and still more abstruse 'Elements.' We say this on the supposition that they have access to these works; they have, we believe, long been out of print.

—Messrs. J. B. Lippincott & Co. announce in their last *Monthly Bulletin* that they "have been unusually fortunate in their relations with the younger novelists of Great Britain and Europe. They discovered 'Ouida.'" Shall we follow the practice of the naturalists and name this species of author *Ouida lippincottii?* We have always been inclined to pity the unfortunate doctors who were the first to notice the one a curvature of the spine, the other an ailment of the kidney, and had their names linked for ever to Pott's disease and Bright's disease. Messrs. Lippincott appear to think differently; they envy the discoverers of diseased organs, and boast of having discovered a diseased author. We wish they had let her alone. Fortunately, they have other claims to the gratitude of their countrymen than that of having introduced "Ouida."

— The first of the larger and more costly holiday publications to reach our table is Jacob von Falke's 'Greece and Rome' (Henry Holt & Co.), of which Mr. Wm. Hand Browne, the accomplished librarian of Johns Hopkins University, has made a capital translation. The scheme of the work is identical in the two parts—namely, to give a summary view of the political history of the state, and of its art and literature, while dwelling at much greater length on the life and manners, in accordance with the author's special knowledge and training and his relations to the Museum of Art and Industry at Vienna. General notions can alone be conveyed in an undertaking of so great a scope, and the text hardly needs to be criticised by any other standard than that of its readability. This quality it undoubtedly has along with its authority in matters archæological, and at the same time a leisurely perusal is enforced by the size of the volume, and still more by the great store of wood-cuts scattered through it, illustrating every phase of antiquity and including not a few landscapes. These engravings are not as a rule of the highest order, and their average is not equal, say, to those which superbly illustrate Ebers's 'Egypt'; still, they are far from mediocre, many fill an entire page, and all are well selected. The book is beautifully manufactured, and yet perversely a printer's error conspicuously mars the table of contents, where the headings of the first and third Grecian sections are interchanged.

—Curiosity can no longer be piqued by the announcement of a work illustrated by Gustave Doré, and before opening the costly edition of Milton's 'Paradise Lost' just issued by Cassell, Petter, Galpin & Co., one knows exactly what to expect from the designs. They are hardly to be called interesting even, and, what is more, the engraver's art in them has been cheapened along with the draughtsman's. Indeed, one feels that Doré's colorless drawings need a decided change of interpreters to invest them with anything like freshness. There is much relief, therefore, in turning from these monotonous plates to the varied styles involved in the illustrations to Chatto and Jackson's 'Treatise on Wood Engraving' (J. W. Bouton). This is the second or Bohn edition of 1861, and it is doubtful if there will be another, except in the sense of the reprint before us; and yet this is likely to remain the standard work on the subject in the English language. No other enterprise could more clearly evidence the great advance made in the past twenty years in the mechanical production of fac-simile relief-plates. What engraver of the present time would ever undertake, except for his own practice, to recut the work of his predecessors? Yet this is what Jackson did, with unavoidable shortcomings. Let any one critically compare the originals of the vignettes on pp. 487, 488 (the upper one), and 500, for examples, with the copies, and he will see that the essence has gone out of them. The composition and story conveyed remain, but the mastery of drawing and of each graver stroke is lost utterly, and yet a dozen dollars nowadays would procure us absolute reproductions, in metal, and our improved press-work would practically obliterate, in the printing, the superiority of the wood-cut. It may be well to remark, for the generation now coming on the stage, that this treatise also contains a chapter of instructions in the art of wood engraving, and that the historical portion of course includes a discussion of the invention of printing. On every account, therefore, the book is a most desirable one to own.

—The place of honor in the current number (ii., 7) of the *American Journal of Philology* is occupied by Dr. Fitzedward Hall's "On the origin of '*had rather go*' and analogous, or apparently analogous, locutions." Addressing himself to scholars, the author does not scruple, as in his previous writings of this kind, to overweight the text with notes, illustrative, critical, and polemic; though, as regards the last adjective, Dr. Johnson and Landor are the chief sufferers, and call for as little sympathy as any two dogmatists that could be named. The historical deduction of "had rather" is from "have liefer," and the time at which the former expression first appeared in English literature Dr. Hall finds to be, in his extensive reading, about 1471, when Sir John Fortescue made use of it. As usual, Dr. Hall is pertinently discursive, and touches many points of interest. For instance, apropos of the use of *have* in the sense of "hold," "deem," "regard," "rate," etc., which constitutes the basis of the locution under examination, it is observed in a footnote: "The Biblical '*had* in derision,' and '*had* in reverence,' present no difficulty to the run of readers; but it is all but certain that 'I pray thee *have* me excused' is generally misunderstood, and by the uneducated as well as by the educated." Shaksperian criticism intervenes in the remark that *lief* occurs otherwise than in the positive only in the "Second Part of King Henry VI.," of which the authorship is held in doubt by commentators; that the passages in this Part containing the forms *alderliefest* and *liefest* "are in the old play of 1594, on which it is founded"; that Robert Greene, among the poet's early contemporaries, "has the adjectives *lief*, *liefer*, *alderliefest*, and *aldertruest*," and that one might suspect his hand in a form of the "Second Part" which is not known to have survived unless in the passages indicated. Finally, some statistics are given, showing the gain of "had better" over "had rather" in the best writers during the past eighty years. Macaulay uses "had better" six times; "had rather" only three. And in the pages of Jane Austen, Lord Byron, George Eliot, Matthew Arnold, Leslie Stephen, and W. H. Mallock Dr. Hall finds "had better" twenty-nine times; "had rather" only twice. Cowper's ratio, on the contrary, was four to seven.

—"The untimely death of the late Sidney Lanier removed from the sphere of American letters one of the rarest spirits and most accomplished and lovable of men, just as his work was beginning to receive a full national recognition, and to yield a livelihood for his family, whose future welfare was to him the object of his tenderest solicitude." Such is the opening paragraph of a circular signed by Messrs. George William Brown, W. H. Perot, E. G. Daves, Lawrence Turnbull, and William Hand Browne, of Baltimore, and expressing the sentiment of a commemorative meeting held on October 22 in that city, under the auspices of the Johns Hopkins University, in which Mr. Lanier held a lecturer's chair. The best memorial to his genius and character his friends conceive to be a fund to ensure the support of his widow and the proper education of his children, and this it is proposed to raise, "the income to be paid to his widow during her lifetime, and the principal at her death to be equally divided among his children as they respectively attain or may have attained their majority." A review of Mr. Lanier's literary productions would show a singularly wide circle of minds in which, it is to be hoped, a lively sense of indebtedness inheres for his poesy, his musical disquisitions, his guide to the Southern paradise for invalids, and finally his graceful and scholarly abstracts of Froissart and the Arthur legends for children. The local Baltimore committee, consisting more than one-half of ladies, embraces the best-known names in that cultivated community; while the coöperating committee finds eminent literary or financial representatives in all parts of the country. Funds may be sent to Messrs. Alex. Brown & Sons, bankers, Baltimore, or to any of the sub-committee first named.

—Census Bulletin No. 269 is descriptive of the density and area of settlement of the country at the date of the census. The settled area is defined as that having a population of two or more to the square mile, the portions outside of that being peopled, if at all, by a few scattering graziers, hunters, or prospectors. Under this definition, the settled area is mainly comprised in one large body, stretching from the northern to the southern limits of the country, and from the Atlantic coast to the plains. In this body is comprised ninety-five per cent. of the population, the remainder being in detached bodies of comparatively small size, the largest of which is on the Pacific slope, in California and Oregon. Within this great settled area, however, there are several detached regions which contain practically no inhabitants, as in the northern part of Maine, the Adirondack region of New York, southern Florida, and northern Michigan, Wisconsin, and Minnesota. For purposes of discussion, this settled area is divided, according to density of population, into five groups—viz., that having 2 to 6 inhabitants to a square mile; 6 to 18; 18 to 45; 45 to 90; and 90 or more, to a square mile. The first of these may be regarded as a region newly reclaimed from the wilderness, peopled only by cattle-raisers and scattering ranchmen. It is represented mainly in the frontier States and Territories. Some of the poorest farming regions of the older States also fall into this class, which is accordingly represented to a certain extent in the region of the Appalachian Mountain system, and in the swampy region on the Gulf coast. The second group indicates an agricultural region. In the older States it presupposes rather unfavorable conditions of surface, soil, or climate, and in the newer States an early stage of settlement. The third group, 18 to 45 to the square mile, indicates successful agricultural pursuits, with perhaps some minor manufactures. As is to be expected, this group is the predominant one in the Southern Atlantic and Gulf States, and, owing probably to an admixture of manufactures, in the north-

ern part of New England. The fourth group indicates the existence of manufactures and commerce. It is found very largely represented in southern New England and the Middle States, including Ohio and Indiana. The fifth group indicates a very advanced condition of industry. It is only in the States of New Jersey and Rhode Island that this group is more largely represented than any other, although it is found in nearly all the Northeastern States.

—The following table shows the present area in the different groups, compared with that in 1870:

	1870.	1880.
Total area of settlement	1,272,239	1,569,570
2 to 6 per square mile	240,807	384,820
6 to 18 "	363,475	373,890
18 to 45 "	470,529	554,360
45 to 90 "	174,036	229,010
90 and above "	18,302	24,550

Notwithstanding the constant passage of lower groups into higher, by increase of population, yet the lower groups have in every case made gains. This is particularly the case in the lowest group, 2 to 6 per square mile, owing to the immense migration to the extreme West during the past five years, and the consequent reclamation of great areas of public land. During these years the inroads upon the public domain have been unprecedented in extent. In the second group the increase has been but slight, but in the higher groups it has been very great. In the bulletin the analyses of the settled area are extended back to the first census in 1790, and to the different sections of the country, from which are deduced many important generalizations, which, however, it is impossible to discuss here. It concludes with a table showing the extent of the different classes of the settled area in each State.

—After an absence from this country of more than two decades Madame Adelina Patti again appeared before an American audience on Thursday night, at Steinway Hall. Although Madame Patti was born at Madrid, she lived in this country from her fifth to her seventeenth year—those years in which an artist's character is formed; and New York has the honor of having discovered in her the greatest Italian operatic singer of the present generation. That Patti has not been able to make up her mind to leave Europe and return to this country until now is not to be wondered at, since the sums she has been able to demand for every appearance in any foreign capital have been so fabulous that she could hardly hope for greater profits in this country. In part, also, she seems to have been deterred by an uncommon dread of the discomforts of a sea voyage; and as if to punish her for this timidity, the Atlantic has seldom behaved so badly as during the week she was tossed about on it. Probably the inclemency of her voyage, and the disagreeable weather we have had since her arrival, have somewhat affected her voice. At any rate it was not so absolutely perfect in every detail on Thursday as it has been heretofore. Her highest forte notes were somewhat metallic and forced, and her lowest notes a trifle out of tune. But the remaining notes of her register, which is one of extraordinary range, are still superb and in perfect order, hardly betraying the least influence of age. The ordinary epithets applicable to a voice—such as sweet, sympathetic, powerful, flexible, expressive—sound almost too commonplace to be applied to Patti's voice at its best, as it was when she sang the valse "Ombra Leggiera" from Meyerbeer's "Dinorah," and "Home, Sweet Home." Her voice has a natural sensuous charm, like a Cremona violin, which it is a pleasure to listen to irrespective of what she happens to be singing. It is a pleasure, too, to hear under what perfect control she has it: how, without changing the quality of the sound, she passes from a high to a low note, from piano to forte, gradually or suddenly, and all without the least sense of effort. Indeed, her notes are as spontaneous and natural as those of a nightingale, and this, combined with their natural sweetness and purity, constitutes their great charm. It is a pity that so fine a voice should belong to one who for years has made such unworthy use of it. It is well known that Patti's *répertoire* at the present day includes only about half a dozen of the stalest operas, which she continually repeats wherever she goes, like a living music box. She has none of the ambition of a great artist who longs to employ her talents in new fields, and to show her devotion to art by reviving by her efforts undeservedly neglected old operas, or making the world familiar with the works of the composers of the day. Her sole aim and object seems to be to accumulate money, and as long as she succeeds in filling a hall by the announcement that she will sing a few florid and popular songs sandwiched in between the stale and unprofitable performances of a lot of third and sixth-rate musicians, all the ardent aspirations of her artistic soul are fully satisfied.

—It is with extraordinary satisfaction, therefore, that we record the fact that Patti and her managers have at last come to grief through their impertinent presumption that they could fill the capacious Steinway Hall six times in succession with an audience willing to pay the unheard-of price of ten dollars for the privilege of listening to such a shabby and miserable programme as was presented on Thursday. Besides the two selections already mentioned, Madame Patti sang the cavatina "Ah forse è lui" from "Traviata," and took part in the terzett "Qual voluttà" from Verdi's "I Lombardi." But apart from these and the encores she had to add, there was nothing in the whole programme which a musician would have given a button to hear. Such artists as Patti has brought along can be picked up in this city by the score at any musical entertainment. Not one of them, excepting Nicolini, has ever been heard of here or elsewhere, and there is no probability that they ever will be heard of again after these concerts. Signor Nicolini and most of his colleagues, indeed, served as a useful contrast to Madame Patti's art. But Patti is too great an artist to need contrasts, and she has now discovered, to her grief, that New Yorkers are not fond of them. Before the first performance the management was compelled to reduce the price of the tickets of one-half the floor from ten to five dollars. Yet even this device failed to fill the house, so that about one-quarter of the seats remained empty. The truth, is Patti should never have appeared in a concert hall, but on the stage, where she properly belongs, and where she has won her laurels. We have an opera here at present which stands in great need of a prima donna, and we are perhaps not far wrong in conjecturing that we shall hear Patti at the Academy of Music before she leaves this country. It is of course natural that she should deny any such intentions, as that would injure the prospects of her concerts. Meanwhile, what we have said here must not be interpreted as implying that the first Patti concert was a failure. It was, as far as Patti was concerned, an immense success, the applause during the whole evening being so demonstrative and so genuine that Patti, who is used to such demonstrations as perhaps no one else besides Liszt, could hardly conceal her agitation on several occasions. In appearance she is still attractive, although she has lost the charm of her early days. Her theatrical inclinations revealed themselves in her change of dress during the concert, and in the coquettish way she ran from the stage before she had quite finished her last note. The audience included many persons well known in society and letters, but the general appearance was rather "mixed," and the display of toilet was by no means equal to what it would have been on a similar occasion in London, Paris, or St. Petersburg.

—Brahms, Tchaikoffsky, Beethoven, and Liszt were the composers represented on the programme of the first concert of the Philharmonic Society. If this programme was sufficiently modern to satisfy the most advanced taste, we may at once add that the execution of it was so finished that the most critical audience in the world would have been delighted with it. Brahms's Tragic Overture, which opened the concert, is in almost every respect inferior to its companion, the Academic Festival overture, and has been generally recognized as such in those German cities where it has hitherto been produced. The latter, thanks to the student-songs introduced in it, has some clear and tangible ideas on which the mind can dwell with satisfaction, while the Tragic Overture is one of the most vague and intangible of Brahms's compositions, consisting almost entirely of glittering generalities, without any conceivable reference to the spirit of tragedy. It might be of use as an introduction to a commonplace, bombastic historical tragedy in a theatre, where it would be more in place than in a concert hall. A pleasant contrast to this overture was formed by Tchaikoffsky's second pianoforte concerto, op. 44. We are quite in accord with Dr. von Bülow, who has more than once referred to the refreshing influence on jaded ears of Tchaikoffsky's compositions. They are modern in conception and execution, and although in general suggestive of German workmanship, yet receive an additional charm from the Russian characteristics with which they are flavored. The new concerto is one of the most interesting of recent works of its class. It is not intended as a mere bravura piece, but is animated by a poetic spirit one hardly looks for in a concerto. In the first movement there are several good motives and some harmonic progressions of original effect; in the melodious second movement a violin and 'cello obligato are added to the piano, thus making a sort of triple concerto; while the third, which is often used as a means to show off the possibilities of the pianoforte, fully sustains the interest of the other movements. Of Madame Schiller, who played the pianoforte part, we can say that her execution has always been good, and, although her touch in the staccato chords seemed occasionally hard, she soon entered into the poetic spirit of the work in a way which showed that her emotional powers have greatly matured since last we heard her. She was repeatedly recalled. Of Beethoven's Fourth Symphony, which if not equal to the "odd numbers" is perhaps the best of the "even numbers" among his symphonic works, nothing new is to be said besides stating that the performance was simply perfect, revealing the minute care Mr. Thomas bestows on every bar of the music. It is perhaps not generally known that when this symphony was for the first time played at a concert for the benefit of its author, in 1807, it was preceded by his first three symphonies—a programme which would have delighted the soul of Hans von Bülow. A spirited performance of Liszt's two episodes from Lenau's "Faust" brought Saturday's concert to a close. This work reveals the influence both of Berlioz and of Wagner, between whom Liszt is a sort of connecting link, but is still of sufficient originality to claim a place of its own at a concert. The general spirit of Lenau's poem is strikingly reproduced, and if the musical form of this composition seems at first disjointed and chaotic,

careful study and attention gradually reveal the fact that there is as much method in this madness as in the often tiresome thematic treatment of the older masters.

MR. EMERSON'S PHILOSOPHY.

Ralph Waldo Emerson. His Life, Writings, and Philosophy. By George Willis Cooke. Boston: James R. Osgood & Co. 1881. 8vo, pp. 390.

TRANSCENDENTALISM is so rapidly becoming a thing of the past that already its history has been written; and now in this volume before us we have an account of the life and writings of its chief exponent while yet his friends can gather round him in his honored old age. There seems something premature, something of restless Yankee overhaste about it; but the truth is that the whole bent of the thought of the day is toward a scientific positivism so entirely alien to transcendental idealism that that philosophy seems already antiquated. We have been forced reluctantly forward by the movement of thought in England to a distasteful but unavoidable positivism: Darwin has replaced Coleridge, and we weigh facts instead of ideals. The old way of thinking is outgrown; and as we look back upon that philosophy which a generation ago we greeted as the rising dawn, it seems only an electric aurora, an illusive northern light—beautiful, indeed, in the past night's gloom, but fading in the clearer morning light of the science of today. We admire its delicate grace and beauty, and praise the aspiration which, however fitful, flamed ever upward toward the zenith in pulsations of luminous flame. But we cannot find its foundations in the earth or harness it in our looms; it has a ghostly air of unreality about it; and we do not clearly realize that, although it was not all we thought it to be, yet it was nevertheless a bright manifestation of a spiritual force as old as the human soul—an idealism that in some shape is a permanent element in the mental life of humanity.

To this generation, which has forgotten the personal influence of Margaret Fuller and the group of enthusiasts that gathered about her, transcendentalism is personified in Emerson, and we may probably expect that the judgment of the future, looking mainly to the literary remains of the members of the group, will so regard it. Mr. Emerson's was the most marked literary individuality, not only in his own generation, but in the century. The descendant of eight generations of New England ministers, his profound insight into abstract speculations, his freedom and nobility of thought and high poetic imagination, his peculiarly impressive and original style, his fine bearing, and the deliberate high-bred oratory whose unaffected realism and repressed enthusiasm bore the listener irresistibly along—all combined to make Ralph Waldo Emerson the leader of a movement which, although really but a temporary reaction from a stronger current, seemed then to be rising to an overwhelming tide of success. Transcendentalism was certainly the great movement of the first half of this century here, and its influence upon us, both for good and ill, is still very plainly perceptible. Yet it is not very generally understood except by its votaries, the rest of the world thinking it too abstruse or unintelligible to deserve much attention. This seems very mistaken when we remember that transcendentalism is no American idiosyncrasy, no novel product of a virgin soil. It is the oldest and proudest of human philosophies, and we can follow it down almost unchanged, except in the coloring given by the spirit of each successive age, from its appearance in the earliest records of India, through the glories of Grecian speculation, the Neo-Platonic school, and the despairing nobility of Roman stoicism, even in the dark ages not losing sight of it entirely among the advanced thinkers. Reviving with civilization, and showing itself characteristically in mediæval mysticism, we see it mathematically demonstrated by Spinoza, shaped into orthodoxy by Swedenborg, carried to the uttermost extreme of speculation by the German idealists, and taking more disguises than one in modern thought, not only among the idealists, but the positivists.

The peculiarities of its transcendental form are little more than we should expect from the selective influence of modern surroundings. The key to both the oldest and the newest idealism is the conception that underneath all the changing phenomena of this noisy world, below all the jarring strife of atoms and men, lies a single unchanging First Cause—an infinite eternal and perfect substance, a divine noumenon, of which all earthly phenomena (whether material or mental) are alike manifestations, and without which they would not for a moment exist. It is only just to say that Mr. Emerson grasped this thought with more intelligence and imagination than any of our other thinkers. To him it was no dark unknowable, but the eternal source of life and light, illuminating and giving real existence to everything. Nature and the human soul were alike informed by it, and governed by the same universal laws, nature being embodied mind. Her laws were progress and righteousness, and humanity purified and elevated itself by yielding wholly to her. Each soul was independent, individual forever—its own guide, its fate and freedom both self-determined; but bound to subordinate its selfish desires to universal law, and becoming thus divine; opening itself to the ideal, and in its loftiest moments submitting itself to the direct inflowing of the Oversoul in a tide of ecstasy that merged the human in the divine. Thus all are, or may be, inspired; Christ was one of a series of prophets, the noblest of whom is yet to come in the eternal progress; while all religions are alike imperfect and alike useful to the wise man, whose mind is ever open and receptive to everything of good that floats by from whatever source.

These are the main features of transcendentalism, and their peculiarities were due far more to the selective influence of the age than to any force of logical development; logic being, indeed, a weapon for which the transcendentalist had little liking. If Emerson rejected the dogma of the personality of the Divine Substance with the mystics, so do Herbert Spencer and Matthew Arnold. If he adopted the Neo-Platonic view of the unity of the Godhead, and saw in Christ only one of many gifted ones with whom the Oversoul had direct communion, we must remember that the impulse of Unitarianism was then passing over both continents. His doctrine of intuition and inspiration is the living element of Quakerism and Radicalism to-day, as it has been of every religious revival. The revolt from church forms and return to the individual consciousness of absolute right and wrong, has been the essence of every great religious movement, as Froude showed in his fine essay on Calvinism; and individualism had then received a new impulse from the success of our democratic institutions. Even Mr. Emerson's view of nature as the expression of infinite wisdom in laws applicable alike to mind and body, Eastern in its origin, was in close accord with the nature-worship that had been so strong for half a century both as a political force and a poetic inspiration.

If, however, we cannot allow that the main points of transcendentalism were really new, it does not follow that Mr. Emerson was a copyist. On such subjects novelty is an impossibility, and it would be an anachronism to expect it. But his was a mind of high poetic imagination and of great original power, both of insight and expression, and he never overtaxed it or printed anything poor. He made these great conceptions his own, made them his so thoroughly that the stamp of his personality is plainly to be seen on every product of his mind. His poetic conception of abstractions reaches, indeed, the loftiest height of imaginative genius. Yet we must acknowledge not only the unnecessary harshness and obscurity of his style, but that he worked within such narrow limits and by such faulty methods that his genius will seldom be truly realized except by his devotees. But it is none the less there; and it is necessary to appreciate the poetical nature of his mind in order to do justice to his prose, which, indeed, is often more melodious than his verse. In a time of small men and wide intellectual barrenness, Mr. Emerson raised the thoughts of his hearers high above earthly things, appealed to their nobler imagination, and set again before them the eternal beauty of the Platonic idea. To many a mind it was a wonderful awakening and a permanent impulse. Its morality might have been insufficient for the common herd (instinct is a dangerous guide and universal laws of nature are weak safeguards); but it did not appeal to them, and the intellectual class to whom he did address himself were stimulated, and not maddened.

On the other hand, with the credit must go blame. Mr. Emerson's method of work was very faulty, and its defects he imparted to his followers—defects which, while they assisted the immediate spread of his views, tended finally to bring upon them a not altogether undeserved discredit. His course of study was miscellaneous and not overbroad, and he skipped everything he did not agree with, thus keeping his mind in a very narrow track, and he refused to discuss the views of those who opposed him, or even to reconcile the logical contradictions of his own theories. Though his later volumes were as well written as his first, they revealed no progress of thought. Nothing showed more plainly his wonderful mental constitution than that he could preserve his just mental equipoise for nearly half a century under such an enfeebling regimen. His favorite mode of teaching was from the lecture platform, that ready-made mental clothing-shop where the customer receives what appears to be a complete intellectual outfit without an effort of his own. His manner of composition was by noting down miscellaneous ideas as they occurred to him from time to time, and assorting them under their several heads as they accumulated. Then when he had a lecture to deliver he put together the several paragraphs upon that subject and trimmed and corrected them with great care, producing, however, a work that was more a string of sibylline oracles than a complete essay, and, notwithstanding its brilliancy and beauty, lacked the ordered strength and clear convincing power of a theme written to express a definite thought from which the minor points naturally followed as corollaries or illustrations. The student was taught to put himself in a negative attitude, with his mind merely receptive, as if culture could come without work. The whole tendency of the teaching was to put passive intuition in the place of thought and vague imagination for definite conception. Everything coöperated to this end, and his followers quickly caught his method without his genius. It was so pleasant to seem to learn without any mental effort, to be able to depend on one's own insight without regard to conflicting facts or irreconcilable arguments; so satisfactory to be able to

solve every question of the universe by laws too vague to cause any trouble at closer quarters. Dreamland is a charming spot, and here the dreamers were taught that everything outside was unreal.

In the hands of the master the instrument worked not ill. On the great questions of the time—slavery and war—Emerson spoke boldly to the point. But much of the feeble talk of our own day about inalienable rights to vote or to circulate improper books, and the like, substitute indolent assertion for sound thought, and rest on the strength of transcendental teaching. And we can observe a wider influence on contemporary literature. While our living novelists and poets may well hold their own, our thoughtful literature is wofully weak. Instead of works of deliberate, careful, exact investigation, such as England produces every year by the score, we have Orphic sayings and aspiring philosophic speculations, as loose and flimsy in thought as they are obscure in form. Much of this is due to our want of culture and lack of thorough criticism, but more, we think, to an evil habit of thought for which transcendentalism is fairly responsible.

The execution of the book before us is very good. It is convenient in size and print, and has a useful index. The author has studied his subject thoroughly, and expressed himself clearly. He hardly pretends to be judicial, and makes little attempt to point out the weaknesses of his hero or the defects in his philosophy. He goes evidently too far once or twice in praising Mr. Emerson's scholarship and comparing his observation of nature to Tyndall's or Darwin's. But the study of Mr. Emerson's philosophical relations to early thinkers is very good, and Mr. Cooke is generally just in his appreciation and happy in his praise. The great fault of the book is that it is not very interesting. It does not give enough of the attractive personal flavor of Mr. Emerson's home life, or impress the reader sufficiently with his peculiar individuality as a man—omissions explainable in part, no doubt, by the courtesy due to a living friend, but nevertheless dulling the edge. The account of the philosophy is full and sound, but it has neither the contagious poetic fervor we expect from the disciple, nor the incisive comment of the critic. Thus, with all its value, it is rather hard reading, and will hardly remove transcendentalism from its former position—the delight of a small and diminishing body of enthusiasts, the object of a contemptuous but not unkindly ignorance on the part of the rest of the world.

DE AMICIS'S SPAIN.

Spain. By Edmondo de Amicis. Translated from the Italian by Wilhelmina W. Cady. New York: G. P. Putnam's Sons. 1881.

THIS interesting work relates to the author's tour through Spain during the brief period when Amadeus I. was reigning, or rather, "residing at Madrid as a distinguished visitor." No longer heir-presumptive to the throne of Italy, the Duke of Aosta had accepted General Prim's repeated offer of the crown of Spain, and, elected by 191 votes of the Cortes, had entered Madrid amid great rejoicings in January, 1871; in the early part of 1873 he resigned the crown and retired to his own family and home. He preferred to say with Don Rodrigo,

> "Ayer fui señor de España,
> Y hoy no tengo una almena
> Que pueda decir que es mia,"

rather than possess a mimic sovereignty over an unwilling people. It was during this period that our author set out, "one rainy morning in February," to go to Spain, leaving "his mother and his empty room and his little library" behind him at Turin. His book contains a succession of "word pictures" cleverly drawn. We have read it through once, but there remains photographed on our memory a succession of scenes and "interesting situations" which make the book like one of those charmed works of childhood, a part of our stored-up picture-life.

Arrived at Marseilles, he had to pay "deux sous pour les Prussiens," in vindication, we suppose of France's right to exclude the Prince of Hohenzollern from the Spanish throne, and suffer defeat in consequence; and then away to Perpignan and across the Pyrenees. And now fairly in Spain, his first question was: "Well! what is your King doing?" "Está reinando," was the reply; turning round and seeing "the proprietor of the inn looking at the ceiling," he immediately changed the subject. At Barcelona he was greeted by a waiter who accompanied him to his room, with the inquiry whether "he had finished from arriving," and whether "he had descended this very hour from the iron road"—questions intended to show the speaker's knowledge of Italian. The explanation is that, at Barcelona, there are a great number of hotel waiters, café employees, cooks, and servants of every description, who are Piedmontese, and speak, with Italian travellers only, a horrible jargon of French, Italian, Castilian, Catalan, and Piedmontese, just to show that they have not forgotten their native tongue.

Catalonia is perhaps the most agreeable province of Spain, and the people are energetic and enterprising. At Barcelona our author is impressed with "the villas, little palaces, and factories which dispute the ground, jostle each other," and rise in succession along the surrounding heights until they form a great wreath round the city. "The people work and prosper," he adds, "and Barcelona flourishes." The Catalans of Barcelona appear to look with as much contempt on the Castilians as these do on the "Gallegos," or the Galician peasants, who do all the hard work that the Castilian is too proud or lazy to do. It is amusing to read of the Catalan shopkeeper who replied to the question, "What he thought of the character of the Castilians?" by saying that, "In his opinion, it would be a good thing for Catalonia if there were no railway between Barcelona and Madrid, because business with that people corrupted the character and customs of the Catalans." But the little episode told us by our author about the Barcelona barber is still more characteristic. We will give it in his own words (p. 20):

"I found a furious Carlist in a barber who, discovering from my pronunciation that I was a compatriot of the King, tried to draw me into a discussion. I did not say a word, because he was shaving me, and a resentment of my national pride might have caused the first bloodshed of the civil war; but the barber persisted, and not knowing any other way of beginning the argument, he said at last, in a gracious tone: 'Do you know, Caballero, that if there arose a war between Italy and Spain, Spain would not be afraid'? 'I am perfectly convinced of it,' I replied, out of regard for the razor. Then he assured me that France would declare war with Italy as soon as Germany was paid; there is no escape from it. I made no response. He was silent for a moment, and finally said maliciously: 'Great events will occur before long!' and so the matter ended."

From Barcelona to Saragossa across the Montserrat is not a very long journey, but it supplied our author with one or two pleasing encounters. At the foot of the mountains a lot of schoolboys crowd into the carriage, going to the convent of Montserrat on an excursion. "Is this the first time you have made an excursion to Montserrat?" he asks, in his own language, of one of the little fellows. The boy was silent for a moment, and then replied very slowly: "I—have—already—been—there—several times." The father of the boy had lived several years at Naples, and so the lad had picked up a little knowledge of Italian; but now "the train stopped, the priest bowed, the boys dashed out of the carriage. I put my head out of the window to salute my little friend. 'A pleasant walk,' I cried; and he, detaching each syllable, replied: 'A-di-o.'" It is not hard to agree with the author that trifling incidents like these are the greatest pleasures experienced in travelling.

The town of Saragossa seems to have been built "for a battle"; and it has certainly fulfilled its destiny. "I felt once more all the emotions which the narratives of the horrible siege of 1809 had caused me. I ran from street to street with increasing curiosity, as if in search of the traces of that gigantic struggle which astonished the world." At length our author enters the Church of Nuestra Señora di Pilar, the terrible Madonna from whom protection and courage were sought by the squalid crowd of soldiers, citizens, and women, before they went to die on the bulwarks. The shrine of the Virgin is surrounded by a crowd of kneeling worshippers. Not a rustle, not a murmur is heard; the life of the crowd seems to have been suspended. Even he who does not believe is forced to fix his eye upon the object on which all are gazing, and the course of his thoughts is arrested in a species of anxious expectation.

"Oh, for a sound of that voice! I thought; oh, for some apparition, even if it were only a word or a sight that would turn me gray from terror, and make me utter such a shriek as was never before heard upon earth, so that I might be freed for ever from this horrible doubt which gnaws at my brain and saddens my life!"

The portent was not granted, and our author leaves the cathedral and proceeds to quiz the pretty little faces at the windows. He did not meet, indeed, with any types of that beauty properly called the Spanish—"the deep tint and the dark eyes full of fire"; but at least, we may hope, he forgot for awhile his gnawing doubts and embittered life.

Passing by the descriptions of Burgos and Valladolid, we find in our author's accounts of the bull-fights and cock-fights of Madrid vivid pictures of a people's amusements. He devotes forty pages to a description of the first; it is a striking and powerfully-worded account of a detestable scene of cruelty. To have visited Madrid, however, and not devoted his Sundays to the circus, would have been folly; and as we now "know as much about it" as our author, we gladly allow him "to keep silent about the matter." Nevertheless, to see disembowelled horses running across the path of a bull maddened with pain inflicted by *banderillas* planted in its neck, while the beast, "with foaming nostrils, bloodthirsty eyes, neck streaked with blood, stamps the ground, struggles, strikes the barrier, demands revenge, wishes to kill, thirsts for a massacre," and all the time more *bandarilleros* advancing, more horses struggling in pools of blood, wounded, bleeding, maimed, galloping round in "phrenzy"—all this may give rise on the part of the spectators to a sort of pleasurable excitement for the time, but it is nevertheless not quite human or, one would think, *tolerable*, to lovers of fair play. But the bull-fights sink into insignificance when compared with the scene described as a "cock-fight." The horror, however, is rather in the description than in the thing itself, and the recollection of that "victorious cock pecking at the wounds, digging out the eyes, hitting the bare cranium of its antagonist, as if it wished to pick its victim to pieces without killing it; at times, when the poor thing [*i. e.*, the dying bird] was motionless for a moment, the victor looking down at it with the at-

tention of an anatomist, at times moving off with the indifference of a grave-digger, then dashing at it again with the avidity of a vampire, pecking at it, sucking it, torturing it with fresh vigor"—this recollection still haunts us with its minute details of revengeful cruelty like a bloody nightmare.

Space does not allow us to follow the traveller through the tortuous streets of Toledo, or to visit with him "the forest of columns" in the Cordova mosque; suffice it to say, the interest of the book lags nowhere. It will repay, and more than repay, the time, or the cost of the time (where time is money), spent in reading it. And for those who have not the opportunity of travelling, nor the time for reading heavy books of history or research, this volume will supply the place of actual experience or the acquirement of special knowledge, and also afford genuine pleasure and delight.

The translation of the book is, on the whole, a faithful one, and pleasant to read. The frequent repetition of the idiomatic "*one* never can tell," "*one* hardly knows," and so on, is rather tiring, and might be easily avoided; but otherwise the translation runs freely and easily from first to last, and in some parts is evidently accomplished in entire sympathy with the marvellous descriptive power of the original.

CAMPAIGNS OF THE CIVIL WAR.

Campaigns of the Civil War. The Outbreak of Rebellion, by John G. Nicolay. From Fort Henry to Corinth, by M. F. Force. New York: Charles Scribner's Sons. 1881.

THE Prussian staff account of the war of 1866 appeared in 1869; the first instalment of the history by the same staff of the war of 1870-71 made its appearance in 1872, and the nineteenth and last instalment of this great work, which has no rival in military literature, has been published during the present year. Our Civil War ended a year before the first of the German wars, but we have as yet no history of it which is universally recognized as authority; the unfinished work of a foreign visitor—the Comte de Paris—being the nearest approach to it which we have yet had. This singular deficiency cannot be accounted for on the ground of lack of materials. Of personal memoirs, histories of regiments, papers read before historical societies, etc., there is a great abundance; and, beyond all this, there is a mine of wealth in the War Department Records, which have now been printed for office use as far as 1864, and arranged in such form that they can readily be consulted by any responsible writer, although only three volumes of the ninety composing the series have as yet been published.

To supply this deficiency, the Messrs. Scribner have undertaken to publish a series of volumes, each treating of a single campaign, and the whole forming a history of the war. With but two exceptions, the authors who have been announced are all well-known officers, who served in the campaigns which they describe, and some of them, such as Generals Humphreys and J. D. Cox, held high command and achieved a national reputation. The exceptions are in Pope's campaign, of which probably no participant could write with impartiality, and which has therefore been consigned to Mr. John C. Ropes, of Boston, a well-known military student and writer; and in the semi-political introduction, which was entrusted to Mr. Nicolay, the private secretary of President Lincoln. All things considered, therefore, we have every right to expect that these volumes will give a clearer view of the operations of the war than has yet been afforded; and they must be judged by the highest standard of historical literature. Of second-rate histories we have had already more than enough, and there is no excuse for the appearance of any more.

Of the two volumes which have just appeared, the first is entitled 'The Outbreak of Rebellion,' and in it Mr. Nicolay tells how the Southern States left the Union; how the national flag was fired upon; how the North responded; how both sides skirmished on the border, and, finally, came into pitched battle at Bull Run. He tells it—as it appears in his mind—admirably well. That is to say, he narrates those events, and those only, which are worth remembering; his style is never dull, often brilliant, always clear and concise; he speaks directly and to the point; and whether we agree with his opinions or not, he gains and holds our undivided attention.

The manner in which Mr. Nicolay discusses the causes of rebellion will necessarily give rise to much controversy. He says:

"Directly and indirectly, the South had practically controlled the Government during its whole existence. Excited to ambition by this success, she sought to perpetuate that control. The extension of slavery and the creation of additional slave States was a necessary step in the scheme, and became the well-defined single issue in the Presidential election. But in this contest the South for the first time met overwhelming defeat. The choice of Lincoln was a conclusive and final decision, in legal form and by constitutional majorities, that slavery should not be extended; and the popular vote of 1860 transferred the balance of power irrevocably to the free States."

This no one can gainsay; but such calm and judicial statements are the exception, not the rule, in his book. The key in which his story is pitched is fairly indicated by the following:

"The discouraging tone of these answers [to Governor Gist's letter] establishes, beyond controversy, that, excepting in South Carolina, the rebellion was not in any sense a popular revolution, but was a conspiracy among the prominent local office-holders and politicians, which the people neither expected nor desired, and which they were made eventually to justify and uphold by the usual arts and expedients of conspiracy."

The word conspiracy appears on every other page, and the tone in which the quick succession of disunion acts is described is everywhere one of utter contempt and scorn; so that one would gather from what he says that a few bold leaders had carried six millions of freemen into rebellion merely to gratify their own selfish ambition. That the apparent Union sentiment at the South was real, hearty, and genuine—that is, inspired by any higher motive than prudence—is very doubtful. As late as December, 1860, Floyd "still avowed himself a Unionist"; at the Georgia Convention Stephens pleaded hard for the Union; so with hundreds of others. Yet Stephens, in his speech, "declared that if Georgia seceded he should bow to the will of her people." This is the kernel of the whole matter; the South was so inoculated through and through with the destructive doctrine of State Supremacy that it could not possibly have any real Union sentiment. It hesitated at disunion, as all people hesitate at a step of momentous importance, the results of which cannot be foreseen; but people everywhere were ready to follow their State. Public opinion at the South was not heartily in favor of disunion, but it was in that lame and impotent condition which Mr. Nicolay ascribes to Mr. Stephens, and from which the descent to rebellion and ruin was easy indeed. Therefore, we think that Mr. Nicolay gives undue prominence to the acts of the Southern leaders, intolerant, overbearing, scheming, and unscrupulous as they undoubtedly were; that he overestimates the force of Southern sentiment in favor of the Union; and that he entirely fails to bring into sufficient prominence the underlying causes which had been gathering force for many years, and but for the existence of which no conspiracy could have succeeded in creating the mighty conflict of 1861-65.

In describing the fall of Sumter, the uprising of the North, and the assembling of troops at Washington, the author is much happier; and he gives us a lifelike picture of the stirring events of those anxious days of April, 1861, the relative importance of which he justly estimates as follows:

"In comparison with the unmurmuring endurance that trudged through the Yazoo swamps, and the unflinching courage that faced the dreadful carnage of the Wilderness, later in the war, this march of the 'Seventh' was the merest regimental picnic; but it has become historic because it marked a turning-point in the national destiny, and signified the will of the people that the capital of the Union should remain where George Washington planted it."

Equally good is the account of the battle of Bull Run. General Scott, judging from a military standpoint, was of opinion that it was injudicious to attempt more with the three-months' volunteers than to garrison Washington and hold the Border States, and that offensive operations must await the arrival of troops of longer service. But "the highly excited patriotism of the North, eager to wipe out national insult and vindicate national authority, was impatient of what seemed tedious delay. . . . It saw rebellion enthroned in the capital of Virginia; it saw a numerous Union army gathered at Washington; the newspapers raised the cry of 'On to Richmond!' and the popular heart beat in quick and well-nigh unanimous response to the slogan." An offensive movement on Manassas was therefore determined upon, "at a council of war at the Executive Mansion, on June 29," and, once determined on, General Scott gave it all possible aid. The battle, as all know, was well planned, and it was fought with stubborn determination, though the men on both sides lacked that confidence in themselves which is the result of practical experience in war or other affairs. Success favored the Union troops during the morning and until two o'clock in the afternoon. Then, as their further advance was arrested, the tide began to turn. "Lacking long drill and discipline, they acted upon individual judgment and impulse, rather than as organized bodies merely executing the orders of their officers." Finally, at half-past four, the remainder of Johnston's army, together with Early and Ewell's brigade, fell upon the exposed right flank of the Union line, and then "the battle came to a speedy termination by a sort of universal consent—a realization and acknowledgment of coming defeat pervaded the whole army, and found instant expression in increased disorganization and immediate movement toward a general retreat." The panic and flight described by various writers existed more among the camp-followers and sight-seers than among the troops; still, the latter were so disorganized that it was found to be impossible to rally them at Centreville, and they rapidly moved on till they reached Washington, a footsore and hungry mob.

"It is in its political aspects that Bull Run becomes a great historical landmark. To say that the hopes and enthusiasm of the North received a painful shock of humiliation and disappointment, is to use but a mild description of the popular feeling. This first experience of defeat, or recognition of even the possibility of defeat, was inexpressibly bitter. Stifling the sharp sorrow, however, the great public of the Free States sent up its prompt and united demand that the contest should be continued and the disgrace wiped out. Impatience and over-eagerness were chastened and repressed; and the North reconciled itself to the painful prospect of a tedious civil war all the more readily because of the necessity of bending every energy to immediate preparation on a widely extended scale."

Judge Force's volume treats of the early operations in the West, and, though called 'From Fort Henry to Corinth,' its "preliminary" chapter recounts at wearisome length the movements of Price and Curtis and Van Dorn in Missouri. Though every page bears evidence of careful research—of an earnest desire to adhere strictly to truth, to avoid opinions, and steer clear of controversy—yet it must be confessed that the story is tedious. It lacks animation, and the great events are not sufficiently emphasized to make any impression on the mind. At rare intervals the story is enlivened by a sketch like the following :

"Halleck was sedate, deliberate, cautious. He had written a book on strategy and logistics, and his attention appeared sometimes to be distracted from the actual conditions under which the present military operations were to be conducted by his retrospective reference to the rules which he had announced. Grant, under his extremely quiet demeanor, was full of restless activity. His purpose seemed to be to strike and overcome the enemy without waiting ; to use whatever seemed the best means at hand ; ready at all times to change for better means if they could be found, but never to cease striking. Halleck was worried by being jogged to new enterprises, but heartily supported them when once begun."

But there are not half a dozen pages in the whole book of variation from strict narrative.

Nearly half of it is naturally devoted to the battle of Shiloh. Johnston had already abandoned Bowling Green when Donelson fell, and he received news of the surrender while halting at Nashville on his retreat.

"Johnston found the Tennessee, running from Alabama and Mississippi up to the Ohio, in the possession of the National fleets and armies. The force under his immediate command was therefore separated from the force under Beauregard that was guarding the Mississippi. Unless they should join, they would be beaten in detail. To join involved the surrender either of Central Tennessee or of the Mississippi. Johnston resolved to give up Central Tennessee until he could regain it, and hold on to the Mississippi. But to hold the Mississippi required continued possession of the railroads, and such points especially as Corinth and Humboldt. Corinth, both from its essential importance and its exposure to attack by reason of its nearness to the river, was the point for concentration."

On March 24 he reached Corinth with 20,000 men, and was there joined by other troops which swelled his numbers to 40,000. Grant, meanwhile, with 33,000 men, was advancing up the Tennessee, and Buell, with 37,000, was marching across from Nashville. Hearing of Buell's approach, Johnston determined to strike Grant's army a fatal blow before his arrival. The result was the battle of Shiloh or Pittsburgh Landing, fought, on April 6 and 7, 1862, with a fierceness which was never surpassed till the days of the Wilderness. On the first day Grant was driven back to the river. He prepared, however, to make a counter-attack the second day, and, with the aid of a part of Buell's army, did make it, and drove the enemy back beyond their original line. They promptly returned to Corinth.

No battle of the war has given rise to more bitter jealousies or recriminations. But little suspicion of this, however, meets the reader of this book ; the author quotes the well-known despatches of the day before the battle, in which Grant and Sherman reported that they had no expectation of an attack—but he makes no comment on them. In fact, it was a partial surprise, at least. What would have happened but for the arrival of Buell's army, is one of the unsolved questions which can be argued indefinitely, one side maintaining that Grant's army would have been destroyed, and the other that it alone would have driven Johnston back, on the second day. Into this discussion Judge Force does not enter. He shows that on the first day none of Buell's men arrived in time to take any active part ; on the second day both armies were engaged ; and the total losses were about 10,000 in Grant's army and 2,000 in Buell's. But little is said by way of judgment on the battle, except a criticism of Johnston's formation in three long, thin parallel lines, which threw his men into confusion as they all became engaged. In general, "the battle sobered both armies. The force at Pittsburgh Landing saw rudely dashed aside the expectation of speedy entry into Corinth ; the force at Corinth, that marched out to drive Grant into the river, to scatter Buell's force in detail, and return in triumph to Nashville, was back in the old quarters, foiled, disheartened."

With the cautious advance of Halleck on Corinth and the capture of that place the volume ends, and the results of the campaign are thus summed up :

"The objects proposed in the spring were accomplished, though not in the manner designed. The railway connection at Corinth was broken, though not by a mere dash from the river. Fort Pillow was possessed, Memphis was occupied, and the Mississippi open to Vicksburg. The volunteers had been through a hard military school. After their experience in fighting, they had practice in the slow advance to Corinth, in picket duty and field fortification. They had learned something of the business of war, and were now ready for campaign, battle, and siege."

CHILDREN'S BOOKS.

THE readers of *St. Nicholas* will warmly commend to the public 'Phaeton Rogers,' the much-devising boy, whose adventures the Scribners have now published in book form. Dab Kinzer and the three friends who make up 'The Quartet' are also old acquaintances in the *St. Nicholas*. They are all genuine, honest boys, with due capacity for fun, yet all the while steadying into real manliness. There is unexpected merit in the author's development of the character of the black boy, Dick Lee. His tender skill in nursing attracts the attention of the physician, who helps him to fit himself for a surgeon in a Southern hospital, where his career will be adequate for his own ambition, and for the hopes of his early friends of the Grantley Academy. We question if 'Phaeton Rogers,' wherein love enters only through the hearty sympathy of the boys in the happiness of their older friend "Jack-in-the-box," would not be more satisfactory to real boys than 'The Quartet,' which spans all academy and college life, and closes as the hero departs upon his wedding journey. A good story may easily be turned into a poor novel by the addition of just that element. The tone of the book, however, is throughout refined, but the differences between city and country seem rather unduly accented. Little more could be said of a first experience under fire than is said of Dab's first sight of the opera. "Little he knew how tremendous a 'first lesson' he was getting," and so on, and so on, with other episodes of city life. In fact, a boy or girl brought up like Dab, though never so quietly, where his family were considered of the first and best, and his mother was regarded with special respect, would simply accept all the outside accidents and mind them very little. Instead of thinking how different were his really noble and beautiful city friends from "people who had less money, and who knew nothing about dress and style and music," he would simply have recognized that in them akin to what he had always known. It is fair to say that his motives and acts are always manly and high-minded. It is only the author's own reflections that suggest some small beggar suddenly raised to fortune.

Among illustrated juveniles 'The Cat's Arabian Nights,' published by D. Lothrop & Co., can hardly be surpassed for number and variety of pictures. That of a hundred-odd all should be equally good was not likely ; but between the soft grace of Pussy Gray and the comical pertness of Frisky Spekkum with her ear-trumpet, every child will find something after its own heart. The cover is a sumptuous field of white and silver, on which are grouped all the kindred: pussy-clover, pussy-willow, cat-tails, catkins, and kitties. The text, by Mrs. Diaz, is slender. Pussyanita is supposed to tell the stories to the cruel King Tommybus to save the lives of the white and the yellow cats. But the wonder grows where he could have lived not to have heard before such very old stories, and there is no reason to dissent from his judgment, that Pussyanita had told "the silliest story that ever was."

'Mammy Tittleback' (Roberts Bros.) is a refreshing contrast for its very evident reality. "H. H." has put together from the talk of no less than twelve people a droll story of thirteen cats, all one family, in one summer ; and very droll it is, though it is not only with a smile that one reads Rosy's question in her despair over the deserted kittens : "Isn't there some cat that hasn't any kittens that would like some?"

'Dimple Dopp' (J. R. Osgood & Co.) is one of two stories very obviously made up on the 'Alice in Wonderland' pattern. A third, "Cat-Lore," completes the book—evidently a wholesale *mis*-appropriation of "Frau Holle" from Grimm. This would not so much matter, but the children are all of the naughty kind, about whom it is painful to read.

'Cross-Patch' (Roberts Bros.) and 'Mrs. Overtheway's Reminiscences' (Lee & Shepard) introduce us to the same type of unkind, passionate, unhappy children. To name a book 'Cross-Patch' is to perpetuate what had best be forgotten. Of the heroines, Patty beats her little cousin on her neck with the heavy buckle of her belt until the blood comes ; little "Tommy Tucker" is the victim of a termagant stepmother ; a wicked gipsy child repays the faith and sympathy of Persis, who is poor enough, by stealing her only cloak. "Miss Jane" has, of all things in the world for a child, "a favorite cry-place"; while her brother Dick is nearly stung to death by bees, and Matty and Reggy set the house on fire. There are some well drawn side-figures, but but it would be worth something to know where is to be found the maiden lady, austere but sweet, who, true to the loves of her childhood, reads to Patty 'Rosamond and the Purple Jar,' and then follows it with 'The Wide, Wide World' and 'Little Women.' There are impossibilities even in a story-teller's world. Mrs. Overtheway herself is all that is sweet and gentle ; but the author makes her choose, as a fit story to tell a sick and pining orphan girl, how she always hated brown satin because of a disappointment never to be forgotten.

It might be thought that only books for girls were of this sad kind; but Mr. Trowbridge's 'Pocket-Rifle' (Lee & Shepard) has its full share of the same thing. A prize for spelling is offered. It could not have done the school much good, for, after the whole winter's work, on the last day "the word *separate* swept the class." The effect of the offer upon the two head boys is disastrous : Chase suspects Worth of mean treachery ; a bitter feud arises, involving both families, and leading at last to the trial of Worth for stealing the prize—the "pocket-rifle"—which Chase won. Chase is nearly drowned by a spring flood ; Worth saves his life ; and then it appears that Chase was mistaken—Worth did not do that first mean thing. So the whole book seems a very useless heap of misery. Moreover, young boys have not the power, even if they had the wish, to go back over such a story and reconstruct it in the light of the conclusion. They

take it as it comes, and this one certainly gives its approval to devious ways.

It is a rare pleasure to find such a book as 'Hector' (Roberts Bros.), a little tale of French country life. It tells of the love and the sorrow of grown-up people, but from the child's point of view, and with such exquisite skill as to make it one of the most beautiful of children's books. It is a pure idyl, sweet and fresh as the songs of the birds that carol through its pages. Zélie, a young girl, records her memories of a summer which her English cousin Hector, a lad of twelve, spent with Gran'mère and herself at the old grange of Salaret. For his arrival the drawing-room floor "was fresh waxed and polished; a faint scent of honey rose from the shining boards. . . . The peach-trees outside were in full blossom, and their pink boughs crossed each other before the open windows, throwing rosy reflections on the floor." They walk in the woods.

"The sun was so low that the shadows of the trees crossed each other, in long drawn-out perspective, over the patches of shining white and mauve anemones and green tufts of daffodil spikes which broke the russet of last year's fallen leaves, and the wood was alive with the cries of little birds going to roost. Sweet and harsh, low and shrill, they answered each other across the hollow, till we could have believed that every bud and branch had its voice, and that the trees were singing in chorus."

There they meet the lovers, Georges, the farmer-soldier of Saint Loubouët, and Irma, the peasant-girl. Zélie remembers them long after. Hector describes Irma's beauty to her possible rival:

"Then her lips—she really has lips, as they say in story-books, the color of cherries; and nice little feet, with good sensible shoes that she can walk in; and hands burnt a pretty brown color in the sun. And sometimes, when she laughs, she puts her head on one side just like a blackbird. Doesn't she, Zélie?"

Irma's father is poor; the loss of his ox threatens the family with ruin. It is now the rich miller's time to press his suit. Georges is far away with his colonel at Montfort, and who shall bring him to save Irma? Hector and Zélie secretly set forth on this errand. The oft-told tale of runaway children is related with such pure simplicity as makes it inexpressibly charming. At the fourth nightfall, in the rain, they reach Montfort, footsore, fainting, almost starving; but Hector is still brave for loyal little Zélie's sake. "A gentleman must not fail the people who trust in him," he says. He will sing in the street to win a few sous. The first verse of the English "Home, Sweet Home" is scarcely finished when the astonished voice of Georges greets their ears. They are safe, though Zélie falls unconscious in his arms. Their affectionate, impossible errand has succeeded. Irma and Georges are happy, and Gran'mère forgives the anxiety of those four days of searching and waiting, for the sake of the generous daring of her children. The author, Miss Flora L. Shaw, had already achieved an enviable success in her 'Castle Blair,' to which this book must greatly add.

Of at least one element in a book boys may be conceded to be competent judges. Improprieties of course excepted, if it be "interesting," that alone will make up for almost any deficiencies of style, subject, or execution. Mr. Ballantyne's 'Giant of the North'; or, Pokings Round the Pole' (T. Nelson & Sons), neatly printed and bound, is well calculated to impart to the audience for which it was written all the old misconceptions in regard to the Polar regions, and many new ones, some of which would be startling were they not presented in a manner so particularly tedious. Impossible physical conditions, impracticable pseudo-scientific masquerading by an ungrammatical father, an ill-bred son, a preposterous negro, and an Esquimaux who talks like Joseph Cook—these are the materials by the aid of which the author would rivet the attention of the boy of the period. We venture to predict that he will not succeed, and that it will be an unusual boy who will not find him out at once. Were it not so tiresome, the book would be objectionable on account of the bad breeding exhibited by one of the family described in it, and which the author appears to have mistaken for wit. As it is, however, the work is its own most efficient antidote.

Of the three boys' books on Boston which, by a singular coincidence, one and the same season has brought forth, Mr. Butterworth's is easily the poorest, though quantitatively it may offer most for the money, and it brings the story down to date. But its literary defects are great and its accuracy is not to be relied on. Mr. Samuel Adams Drake's 'Around the Hub' (Roberts Bros.) is, on the other hand, much the best; for though the author is not as skilful with his pen as Mr. Scudder, he is not a slovenly writer, and we think he has done well to drop the burdensome fiction of *dramatis personæ*. His book ends with the Revolution, as does Mr. Scudder's, but its scheme is quite different, dealing rather with epochs than with men, and this in a way which betokens first-hand knowledge such as neither of the other books we have mentioned implies. This is especially felt in the descriptions of primitive manners and customs in Boston, as well as in the laudable reference to authorities with a "look it up." Mr. Drake sedulously avoids painting the Puritan forefathers in rose-color, though perhaps the indirect reproach that the better geographical knowledge of the Dutch secured the latter the glory of founding the greatest city on this continent, may be thought whimsical. Another good feature is justice to the character of the British soldiery, a point worthy of a little more expansion by reference to the nature of standing and mercenary as compared with patriot armies. In the last chapters, on the siege of Boston, Mr. Drake's archæology gets the better occasionally of his dramatic purpose. The illustrations of this book are generally good and useful, yet might easily be improved upon; and we cannot account for the total lack of portraits and maps.

Nineteen Christian Centuries in Outline. A Guide to Historical Study, for Home Reading and Literary Clubs. By Lewis O. Thompson, formerly President Northwestern University, Watertown, Wis. With an Introduction by Rev. J. R. Miller, author of 'Week-day Religion.' Chicago: A. Craig & Co. 1881. 12mo, pp. 379.

THIS book, published as a guide to historical study, appears from the preface to have been itself the outcome of the practical work of a literary club. Except for the assurance given, however, we could hardly believe that the programmes here presented "were substantially followed" in the course of study pursued by such a club. Imagine a single evening spent upon the following topics for the fifth century (p. 169): Characteristics of this age; Hypatia; the Council of Ephesus; St. Patrick; the idea of ancient liberty; the battle of Châlons; the Seven Sleepers; St. Augustine; the Council of Chalcedon; the fall of the Roman Empire; St. Jerome; monastic life; St. Simeon Stylites! What can result from so crowded a course but scrappy superficiality? Nothing could save it but great skill and strong personal power in the conductor of the club, and these we may fairly assume to have been present. As to the book, it is in its later chapters hardly more than a catalogue of names and events. The earlier centuries are much fuller—in fact, very discursive in some parts, especially in the history of Christianity; the first six centuries make up just half of the volume. A good deal of useful, but not very well digested nor always accurate, information is given, and for each century there is a pretty full chronological table, in which we find such remarkable statements as: "56. Rotterdam is built; 486. Rise of the Feudal System in France under King Clovis; 580. Latin ceases to be spoken in Italy; 996. The German Empire is made elective by Otho III."

My First Holiday. By Caroline H. Dall. Boston: Roberts Bros. 1881.

UNDER the title of 'My First Holiday,' and in the form of letters to friends at home, Mrs. Dall has given to the public an account of a few months' travel, during the summer and autumn of 1880, in Colorado, Utah, and California. The last-named State receives the largest share of attention; and whatever other errors the writer may have fallen into, she has at least escaped the hitherto somewhat common one of bestowing unlimited admiration upon almost everything connected with that country and its people. Those of Mrs. Dall's readers whose ideas concerning California have been drawn from some of the popular books on the subject that have appeared within the last ten years, should be prepared to have some pleasant illusions destroyed. The first page sounds the warning note of disenchantment in a dedication of the book "to the dear cousins who turned desolation and dreariness into delight"; which, however complimentary to the cousins, is such very plain language about the place they live in that one searches the pages impatiently, in advance, to see whether their lot was cast in the arid waste of Death Valley or on some glaring alkali flat of the Ninety-Mile Desert, or, possibly, the disfigured hillside of some abandoned mining gulch. It will probably surprise some readers to discover that Stockton, one of the principal cities of California, could be thought capable of furnishing (outside of its lunatic asylum) a background of "desolation and dreariness" dark enough to set forth anybody's virtues so conspicuously as the dedication of Mrs. Dall's book implies.

Mrs. Dall has not suffered herself to be imposed upon with any extravagant notions about "the finest climate in the world," or the boasted excellence of the fruit, or anything else, in fact, for which the Californian claims superiority over the rest of the universe. The so-called uniform climate of California she finds only a uniformity of change, each day giving greater variations of temperature than any Atlantic town can show. She spent weeks in San Francisco during which neither the rising nor the setting of the sun could be seen, so heavy were the fogs. As for fruits, the market was full of peaches, pears, plums, grapes, nectarines, apricots, and figs, all lovely in color, but without any pleasant taste, and compared with them Mrs. Dall declares one Northern peach to be worth the whole lot. She went to California especially to eat grapes in their season, but they were all sour and watery and unfit to eat. The strawberries were beautiful to look at, but so disagreeable and bitter in flavor as to be past recognition if taken into the mouth with the eyes shut. The melons were not so sweet as those from Boston fruit-stands; and a month's search in the markets failed to produce a single ripe tomato. Moreover, the fish markets are poor and not nicely kept, and the meats are

very inferior to those in the Eastern stalls. These things, the reader is assured, are not said captiously, "but to comfort those who fancy everything good can be found in California." The book is rich in this kind of comfort. Its author saw little or nothing in California which was thoroughly good; but then she did not see the Yosemite Valley, which Mr. R. W. Emerson, another ill-satisfied critic, is said to have pronounced "the only thing in California quite up to the brag."

This tone of the book, however, will not diminish its interest for a multitude of readers, especially in the West; and much that it contains will meet with a hearty response of approval from many who have gone over the same ground. Not the least interesting portion of Mrs. Dall's narrative is the description of her visits to Leadville and to Salt Lake City, and her comments on the state of education and morals in those communities. Her observations on Pullman-car conductors and porters will doubtless arouse some sympathetic recollections on the part of almost every one who has made the overland journey. Throughout her book, Mrs. Dall offers frequent observations on the geology and botany of the country passed through; but the use of terms like "volcanic limestone" implies little knowledge of rocks and their classification; and "escholtzia" is not the proper spelling of the name given to the California poppy in honor of the botanist, Dr. Eschscholtz.

35 cents; $4 a year.

NEW BOOKS.

JAMES T. FIELDS. Biographical Notes and Personal Sketches, with Unpublished Fragments and Tributes from Men and Women of Letters. 1 vol. 8vo, $2.

A book of unusual interest, written by the one who knew Mr. Fields most intimately. It tells the story of his life, describes his social, business, and literary activity, his visits to England and the Continent, and weaves into the narrative a most engaging selection of letters, including some written by Mr. Fields, and more from his illustrious friends, of whom he had so many.

YESTERDAYS with AUTHORS. By James T. Fields. Essays on Pope, Thackeray, Hawthorne, Dickens, Wordsworth, Miss Mitford, Barry Cornwall, and others. *Holiday Edition.* Handsomely printed, and embellished with ten fine steel portraits of the authors named; forming a very desirable gift-book. 8vo, full gilt, $3.

AMERICAN MEN of LETTERS. Vol. I. WASHINGTON IRVING. By Charles Dudley Warner, author of 'My Summer in a Garden,' 'In the Levant,' etc. With a fine steel portrait. 16mo, $1 25.

This book is not only a most auspicious beginning of the series of "American Men of Letters," but a noble and most delightful work, complete in itself. As biography, it relates the story of Irving's successful and beautiful life with admirable fitness; as literary history, it indicates with rare discrimination the real value and charm of Irving's works, and their honorable place in American literature. Of the manner in which the book is written, it is sufficient to say that Mr. Warner wrote it.

N. B.—*Mr. Warner is Editor of the series.*

THE PORTRAIT OF A LADY. By Henry James, Jr., author of 'The Europeans,' 'The American,' etc. Beautifully bound. 12mo, 528 pages, $2.

This is the most important and the most engaging novel Mr. James has yet written. It has in a high degree the rare excellences of Mr. James's writings—acute observation, close study of character, subtle reflection, and a charming style; and it is quite certain to be read with admiration and delight, not only to-day, but by coming generations of readers.

WILLIAM LLOYD GARRISON and his Times; or, Sketches of the Anti-Slavery Movement in America, and of the Man who was its Founder and Moral Leader. By Oliver Johnson. With a portrait, and an Introduction by John G. Whittier. New, revised, and enlarged edition. 12mo, $2.

This is the best account yet written of Mr. Garrison's life, of his heroic and persistent fight against slavery, of his allies and his opponents, and of the influences that aided and those which impeded the great struggle for freedom.

LITERATURE OF THE DAY.

PROSPECTUS FOR 1882.

At the beginning of the present year *Lippincott's Magazine* entered on a new series, at a reduced price, with the distinctive purpose of presenting such a variety of reading matter—for the most part light and entertaining, yet of real literary merit—as should commend it to the general mass of cultivated persons and ensure it a welcome in many American homes. Devoting a large proportion of its space to fiction, in which short serials are made a noticeable feature, and to sketches illustrative of social life and manners, it has included in its list of subjects curiosities of science, especially natural history, popularly treated, travel and adventure at home and abroad, field sports and angling, and, occasionally, political, historical, and educational topics susceptible of fresh and lively discussion. The serial stories published during the year have been marked by a piquant originality, and have met with a warm reception; while the general attractiveness of the Magazine has gained for it cordial approval and an increased circulation.

The conductors of the Magazine hope not only to maintain its reputation, but to enhance and extend it by constant improvement in the same direction. Their arrangements for the coming year embrace a larger number than ever before of CONTRIBUTIONS OF A POPULAR CHARACTER.

A SERIAL STORY ENTITLED "STEPHEN GUTHRIE," in which some peculiar and striking phases of American life are vividly and dramatically treated, will begin in the January number, and run through six months.

THE EDITORIAL DEPARTMENTS will maintain their present standard of acknowledged excellence, and THE ILLUSTRATIONS will be of a higher character than any that have hitherto appeared in the Magazine.

FOR SALE BY ALL BOOK AND NEWS DEALERS.

TERMS: Yearly Subscription, $3; Single Number, 25 cents. LIBERAL CLUB RATES.

NEW YORK, THURSDAY, NOVEMBER 24, 1881.

The Week.

THE Wall Street markets were disturbed during the week, first by a report that the Tradesmen's National Bank of this city was in trouble, which report proved to be an invention, and then by rumors that two Boston banks were in trouble; these latter proved to be correct. The Pacific National Bank of that city was obliged to close its doors after a most disgraceful exhibit of mismanagement. The other embarrassed bank was the Central National, which was compelled to stop payment, but only for about two hours, thanks to the assistance of the banks of the Boston Clearing-House Association, of which it is a member; so that at the close of the week it was apparently in a strong position. The Pacific National was put in the charge of the Bank Examiner, who reported that its entire capital of $1,000,000, and a good part if not all of the additional liability of the stockholders, would be needed to meet its obligations. The trouble with the bank was that, without the knowledge of its ornamental Board of Directors, it had undertaken to "carry" a speculator in mining and low-priced railroad stocks; for some of its loans to him it had received collateral security, and for others nothing except his personal obligations. The cashier of the Central had lent money of that bank to the Pacific, but received security for the larger part of the loans; and it appears that he had done this without the knowledge of the directors.

Altogether, the disclosures had the effect of creating widespread distrust respecting bank management generally, and of temporarily disturbing the Boston and New York money markets. At the New York Stock Exchange the most was made of the matter; and after the crisis in Boston had passed, rumors of other troubles in banks were kept afloat in Wall Street; so that one of the favorable conditions for a "bear speculation" in stocks may be said to have existed through the latter part of the week. Prices of speculative stocks fell during the week from ¼@4½ per cent. for stocks actively dealt in, and 2 to 13½ per cent. for "specialties," in which transactions are more limited. United States bonds fell ⅛@⅝, except for the extended 6's, which advanced ⅝, and railroad bonds declined ¼@2¾ per cent. The money market became active, and needy borrowers paid daily commissions in addition to 6 per cent. per annum. The high rates for money lowered the rates for foreign exchange, but not to the point at which gold could be imported. The new Secretary of the Treasury has not yet called in a large amount of extended 6 per cent. bonds, as it was reported he would do, but offered to take $4,000,000 of these bonds at par and accrued interest; he failed, however, to get any part of these, and the money market, therefore, received from the Treasury no extraordinary help to offset the shipments of currency to Boston, and the ordinary drain at this season of the year to the South for the movement of the cotton crop.

There is good ground for believing that banking mismanagement, of which several startling illustrations have lately come to light, may work its own cure by the magnitude of the losses in which it has involved stockholders. Of course every improvement which experience suggests should be introduced in the system of examinations and reports; but if a theoretically perfect law should be passed it would still be ineffectual without a faithful and thorough administration; and even with it a shrewd rascal by new tricks may elude the closest vigilance. Not only expert and industrious examiners are wanted, but honest tellers and cashiers, presidents with their eyes wide open, and directors who do something more than nod over official reports at regular meetings. No statute can take the place of good business management. Such management can be secured in the end only by the efforts of those to whom the business belongs, who divide its profits and bear its losses—the owners of the bank's shares. If they do not take pains to appoint competent and trustworthy agents, their interests will suffer as surely as will those of other neglected business. The money stolen from the Mechanics' Bank of Newark, and the money loosely lent without sufficient security by the Pacific Bank of Boston, comes out of the pockets of the stockholders. Not only do they lose their capital, but they are responsible for an equal amount to make good the losses of the depositors. The stockholders, therefore, have the first and largest interest in good management.

The Republican Central Committee of this State has appointed a committee to report what amendments to the constitutions of the district associations are necessary to change them into real Republican primaries. The chairman of the committee is Mr. George Bliss, who only a few weeks ago, in the Convention held in this city, opposed and succeeded in defeating a resolution providing for just such a reorganization. The appointment of the committee is a matter of no ordinary importance, because it shows that the managers of the Machine in the city have been startled by some of the results of the late election, and see that they cannot any longer ride roughshod over public opinion in their party through a system of nomination by oath-bound clubs from which the majority of Republicans are excluded. Mr. Elihu Root, one of the committee, stated in an interview on Saturday, that the requirement of the district organizations of a pledge in advance to support the candidate, bad or good, would probably be amended in some way. He thinks that the great mass of voters are too indolent or too much engaged in business to trouble themselves about primaries—which is undoubtedly true—but believes that by repealing the pledge clause "we shall deprive this class of voters of all grounds of complaint that they cannot enter our ranks." This shows that the Machine leaders have begun to reflect, and when a Machine leader begins reflecting there is always hope for the honest voter who is ready to exert himself.

The large independent vote polled by Mr. Wolfe in Pennsylvania has not unnaturally convinced him that he was right in believing that he could do more for reform outside the party lines than within them. He therefore would have nothing to do with a Republican conference held in Philadelphia on Wednesday week, designed to take measures for restoring party harmony and at the same time overthrowing "bossism." He said that while he regarded the purposes of the conference as excellent, he did not think that it would result in the control of the next State Convention; but his principal objection was, that "if those who met together in conference in the Continental Hotel should fail to control the next Convention, they would abide by and sustain its action just as they did in the case of Mr. Baily, though it means in its results the perpetuating and strengthening of the power of the bosses for another four years, thereby enabling them largely to control the name of the next Republican candidate for President and the election of the next Republican United States Senator to succeed Senator J. Donald Cameron." This would be a mere prolongation of Machine rule. For these reasons Mr. Wolfe and his supporters (who are much bolder now that their leader has shown that he can bring out an independent vote of fifty thousand against the Machine) decided not to go into the Convention, and not to be bound by its decision, but to go on and strengthen their own organization throughout the State, and keep it as a permanent and serious threat hanging over the bosses' heads. The latter have evidently not heard the last of the Wolfe movement, nor of that sickening idea, reform.

The recent Tariff Convention at Chicago, according to the *Tribune* of that city, was a melancholy affair. The large Music Hall had been hired for the occasion, but the number of delegates and spectators was so small that the Convention adjourned to the room of a singing society in the same building having a seating capacity of 250 persons, but even this was too large for the purpose, the room being at no time more than half full. One-quarter of the delegates were residents of Chicago, and they included a number of distillers who were interested in the whiskey tax. There was also the usual number of parasites—editors of weekly newspapers, lecturers, and colporteurs—who make a living by preying upon the protected classes. The proceedings were tame and altogether perfunctory, and the demonstration was far from being an impressive one.

The resolutions of the Tariff Convention are very strange reading. The first ascribes to the "protective system" the supply of the money which crushed the Rebellion, which revived the national credit, and discharged in large part the national debt. This totally ignores the services of the internal revenue, which every year since 1861 has brought in almost half the national income. The statement of the Convention, therefore, admitting everything it would claim as to the wisdom of "the protective system," is not simply wildly inaccurate, but a gross slander on direct taxation. The resolutions further thank the protective system for "turning the balance of trade steadily in our favor," but, as Mr. Chamberlain pointed out in his speech in England the other day, this same thing has been done for France by going to war, getting well thrashed, and having to pay the expenses. Nothing so effectually "turns the balance of trade in your favor" as contracting a big foreign debt, which compels you to export a great deal of your products without getting anything back in return. One of the most curious crazes of the nineteenth century is the satisfaction some men take in contemplating this state of things. "Ha, ha!" they say, "look how much we sent abroad last year, and how little we received in return! God bless debt; it has been the making of us!"

The recommendation of the Convention that the Government should "so discriminate in favor of American vessels" engaged in foreign trade as "to secure to them a fair and lucrative share of the world's carrying trade, proportionate to the dignity and power of the country in other respects," has all the vagueness of the resolution of a Socialist meeting. We cannot discriminate in favor of American ships trading to foreign ports by a tax on foreign shipping, because the foreigners would retaliate. We can only discriminate by a bounty—that is, by hiring American shipowners to to carry on a losing business. If the bounty were needed, the business could not, from a national point of view, be considered "lucrative." No business is lucrative which has no profits, and in which those who carry it on are saved from bankruptcy by gifts. Whether the gifts come from the public or from family friends makes little difference. Nor can such a business be proportionate to "the dignity and power of the country." There can be no relation between "the dignity and power of the country" and a business which does not pay. We might as well say that every rich man's dignity required him to have a lot of poor relations and lame horses.

The *Sun* published on Tuesday a sworn statement by Mr. M. C. Redell with regard to the alleged attempt made by Attorney-General MacVeagh to induce him to steal Dorsey's books for the benefit of the Government in the Star-route cases. The correspondent who furnishes the statement, says that Mr. Redell is a man of "good standing." He will not remain a man of good standing hereafter, however, for he appears, according to his own account, to be a brazen liar and accomplished spy. His story is that he is Dorsey's "stenographer and business agent," and in this capacity has acquired great skill in imitating his employer's handwriting. In fact Redell can sign Dorsey's name "so near like he does" that he has succeeded in signing checks that "passed the bank." What was done with the proceeds of such checks he does not say, but as it is improbable that he would accuse himself under oath of forgery, it may be assumed that this practice in imitation of handwriting was merely a pleasant "little game" between the two, pursued out of business hours, in order that the stenographer might increase his sphere of general usefulness. The substance of Redell's story is that he, knowing Dorsey to be a perfectly innocent man, thought it advisable to worm himself into the confidence of the Attorney-General so as to find out all he could about the case against him. For this purpose he hinted to Senator Clayton, who was taking an active part against Dorsey, that he would be a valuable witness for the Government. Clayton then brought about a meeting between him and Mr. James. Redell frankly told Clayton that he wanted in return for his testimony, first, the reëstablishment of a steamboat route on the Savannah River; second, the payment of the claim of one Isaac Jennings against the Post-Office Department; and third, a position for his father-in-law, whom he was then supporting, in one of the departments. Clayton said that he would do what he could with Mr. James.

It was then arranged that he should see the Attorney-General, whom he met the next day. At this interview he told Mr. MacVeagh a long story about certain "books" of Dorsey's, containing valuable evidence, which he said were in New York, but which in reality had no existence. The Attorney-General, he says, urged him to steal the books, and told him in a pleasant but general way that he should not suffer by the loss of Dorsey's employment. Redell never mentioned anything of all this to the innocent Dorsey, because he knew it would receive that moralist's condemnation. At one time he not unnaturally thought of leaving the country, but Mr. MacVeagh, in order to impress upon him "the fearful consequences of such a step," gave him "a history of the Udderzook trial," which was, if we remember right, a murder case. He also mentioned incidentally that "he held Cook in his grip, and could make him an outcast on the face of the earth." In what precise words the Attorney-General urged Redell to steal the books he does not say, but probably he whispered hoarsely in his ear (as villains usually do under such circumstances): "I must have the books. Steal them, and you shall have that you demand. Steamboat route No. 15,099 shall be reëstablished, the Jennings claim shall be paid, and your venerable father-in-law shall no longer be a burden to you. All this shall be yours if you will but steal the books"—which, by the way, Mr. MacVeagh somewhat inconsistently stated he did not need, as he could convict Dorsey "forty times over" without them. Redell was greatly shocked by this behavior of the Attorney-General, and sent this full account of his nefarious proposition to the President last June. He and the Cabinet must have had a good laugh over it.

About the wisdom of Mr. MacVeagh's resignation there are two opinions. We incline ourselves to the belief that it would have been better for the country and better for his own fame had he made up his mind to remain in office, as President Arthur wished him to do, until the Star-route cases were disposed of. But we recognize the fact that he himself, who holds the opposite opinion, knows more of the facts than we do, and that the very reasons which make it seem desirable that he should continue in office, also make his view *prima facie* respectable. In other words, no final judgment can be passed on the matter until his side of the case is heard, and it seems to us he would do well to let it be heard. In the meantime the attempt to "break him down," and by breaking him down to discredit the cause which he represents and has served, will probably fail through excessive lying. Moderate and careful lying might have damaged him, for, as we have said, many good people doubt his judgment as shown in his present course; but the gross self-indulgence of his detractors has been carried almost far enough to save him the necessity of explanation.

Mr. Thurlow Weed says he has often thought that if three of the most successful business men the country has produced—Commodore Vanderbilt, George Law, and Dean Richmond—"had to undergo a competitive examination in these days of civil-service reform as candidates for positions in the custom-house or post-office, they could not get places as night watchmen in the Collector's office, or letter-carriers in the postal service." It may do for a gentleman in the enjoyment of well-won leisure like Mr. Weed to think such things as an amusement, but they are hardly worth thinking as contributions to the world's stock of wisdom. The competitive examinations in the custom-house or post-office are intended to test the capacity for the discharge of routine duties of persons of moderate ambition who are satisfied with a small salary paid monthly. They are not intended for persons who expect to be millionnaires. Men like young Law, young Vanderbilt, and young Richmond do not seek places in the custom-house and post-office; they prefer other lines of life. They are, therefore, not shut out by the examinations, and it is no more an argument against the examinations that these men could not pass them than it is an argument against the exaction of writing and spelling at West Point that Napoleon wrote illegibly and never could spell, or that some generals have risen from the ranks. The custom-house and post-office tests are, in short, applied to ordinary men who are to keep accounts or deliver letters, and not to men who mean to run railroads and lines of steamboats. The Government has no occasion for the services of great speculators. If it had, however, it would be far better to subject them to examinations such as naval officers undergo, or as to the course they would pursue in stock operations under given circumstances, than to let the Senators and Representatives pick them out, because in the latter case they would get their places by secretly

giving "points" to their "influence," and not through their superior merits.

The contest over the representation of Utah in Congress which is going to come up this winter will probably lead to the publication of a good deal of "news" with regard to Mormonism and its spread in the West, in the course of the next month or two. A Washington correspondent of the *Tribune*, for instance, sends word that the Mormons have been for years "quietly but industriously laying their plans to control in a measure the local governments of the Territories in the neighborhood of Utah, and have in a great measure succeeded in their preliminary efforts." It is also stated that the Mormon priests are civil judges as well, and try temporal cases, which the correspondent says is "a pretty plain admission of the charge of connection between the Mormon church and state." This connection has notoriously existed ever since the Mormon Church was founded, and the exercise of temporal functions by the Mormon priests was one of the reasons which led years ago to the passage of the so-called "Poland" Bill by Congress, which took away their general civil jurisdiction from the "Probate" or Common Judges and transferred it to the District Courts. This legislation has probably, however, not broken up the Mormons' habit of resorting voluntarily to their own tribunals, and no mere legislation will ever make them do it.

In Ireland the Land Act seems to be working as well as the enormous number of applications for the benefits of it will allow. Of course these applications are so many declarations of willingness to pay rent, and therefore so many proofs of the failure of the no-rent manifesto of the League. In fact, there are numerous indications of a desire on the part of the leaders to drop the land question altogether now and go back to Home Rule, and this is probably the turn things will take during the coming winter. When Parnell comes out of jail he will find a very large proportion of the tenantry settled for fifteen years certain on farms the rent of which has been reduced from one-quarter to one half, and the remainder looking forward to the same thing. Under such circumstances a revival of the League, in anything like its former strength, will be impossible, and he will have to raise the old banner of Home Rule. There is little question that this will furnish materials for a very respectable agitation, but the Leaguers will, after their late failure, never again be able to speak with the same authority. They will, however, be able to say, and with a great deal of force and effect, that as tumult and disorder produced the Land Act, they may be relied on to produce Home Rule also.

It seems as if Gambetta's appointment of Paul Bert as Minister of Public Instruction really was a mistake. It has produced, at least in the official class, numerous signs of disgust, which will undoubtedly be greatly increased if the story be true that Gambetta proposes to detach Worship from the Ministry of the Interior, and attach it to Public Instruction instead of Fine Arts. Paul Bert as Minister of Public Worship would be so grotesque a spectacle that one would naturally expect that his self-respect would not permit him to hold the place. In fact it is difficult to see how any Positivist can hold any position giving him the direction or superintendence of religious organizations. A public officer ought to respect his work in order to remain an honest man.

The latest diplomatic news from South America is not of a reassuring character. Great excitement, as was only natural, was produced in Chili by the publication of General Hurlbut's letter to Admiral Lynch informing him that he could not annex any Chilian territory without violating international law, and M. Balmaceda, the Minister of Foreign Affairs at Santiago, at once addressed a note to General Kilpatrick, our Minister to Chili, asking for an explanation. In the ordinary course of diplomacy this would have been a rather singular step. If the Chilian Government felt aggrieved by Mr. Hurlbut's behavior, the natural thing to do would be to instruct the Chilian Minister at Washington to make representations and ask for explanations from the State Department. General Kilpatrick knows nothing about Mr. Hurlbut's instructions, and Mr. Hurlbut knows nothing about General Kilpatrick's. But the reason why the Chilians at once called upon General Kilpatrick to find out whether Mr. Hurlbut was acting within his powers was, that they knew in advance what the answer would be—that General Kilpatrick was no "red-tape" diplomatist, and that he would have no hesitation in hauling Hurlbut over the coals in a thoroughgoing way. This he promised at once to do. He declares that he has read Mr. Hurlbut's "memorandum" and his speech at his reception by Calderon, and that the first "cannot be considered of official or diplomatic character"; he then quotes his own instructions, which were to the effect that the United States regarded the war between Chili and Peru as ended, and the opportunity for friendly intervention on our part as probably gone by. He was also emphatically told "under no circumstances" to offer any advice to the Chilian Government unless it should be asked for.

If this were all, there would be nothing to say about the instructions, except that they made it very improbable that General Hurlbut could have any authority for what he has been doing. But the reply concludes with the following statement:

> "Another clause refers to the Provisional Government of Señor Garcia Calderon, which the Washington Cabinet hoped to see established, and instructs me to encourage it only in a manner becoming the dignity and neutrality of a plenipotentiary without interfering in any manner which might appear officious."

Hurlbut is said to be preparing a reply to General Kilpatrick which will show that he has not exceeded the limits of his authority at all. Kilpatrick is understood to be just as zealous a friend of Chili as Hurlbut is of Peru, and it is said he offered his services to the Chilians at the outbreak of the war. Both of them were given their places as a reward for campaign speeches. Hurlbut, as appears from his proclamations, is grossly ignorant of the elementary principles of international law, and completely indifferent to the decorum of diplomatic intercourse. But it is entirely impossible for the Administration any longer to escape from the responsibility for such disputes as these. The affair is gradually assuming the proportions of a diplomatic scandal, gravely involving the credit and reputation of the country abroad.

The Emperor's speech at the opening of the German Reichstag, delivered this time, on account of his indisposition, not by the Emperor in person, but by the Imperial Chancellor, is a curious document. With regard to the foreign relations of the empire its tone could not be more pacific. It expresses the most absolute confidence in the maintenance of peace, and refers particularly to the meetings of the Emperors of Germany, Austria, and Russia as "expressions of close personal and political relations between the sovereigns and their empires," all of which is reported to have been received in the capitals of Europe with great satisfaction But the passages of the Emperor's speech concerning home affairs produced a very different effect upon the members of the Reichstag who listened to their delivery. The Emperor speaks as if the recent elections, and the popular sentiment which through them found expression, were things of no consequence whatever. In the campaign preceding those elections certain measures urged by Prince Bismarck upon the Reichstag at former sessions were distinctly and avowedly in issue before the voters, and a formidable majority of the latter pronounced themselves against those measures. Although the newly elected Reichstag is divided into a considerable number of parties and "fractions," a strong majority of its members is known to be opposed to the Chancellor's present programme, the principal features of which are the tobacco monopoly, appropriations for two years, legislative periods of four years, the invalid workingmen's insurance by the state, etc. All these propositions are, in the Emperor's speech, urged again upon the attention of the Reichstag as if the people had never expressed any opinion about themnd and they are pressed with that characteristic paternal unction which Bismarck knows how to infuse into the Emperor's official utterances. It is no wonder that the members listened to these things "with icy coldness, and that not one sentence was applauded." The speech shows that the Emperor and the Chancellor are in perfect accord. The latter will, of course, remain in office, but he will probably find it more difficult than ever to form out of the obstreperous elements in the Reichstag combinations and occasional majorities by which to carry his measures. The Opposition has not only made respectable gains in point of numbers, but it has also gained in spirit. It feels the people at its back, and will not be so easily overawed by Bismarck's towering will and renown as on former occasions. An early dissolution of the Reichstag, when the Chancellor finds the majority intractable, may therefore be looked for.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THE selection of jurors for Guiteau's trial was completed on Wednesday, and on Thursday the case was opened for the prosecution by District Attorney Corkhill, who delivered a very effective address showing that over a year ago Guiteau had conceived the idea of getting a foreign office under the Garfield Administration. He first applied to General Garfield for the Austrian Mission, but afterward wrote to Mr. Blaine that he had changed his mind and concluded to apply for the Consul-Generalship at Paris, as he "preferred Paris to Vienna." He followed up this last communication by "persistent personal appeals, and by writing notes and letters urging in various ways his claims for this position." On the 8th of June, finding that his efforts to secure the Consul-Generalship had proved unsuccessful, he borrowed fifteen dollars from a friend, with which he purchased a pistol "of the largest calibre." On the 18th of the same month he went to the depot intending to kill the President as he started for Long Branch with Mrs. Garfield. He concluded, however, to forego the accomplishment of his purpose on this occasion, and on returning to his room he sat down and wrote that he had been deterred from committing the act by the appearance of Mrs. Garfield, who, to use his own words, "looked so thin, and clung so tenderly to the President's arm, that my heart failed me to part them." After the close of Mr. Corkhill's address the examination of witnesses began. The object of the opening address for the prosecution was to show that Guiteau's act had long been premeditated and was the outgrowth of his failure to obtain office under the Garfield Administration. Mr. Blaine and Señor Comacho, the Venezuelan Minister, and other witnesses of the shooting, were examined on Thursday and Friday. No testimony of any importance, with which the public was not already acquainted, was elicited from them. Mr. Brown, President Garfield's private secretary, was also examined on Friday. He produced eight letters from Guiteau to the President. The first three were on the subject of the Consul-Generalship, and the last five referred in addition to the contest which was then going on between the Administration and the Senators from New York. In these letters Guiteau says that he "stands by" President Garfield. On Saturday Mr. George C. Maynard, who lent Guiteau the money with which he bought the pistol, was examined and the pistol identified. Dr. Bliss was also examined and a part of President Garfield's vertebræ was exhibited in court. A great sensation was created on this day by an attempt which was made to shoot Guiteau in the van in which he was being conveyed back from the court to the jail. The man who made the attempt, and who was mounted at the time, is said to be William Jones, a farmer residing in the neighborhood of Washington, and notoriously eccentric and a hard drinker. He was arrested, but he denies that he was the man who did the shooting, and his identity is a matter of doubt. On Monday Mr. Robinson, who has been the associate counsel for the defence, requested Judge Cox to relieve him, owing to the impossibility of his agreeing with Mr. Scoville as to the manner in which the case should be conducted. Judge Cox granted his request. Two or three more witnesses were examined, and the prosecution then closed its case. Mr. Scoville then began his opening address.

The treasurer of the Garfield Memorial Hospital Fund announces that the contributions now amount to $80,000, and that assurances have been received from all parts of the country that this sum will soon be increased by large additional subscriptions.

The committee appointed by the Medical Society of Washington to investigate the reports of the prevalence of malarial diseases in Washington report that the statements which have been published during the last year or two, that an unusual amount of sickness has prevailed in the city, are entirely unfounded, and that Washington is "unquestionably as healthy as the most favored cities of this country or Europe."

Proceedings in the second of the Star-route cases were begun in a very unsatisfactory manner on Monday. The suit was brought against F. B. Lilley, ex-Deputy Auditor for the Post-office, who was charged with having taken a bribe from a mail contractor, Brott by name. Brott, who was the Government's only valuable witness, did not appear in court, and Colonel Cook, the counsel for the Government, failed to make much of a case. It is stated that had Brott been present the Government might easily have made a *prima-facie* case. The story is that "interested persons" persuaded Brott to leave Washington so that he might not appear in court.

The Pacific National Bank of Boston suspended payment on Friday. The immediate cause of the suspension was the failure of a stock broker named Theodore C. Weeks, who had been allowed to overdraw his account by a large amount. The Central Bank of Boston also suspended payment for two hours on Saturday. The bank examiner said that it was impossible for any director or official of the Pacific to have learned by examination of the books that the bank had been placed in a perilous condition, as the President of the bank had made no record or entry of the transactions with Weeks, but had "carried it all in his head."

Postmaster-General James has published his report for the fiscal year ending June 30. The report estimates the deficiency for the next fiscal year at less than a million dollars; urges the establishment of postal-savings depositories after the pattern of those in operation in Great Britain; denounces the extravagance in the service, and particularly in the Star service, and states that the legislative branch of the Government is largely responsible for the "scandals attending the administration of the Post-office for the past quarter of a century, because the power to remedy the evil could have been exerted at any time." The report concludes with an appeal for a method of minor appointments in the civil service which shall be "independent of personal or partisan influence."

The Postmaster-General has decided that upon all paper sent as merchandise there may be printed any matter not having the character of an actual or personal correspondence.

The Commissioner of Indian Affairs has made his annual report to the Secretary of the Interior. The whole number of Indians in the United States is 261,912, all of whom, except about 15,416, are more or less in charge of agents of the Government. The report urges a radical change of the Indian policy in some respects. The present system, the report says, never will and never can civilize the Indians. "If white men were treated as we treat the Indians, the result would certainly be a race of worthless vagabonds."

General Walker, ex-Superintendent of the Census, has submitted a statement to the Secretary of the Interior containing some interesting facts concerning the representation in the next House of Representatives. The total population of the States is 49,371,340. Upon this basis the following changes in representation would occur in the Forty-eighth Congress: Arkansas, California, Michigan, Mississippi, South Carolina, and West Virginia would gain one representative each; Minnesota and Nebraska two each; Alabama, Illinois, Maine, Maryland, New Hampshire, Ohio, Tennessee, and Vermont would lose one each; Pennsylvania two, and New York three. The other States would show no change.

The project of dividing the Territory of Dakota at the forty-second parallel and admitting the northern half into the Union as a State, is receiving considerable attention in Washington and in the Territory itself. Several of the "prominent representative men" of Dakota held a meeting at Fargo recently to discuss the projected division of the territory. Delegate Pettigrew made a speech, in which he said that during his travels throughout the Territory he had found the citizens all in favor of a division.

The three and a half per cent. uncalled bonds purchased in New York under the circular of November 4th not having reached the sum of two million dollars weekly, the Secretary of the Treasury authorized the Assistant Treasurer at New York to accept before Wednesday such additional amounts as would make, with what has already been purchased, four million dollars

The annual report of the Chief of the Secret Service Division of the Treasury Department states the number of arrests made to have been 279. The amount of counterfeit money captured aggregated $389,978.

Many letters of complaint have been received at the Treasury Department of late from the District Superintendents and Keepers of the Life-Saving Stations relative to the small compensation now allowed to the keepers. They only receive $400 a year, and they maintain that they cannot live comfortably on that amount, and many of them have declined to serve any longer. The attention of Congress will be called to the matter.

The Kennebec *Journal* has published what purports to be an "authorized" statement that Mr. Blaine will not be a candidate for any public office after he leaves the Cabinet, but will "devote himself entirely to his private affairs."

It is stated that President Arthur is not giving professional officeseekers much encouragement. There have been numerous attempts made of late to persuade him to remove postmasters on the ground that they were not "Grant Republicans." The President has stated in each case, in decided terms, that he did not see how that made any difference, and that such considerations would certainly not control him.

The French and American Claims Commission met on Wednesday, and granted leave to the claimants in twelve of the sixteen cases submitted to amend their memorials.

The National Tariff Convention met at Chicago on Wednesday last. Speeches were made by Congressman Aldrich and others, expressing sympathy with protection. A platform was adopted, which declares that the protective policy of the Government provided the revenue with which the Rebellion was subdued, revived the national credit, discharged in large part the national debt, quadrupled the industries of the country, turned the balance of trade steadily in our favor, and that, however well established our manufactures may be, a tariff for protection and revenue is still needed, that skilled laborers and producers may have constant and remunerative employment; recommends that American maritime property be exempt from the burdens of State, municipal, and local taxation, and that American vessels be made the carriers of American mails, at rates proportionate to the value of the services performed, without regard to the rates at which foreign vessels, subsidized by their own governments, may be willing to carry them, and that "the United States should regard an American commercial marine as an integral element of our American nationality." There was a large attendance at this meeting of men interested in the continuance of a protective tariff.

There were heavy storms in the West on Thursday and Friday. The rain washed out the road-beds of many railroads. Railroad communication between Chicago and St. Louis was practically cut off for a day or two.

The establishment of a new stock exchange is contemplated in New York by several large capitalists who are not satisfied with the management of the present board. The chief movers in the enterprise are said to be Messrs. Jay Gould, Cyrus Field, Russell Sage, and Sidney Dillon.

FOREIGN.

The German Reichstag was opened on Thursday. The Emperor was prevented by illness from being present, and the speech from the throne was read by Prince Bismarck. The speech says that the budget shows the gratifying results of the economic policy of the Government, and "emphatically points out" that the social evils are not to be remedied by repression alone, but rather by concurrent promotion of the welfare of the working classes. In regard to foreign affairs, the Emperor said that at no time during the last ten years could maintenance of peace be anticipated so confidently as at present. No allusion was made to the Liberal majority in the Reichstag. The 200 deputies present are reported to have listened with "icy coldness" to the speech, and not a single sentence was applauded. A Berlin despatch says that the general opinion in regard to the Emperor's speech is that it means "peace without and war within." Herr Levetzow, the candidate of the Conservative coalition, was elected President of the Reichstag, on Saturday, by a vote of 193 against 143 for Herr Stauffenberg, the Liberal candidate. The measures announced by the Government are these: the incorporation of Hamburg in the Zollverein; quadrennial Parliaments; biennial budgets; the Accident Insurance Bill, the tobacco monopoly, and the liquor tax.

A decree has been issued by the new French Government announcing the separation of the Ministries of Agriculture and Commerce, and pointing as an example to the United States and other countries which have made agriculture a distinct department. A London despatch from Paris reports that the retirement of General Chanzy and Count de St. Vallier, from the embassies at St. Petersburg and Berlin respectively, has produced a very unfavorable impression.

M. Gambetta has appointed M. Magnin to supersede M. Denormandie as Governor of the Bank of France. The shares of the Bank declined to 6,175 francs at the announcement of this change. A deputation of the Governing Council of the Bank had an interview with M. Gambetta on Saturday to endeavor to induce him to overrule his decision, but he replied that it was impossible to maintain at the head of such a great establishment a man who had taken up an attitude in opposition to a Republican government.

The appointment of M. Paul Bert as Minister of Instruction and Worship seems to have met with more disapproval in France than any of M. Gambetta's recent acts, and it is said that the defeat of M. Hérold, the Government candidate for Life Senator, which has since occurred, is regarded as a retaliation for the appointment of M. Bert.

It is stated that M. Gambetta, being desirous of participating personally in the conclusion of the Anglo-French treaty of commerce, has asked Sir Charles Dilke, British Under Foreign Secretary, for a delay of two or three weeks, after which he will be able to give his attention to the treaty; and that Sir Charles Dilke has agreed to the postponement. The Paris correspondent of the London *Times* says that accord now exists in regard to everything except woollens.

Continued fighting is reported to be going on between the Arabs and the French columns which are advancing southward. The Bey of Tunis has appointed Colonel Allegro Governor of Gabes and the district bordering on Tripoli. The latter is a personal friend and supporter of M. Roustan, the French Minister.

The Arabs who retired before the expedition to Kairwan are now reported to be ravaging undefended points on the coast.

The latest advices from Tunis report that the insurgent chief Ali Ben Amar, against whom the French columns have been operating with the intention of capturing him, has escaped to the South with his tribesmen.

Lord Granville has sent a despatch to Mr. Mallet, the British diplomatic agent at Alexandria, to say that the English Government is convinced that the tie uniting Egypt to the Porte is the best safeguard against foreign intervention, and that if this tie should be broken, Egypt "might soon be endangered by rival ambition." Sherif Pasha, the Egyptian Premier, has expressed his satisfaction with this communication, and has ordered it to be translated for publication in all the Egyptian papers. The elections for the Egyptian Assembly of Notables are said to have passed off quietly, and Sherif Pasha is reported to have expressed his satisfaction with the result.

It is stated that the want of discipline in the Egyptian army is increasing, and that if energetic measures are not soon taken, the Khedive's authority will fall to pieces.

Mr. James Caird, the President of the English Statistical Society, delivered an address before the Society on Wednesday, in which he said that for the last ten years, ending with 1881, 828,000 acres of grain land and 228,000 acres of green-crop land in Great Britain had been converted into permanent pasture, and that an annual return of £8,000,000 formerly derived from these crops had thereby disappeared. Mr. Caird attributed the agricultural depression not to American competition, but to bad seasons. He said that the burdens, difficulties, and uncertainties of American agriculture would always place it at a disadvantage with British agriculture in the British market.

Wednesday, the 16th inst., was the anniversary of Mr. John Bright's seventieth birthday. It was celebrated with much enthusiasm at Rochdale and elsewhere in England by the display of flags and the erection of triumphal arches. Mr. Bright delivered an address in the evening at Rochdale in which he alluded to the land question, saying that unless means were taken to stimulate production by putting increased capital and skill into the soil, there was no remedy whatever for the agricultural distress but a great and permanent reduction of rent.

Outrages of all kinds, from murder to cutting off the tails of cattle, continue in Ireland, and a Dublin correspondent says: "The most sanguine prophets of peace and order must be sadly disappointed at the present state of things and the prospect for the winter." The Ballina, County Mayo, Sub-Commission of the Land Court has pronounced several decisions, reducing rents, in a majority of cases, below the Poor Law valuation.

The Conservatives have won a victory in the election of Mr. Thomas Salt as Member of Parliament from Stafford, which has caused considerable surprise in England. The result is said to have been mainly due to the Irish vote, which until the night before the election had been promised to Mr. George Howell, the candidate of the Liberals and working classes.

The betrothal of Prince Leopold of England to the Princess Helena of Waldeck is announced.

There was a very severe gale in England, Scotland, and the south of Ireland on Monday. Many houses were unroofed and much damage was done. Part of the Caledonian Railway was washed away at Dundee.

There has been a great robbery at the Hatton Garden Post-office, in London. Registered letters, which are believed to have contained diamonds and watches to the value of £40,000, have been stolen.

The interesting debate in the Spanish Chamber of Deputies on the address in reply to the speech from the throne was terminated on Wednesday, and the address was adopted by a vote of 279 to 33. The last day of the debate was occupied by the Government in defending itself against the attack made upon it by Señor Canovas del Castillo. Premier Sagasta pointed out among other things that greater liberty of discussion was now allowed in Spain than when Castillo was in power, and contrasted the course of the present Government with the prohibition of a Republican banquet by Castillo. The debate which has just been closed has shown that the present Government has a very firm foundation in Spain, and that its liberal policy has enlisted in its ranks some of the ablest men of the Democratic party.

The declaration recently made by the Spanish Minister of the Colonies, that autonomy for the Island of Cuba was an impossibility, and the unanimous approval of this declaration by all parties in the Cortes, have caused a great sensation in Cuba. It is regarded in most quarters as very discouraging to the friends of the Home Rule movement. Several members have advocated the dissolution of the party.

In the Dutch Chamber of Deputies on Monday the Minister of Finance said that, pending the result of the monetary conference in April, he could not propose measures to check the outflow of gold. He added that if the conference did not succeed in securing the adoption of bimetallism, Holland would be obliged either to demonetize silver at an enormous cost or revert to a simple silver standard.

The accounts of the Russian Department of State Control show that the budget for 1880 resulted in a deficit of 50,308,000 roubles as compared with the estimates. The deficit was chiefly caused by extraordinary military expenditure.

A fresh number of the Nihilist organ made its appearance recently in St. Petersburg. On the title-page was an editorial paragraph, surrounded by a deep black line, in which the crime of Guiteau was condemned in the strongest language.

Signor Depretis, President of the Council, stated in the Italian Chamber of Deputies on Sunday that the Government had not yet discussed the proposal of the Minister of War relative to the completion of the army organization, but that it hoped to be able to provide gradually from the ordinary estimates for the increase of the active army and for indispensable works of territorial defences.

A despatch from Constantinople says that two thousand sailors of the Turkish navy have been dismissed and that several ironclads will be dismantled.

The reduction of the Greek forces in Thessaly to a peace footing has been ordered.

Count Kálnoky, late Austro-Hungarian Ambassador at St. Petersburg, has been appointed Austrian Minister of Foreign Affairs.

It is reported that the complete annihilation of the village of Elm in the Canton of Glarus, Switzerland, from a land slide, appears to be only a question of time and bad weather, for the summit of the peak nearest the village is moving.

The Bavarian Ministry has refused to advise the Crown to give effect to a resolution of the Chamber of Deputies in favor of the repeal of the obligatory civil marriage law.

The Chilian Minister of Foreign Affairs addressed a letter to General Kilpatrick, the United States Minister to Chili, in regard to General Hurlbut's course in Peru, and General Kilpatrick in his reply categorically contradicted General Hurlbut, and assured the Chilian Minister, "in the most emphatic manner," that his Government had nothing to fear from the intentions or attitude of the United States with respect to the war in the Pacific.

The Mexican town of Manzanillo was completely destroyed on the 26th of October by a storm. The loss is estimated at $500,000, independent of the shipping destroyed.

TUESDAY, November 22, 1881.

THE GUITEAU CASE.

From what has already taken place in the trial of Guiteau, it is evident that the imposing solemnity which most people probably anticipated for the proceedings will be wholly wanting, at least as long as Guiteau is allowed to remain in court and continue his farcical and wild interruptions. Judge Cox has announced that if he does not keep quiet, he will be removed from the court-room, and such a removal would certainly, on appeal, raise the question, often settled before now in favor of accused persons, as to the common-law right of the prisoner to be present during the entire trial. This right is not a technical one, but is founded on the idea that natural justice requires that the witnesses for the Government should be confronted by the man against whom they are testifying. There are, however, one or two important considerations which will have to be taken into the account before it is decided that this is an absolute right in Guiteau's case, the denial of which would vitiate the verdict. The first requisite for the administration of justice is an orderly trial. A trial in which a prisoner should be allowed freely to interrupt witnesses, browbeat the judge, and reprimand his counsel, and insist on their retiring from the case, would not only be a farce, but would tend really to confuse the minds of the jury about the facts of the case, and as to what was in evidence and what was not, more than the charge of any ordinary judge could enlighten them. Therefore it seems to be evident—though we do not know that precisely this case has arisen before—that with such a defendant as Guiteau, supposing him to remain violent, the rule as to the presence of the prisoner would have to give way to the necessity of having a decent and orderly trial.

It should be observed, also, that Guiteau's behavior in court is either the result of insanity, or the result of an attempt to simulate insanity. His counsel says that he is insane, and if he is, his right to be present in court for the purpose of confronting witnesses against him is of little value to him.

A third reason for not regarding the right as of so much importance as formerly is, that it has been handed down to us from a time when accused persons had no right to counsel, and when consequently their right to be present in court, and not only to confront but to cross-examine the Government's witnesses, was of the last moment to them. Now that the protection of persons on trial is carried so far that the Court itself assigns counsel if they have none, the prisoner has, if he is wise, as little to do with the actual trial of the case as possible, beyond making suggestions to his counsel as it proceeds.

Nevertheless, although these considerations show the right to be of very little practical value to a prisoner as violent and unreasonable or insane as Guiteau, it must be admitted that the right has generally been treated as an absolute one, and it is therefore, to say the least, doubtful whether the exclusion of Guiteau from the court-room would not result, as he himself insists, in a reversal of any verdict against him, and it is this which makes Judge Cox so unwilling to order it.

Mr. Scoville, who is evidently heavily handicapped in the trial by his want of experience, gave notice last week that, his defence being insanity, he should insist that the burden of proof with regard to this was on the prosecution, and that if the Government intended to introduce evidence on this point, they must introduce it before they close their case. Stripped of technical verbiage, this means that the prosecution must show that Guiteau not only killed the President, but was sane at the time. But what is meant by the "burden of proof" being on the Government is merely that they must satisfy the jury beyond a "reasonable doubt" that the defendant is guilty. This is done when the fact of a deliberate killing is established. Insanity, like any other affirmative defence, has to be established by the accused. A really nice question with regard to this branch of the case is whether a "reasonable doubt" solely as to insanity is enough to require the jury to acquit. Supposing at the end of the trial the jury, as reasonable men, entertained a doubt whether, at the time of the killing, Guiteau was or was not sane, would he be entitled to an acquittal? As to this the law is decidedly in the prisoner's favor. A reasonable doubt as to insanity is a reasonable doubt as to guilt. On the other hand, in considering the question of the preponderance of evidence, it is always well to bear in mind the amusing illustration once given by an English judge, in telling a jury that they would probably be told by a lawyer in a case then on trial, that there was "some evidence" in his favor. This, the learned judge said, was true. So, he continued, if in a suit on a bill of exchange, six witnesses were to swear that they had seen the defendant sign it, and six others swore that they had heard him promise to pay it, while one old man, who had not had anything to do with the defendant for many years, swore that he had some question as to the handwriting of the signature, "there would be, gentlemen, *some* evidence for the defendant, but it would not be important for you to consider it." In Guiteau's case, the amount of evidence required to establish the fact of insanity, or in other words to prevent a "reasonable doubt" of guilt, is not different from the amount of evidence required to prove any other fact in a court of justice.

The trial has already brought out one fact clearly with reference to criminal procedure of no small importance to the public—and that is that much of the scandalous delay and expense which such cases always involve, arises from the retention of an antiquated system of pleading. Guiteau has only one substantial defence, which is insanity, but instead of being obliged, as he would in any other kind of proceeding, to admit the killing of the President, and set up his affirmative defence, leaving this as the sole question to be tried by the jury, he is enabled, merely because he pleads "not guilty," to force the Government to summon a number of witnesses, and waste valuable time and money, simply for the purpose of proving a notorious fact which he does not even deny. In civil proceedings it was just such absurd results as this which led to the abolition of the old system of pleading, and there seems to be no reason why, in criminal cases as well, the defendant should not be compelled to set up in his plea precisely what his defence is: whether he admits the fact of the killing, and insists that it was done in self-defence, or from an insane impulse, or how. In fully half the cases of murder which get into the courts there is no dispute as to the main facts. The only question which the jury has really to decide is some affirmative defence set up by the prisoner. It is said in the present case that Guiteau's counsel think the circumstances connected with the killing indicated insanity. But if so, why should they not show the circumstances themselves? No hardship is imposed on anybody by requiring him in a court of justice to admit or deny facts within his own knowledge; and there is obviously something so farcical about a solemn inquiry whether District Attorney Corkhill can make out that Guiteau actually shot the President, that there ought to be some better reason for the continuance of a system which makes it necessary than mere respect for tradition.

WHY DEMOCRATIC MANAGEMENT IS IMBECILE.

What we may almost call the usual post-election lamentation of the Democratic newspapers over the management of the party has already begun. One of the ablest—the Buffalo *Courier*—asks pathetically whether "there is not some degree of imbecility about the management of the Democratic party." The answer must be that though there may be some imbecility about it there is not nearly so much as sometimes there seems to be. What the Democratic party is suffering from is rather its own want of principles than the mistakes of its leaders. There is no use in calling on party leaders for a policy: they cannot make a policy out of nothing. The policy of a party is the means by which its managers seek to embody its principles in legislation. If there are no principles which the party seeks to embody in legislation, there can be no policy; the leaders have no materials to work with. They have of course to keep up some appearance of activity, but this is hardly worth criticism, any more than a man's movements in keeping his feet warm while waiting in cold weather.

The Democratic party is in fact in the condition through which the Conservative party in every country has now and then to pass. It is like the Conservative party everywhere, rather a party of temperament than of ideas. Men belong to it, not because they think alike on any subject, but because they feel alike about all change. Its members desire nothing so much as to be let alone. The ordinary result of this is simple sluggishness; and if there were no Republicans or Liberals or Progressists or Radicals in the world, Conservatives would pass life in a long lazy afternoon. But the Liberals do not stay quiet. They are constantly trying for change. Once in half a century or so they bring about, or seem to be on the point of bringing about, tremendous changes. When this crisis arrives the Conservatives rouse themselves, produce platforms, give out that they too have a creed and plans about the world's future, and that it is

to them the nation must look for real improvements. This activity lasts till the changes are accomplished. Resistance is then useless, and it appears plainly once more that the Conservatives really had no plan at all, and nothing to rely on but the half-physical dislike of the party to movement.

The English Conservatives are in just the same plight at this moment as our Democrats are. They have no principles, and therefore no policy, and the Liberals have won in the late struggle. The result is that the Conservative leaders seem imbecile, and are casting about for something which they can call the Conservative creed, but find nothing, and will find nothing until the Liberals propose something new. The party management will always seem foolish until there comes up from the rank and file the force and impetus of some great desire. A great popular desire is to party management what "way" is to a ship. There can be no steering unless there is motion, and motion the man at the wheel cannot supply There are many good questions lying about which the Democratic chiefs might and would turn to good account if the voters of the party felt any interest in them. The trouble is that there is apparently no question about which they care at all. Mr. Pendleton, for instance, is laudably busy about civil-service reform, but how much support does he get from his party? Then, again, the leaders are abused for playing fast-and-loose with the question of free trade, but of course they would not think of doing so if the main body of the party cared anything about free trade. In short, they find themselves catering for a master who is not hungry, and feels a little sleepy, and dislikes noise, and yet does not like to see his servants idle.

RESPONSIBLE GOVERNMENT IN GERMANY.

THE radical difference between the constitutional system of Germany and that of England could scarcely have been put in a stronger light than by the Emperor's speech at the opening of the Reichstag, and the construction given to that speech by the official press. The *North German Gazette*, known as Prince Bismarck's organ, announces the measures recommended in the speech from the throne—the tobacco monopoly, the workingmen's insurance by the state, the biennial budget, etc. —as "the Emperor's programme," whereupon the Liberal press unanimously express regret "that the august person of the sovereign has thus been put forward in opposition to a majority of the nation in favor of Socialist and political projects for which Prince Bismarck ought himself to assume sole responsibility." An attempt to protect a Minister by shifting the responsibility for his measures upon the sovereign would be looked upon in England as a violation of the most fundamental principles of the Constitution. The Liberal press in Germany evidently seeks to put its disapproval of the Emperor's and the Chancellor's assumed relations on the same ground. It would be right in doing so if in Germany the same system of ministerial responsibility existed. But it does not. While in England the Ministers of the Crown are held responsible to Parliament, being subject to a vote of the Parliamentary majority, under the Constitution of the German Empire the Chancellor is responsible only to the Emperor, no matter whether the majority of the Reichstag be for or against him. In this respect the German system bears a certain resemblance to that of the United States, where the Ministers are not, as to their measures, subject to a majority of Congress, except in cases of impeachment—with this fundamental difference, however, that the heads of the executive departments are in the first place responsible to the President, while the President is responsible for the conduct of the executive branch of the Government generally, holding his office only for a stated term, and also subject to impeachment, which the Emperor of Germany is not. And as the Emperor is responsible to nobody, no system of personal responsibility really exists under the Constitution of the Empire. It is clear, however, that under such circumstances the Emperor, like our President, may do what the Queen of England cannot do: announce certain measures of policy as his own personal programme without violating any principle of the German Constitution.

While for this reason it would be wrong to condemn the attitude in which the Emperor has been placed, on the ground of the Constitution as it is, the German Liberals are clearly right, in view of what the Constitution ought to be, in saying that the responsibility for the declarations of the Emperor's speech should be assumed by the Minister who originated the measures which that speech recommends. It is not at all improbable that this occurrence, which has put the irresponsible character of the Imperial Government in so glaring a light, will serve to make the question of the constitutional responsibility of Ministers again the subject of debate and agitation. We do not mean to say that such an agitation would be likely to lead to immediate results. It is, indeed, apparent that when Prince Bismarck feels himself obliged to seek support for his measures by entrenching them behind the venerable figure and the popularity of the Emperor, he must think his own popularity and power over public opinion no longer strong enough to secure their success. Nor is it likely that by such a manœuvre the popular or Parliamentary opposition to the Chancellor's measures will be overcome. The same trick was tried during the campaign which preceded the elections, when the people were told every day by the organs of the Government in the press and on the hustings that every vote against the Conservative candidates would be a vote against the Emperor, and still the Liberal Opposition gained ground constantly. And now it is well enough understood that it is the Chancellor's programme for which the Emperor is merely serving as a breastwork. The Emperor's proclamation will therefore be less calculated to strengthen the Minister than to weaken himself.

But, after all, as long as the Emperor lives and Prince Bismarck holds sway under him, the agitation for constitutional reform will scarcely result in a movement strong enough to overturn their favorite principles of government and to put in their place a system with which they think they cannot carry on the affairs of the Empire. The popular respect for the person of the aged monarch and for the eminent services rendered by the Chancellor, as well as the belief in the latter as the "necessary man" to conduct the foreign policy of Germany, are still too strong to encourage a movement which, to succeed, must not shrink from general and uncompromising hostility to them. But the Emperor is old and cannot in the course of nature hold the reins much longer. Whether his successor would be as firmly wedded as his father to the system at present existing, and whether under him Prince Bismarck may hope to wield the same power with the same devoted support of the sovereign as heretofore, is at least questionable. It is popularly believed that he would not, even if he were to remain in his present position, and this popular belief will be sufficient to stimulate to fresh, more vigorous, and more hopeful efforts the aspirations for a government of constitutional responsibility, the want of which has now become once more so strikingly apparent.

THE RELIGIOUS CRISIS IN FRANCE.

THE news of the rejection by the Senate of M. Hérold, the Government candidate for a life Senatorship, seems to indicate that the majority in the Senate is not afraid of the "revision" which M. Gambetta threatens, and was ready for a conflict with the Ministry almost as soon as the Cabinet was announced. That the Senate does not shrink from such a conflict can only be accounted for by remembering that the revision scheme was distinctly defeated at the last election, and that it is still extremely doubtful how M. Paul Bert's appointment to the Ministry of Instruction will be received by the community at large. If Gambetta has made a mistake in this appointment, it is an immense mistake, from which his Ministry cannot recover. If he has not made a mistake, it will show that the attitude of the French people toward religion has undergone modifications of which most recent observers, whether native or foreign, have not dreamed.

That the country was prepared for taking education out of the hands of the clergy altogether, and for making the district schoolmaster independent of the parish priest, was shown clearly enough by the indifference or approval with which the expulsion of the teaching religious orders was received. But the Bert appointment goes far beyond this. It indicates the settled hostility of the Government to religious teaching of any kind, and its determination not simply to refuse it to the children, but to prevent their receiving it, as far as its influence goes, from any quarter. M. Bert has been as outspoken in his hostility to religion as Colonel "Bob" Ingersoll, and then he is a scientific man of considerable eminence, so that his words have a weight which is denied to those of an itinerant humorous lecturer. To put him in charge of the French schools is, therefore, either to assume that every government which has reigned in France since

Napoleon became First Consul has been mistaken in supposing that strength with the people was to be got from an alliance with the Church, or that a very remarkable change, of which the knowledge has been hitherto confined to M. Gambetta and a small knot of his friends, has since 1871 taken place in the feelings of the French people in a matter that has hitherto played a very prominent part in the national existence. The Republic of 1848 made peace with the Church one of its first objects, and in the interest of this peace undertook the nefarious expedition to Rome; and the Empire, as we all know, made clerical support one of its great buttresses, not because the Emperor had any more religious faith than Gambetta, but because the clergy were supposed to be able to influence votes. The Monarchists, too, who held power under republican forms down to 1877, acted on the same theory, and in the opinion of most foreigners acted wisely.

If it should now turn out that Gambetta is right—that the French people are ready for Paul Bert as Minister of Instruction, and for schools as secular as he thinks they ought to be—it will be in some ways the most momentous "new departure" the French nation, or for that matter any nation, has taken since the first Revolution. It cannot but have a profound influence on the other Latin countries, and notably Italy and Spain, and must before very long lead to successful attack on the clerical stipends now paid by the State. The suspension or even serious diminution of these stipends would, in form, be only the substitution of the voluntary system for a state church. In reality it would, as every one knows, be the extinction of religious worship over a very large part of France, if not now, before very long. We should then witness the trial of an experiment which has long been talked about in religio-scientific discussions, but hardly anticipated in our time—the experiment of supplying a nation with its morality without even as much religious aid as comes from formal service in churches.

THE "PLUNGER'S" RETURN.

During the past racing season an American made his appearance in England whose career there has created an unparalleled amount of excitement and curiosity. The newspapers have recorded his movements from week to week, and day by day; scathing articles have been written denouncing him, and philosophical articles explaining him; a popular nickname has been found for him; dismal prophecies have been made with regard to his future, and ingenious legends invented as to his past. Crowds have collected to see him when he went out to take a walk, and altogether as much attention and speculation have been lavished upon him as if he had been a distinguished public character or a notorious criminal. His time has been occupied while in England in betting on horses. What made him occupy so large and important a place in the public eye was that he bet very large sums, in other words "plunged" heavily, and that he appeared, notwithstanding this, to win. Anybody who has a large amount of money can easily be a "plunger," but to "plunge" and win is contrary to the traditions of the English turf, for very good reasons. The book-makers, against whom every "plunger" stakes his money, are the capitalists of the turf, and have not only unlimited supplies of funds but the accumulated knowledge and experience of a regular business. The chances are all in their favor just as the chances are in favor of the bank at Monaco, or against the "lamb" in Wall Street. They live by book-making, and their profits are, economically considered, governed by the same causes as those which regulate the profits of any other extra-hazardous business.

When an American, therefore, appeared in England and began betting large quantities of what was known in the slang believed in England to be American as his "dollars" on American horses, it was deemed certain that, whatever his temporary winnings might be, he was destined in the end to go home bankrupt, and the book-makers accordingly made him welcome in the spirit in which Captain Rook makes welcome his dear young friend Mr. Pigeon. But when, instead of losing, he continued to win heavily, and, as the turf is the great national sport in England, to become an eminent person, their feeling about him began to change, and the most searching inquiries were instituted as to his origin, sources of revenue, and the probable length of his purse. Very little could be found out about him except that he was an American, but a legend soon sprang up to the effect that he was the agent of the owner of one of the American horses, this owner being a gentleman who carries on his operations in Wall Street, and is recognized as a "monopolist." If the English book-makers had known what a Wall Street "monopolist" is—how he is able, by putting this stock up or the other stock down, or by cornering wheat, or iron, or lard, to take out of the pockets of the business community just what sums he pleases; how his "squeezing" power is limited simply by his own sense of justice or mercy—they would never have gone on betting with the stranger after they had discovered, as they thought, that he stood in the relation of agent to one of this class. But, not knowing much about it, they went blindly on, thinking that he or his principal must eventually come to the end of his rope. Meanwhile the mystery of the "plunger's" success led, as any such success always does, to the belief among the innocent public, who were parting with their spare cash to the book-makers from whom he was winning it, that he must have some secret or system by means of which he was enabled to defy ordinary rules and make sure of success in advance. On the other hand, the fact that he was observed to be on remarkably intimate terms with the jockeys led to the circulation of an unpleasant rumor that he was not giving the book-makers a "square deal." He, however, being aware that envy and calumny always follow in the path of success, paid no attention to this idle gossip, but continued to bet assiduously and to win continuously.

He has now returned home and has given to a reporter an account of his operations on the other side, which shows how curiously simple they really were. He is, it seems, no agent of a monopolist, but, as he says, a plain business man; in fact, a "hotel proprietor," who does not like to have his "outside operations of this kind heralded about any more than any other man." He makes a public statement of them now, he says, simply because they have been much talked about, and "they may as well be put straight." He did then, as a matter of fact, get away with £93,000 of British gold, or nearly half a million in our money—an addition, by the way, to the wealth of this country as well as his own fortune of which no true American can complain, as it calls for no export of bonds, or manufactures or grain in return. The explanation he gives of his success is that he beat the English book-makers at their own game simply by making a better guess as to which was going to be the winning horse than they did. The chances of any one horse winning in the same season three of the great English races are so remote that it would have been considered perfectly safe to predict that a "plunger" who should take such a risk would be absolutely ruined. But this was just the chance which he did take, and he won by it £75,000 of his £93,000. As to bribing the jockeys, he says that he only promises a large sum to a jockey to win, if he has a large amount on the horse he is to ride. According to turf ethics we believe this is allowable, while giving money to a jockey to lose a race is of course a fraudulent proceeding. This the "plunger" says he never does.

He gives a most amusing and at the same time pathetic account of the ingratitude of Sir John Astley, a well-known sporting baronet, who, after imploring the "plunger," not in vain, to make bets with him, which, presumably, turned out to the baronet's disadvantage, suddenly turned upon his benefactor and asked him in very profane language why he did not stay in his "bloody country." To this the "plunger" replied with the dignity and forbearance that seem to have marked his behavior throughout, that he supposed that England was a "free country," and that "when the numbers go up it's public property." On this Sir John broke out more offensively still, again suggesting a return to the United States, upon which the "plunger" turned his back upon the baronet, and has "never spoken to him since," and "would not any more than to a dog."

It will be seen that the reality falls far short of the legend. There is a painful descent from romance to prose when, after reading the brilliant writing about the "plunger" which has been produced during the summer, we find that Mr. Walton is commonly known here as "The." Walton, and is obviously simply a book-maker himself, who has had the advantage of an extraordinary run of luck. He has established himself, however, in the imagination of the English public as a new American type—the quiet, silent American, whose origin, means of livelihood, and connections are all involved in profound mystery; whose resources and nerve are unlimited; a gambler by nature and habit, who wins or loses with an unruffled countenance, but who in the end always wins more than he loses—a sporting man of destiny—something that suggests Phileas Fogg and "Fresh, the American," but which is neither—a type admirably adapted to the stage, and one that we shall without doubt see on the stage before long, where his purse will be even longer than that which "The." has brought home with him, and where its contents will be used, not merely as a fund for more extensive "outside operations," but, as the ethics of the stage demand, to ruin the wicked and to help the good.

THE DARK SIDE OF GERMAN PROFESSORIAL LIFE.

In the introduction to a collection of Kayser's 'Homerische Abhandlungen,' Prof. Usener, of Bonn, an old pupil of Kayser's, has given some details as to the life of his teacher (born 1808, died 1872) that are not without interest. To most scholars Kayser is known chiefly as the editor of Philostratus; and who troubles himself much about the private life of editors and professors? Sometimes word reaches even the American public of a grand festival in honor of a Böckh or a Wöhler, of a torchlight procession, a memorial medal; and the weary and un-

recognized worker on this side of the water thinks that it would not be a bad thing to live in a land where scholarship and science are thus honored, where birthdays are observed—a land of jubilee celebrations and professorial glorifications. But that is only one side. There is another, not so cheerful, on which Prof. Usener's memoir of his friend throws a sinister light. "Kissing goes by favor" in the academic circles of Germany as elsewhere. When a man is Privy Aulic Councillor and Chief Librarian, it is a matter of expediency, if you are going to use the library and apply for a degree, to attend one of the pay courses of that high and mighty official; and if even a slight knowledge of the world did not make that evident, Prof. Usener has given us an instance from his own experience. On the other hand, patient merit often fares badly in the land of scholars; and the innocent student from America is surprised to find when he reaches Germany how many names of wide echo here have no mercantile value there, and that teachers whom he had learned to respect in their books are kept down to subordinate positions in their universities. Kayser's fortune is a case in point, and may be worth remembering.

Prof. Usener tells us that when he began his philological studies at Heidelberg—in the first half of the fifties, as we gather—philology was in a deplorable state at the Carolo-Ruperta. There was but one man of any value, and he was Kayser. The magnates of philology were Bähr and Zell. Zell was notoriously lazy, and his scholarship suffered from fatty degeneration. Bähr, the author of a big 'History of Roman Literature' and of a big edition of Herodotus, was considered in certain philological circles, as far back as thirty years ago, a portentous humbug. Indeed, it was about that time a current saying, caught up from some acrid professor, that "God in his wrath had made Bähr a philologian." Certainly Bähr must have been a strange anachronism at a time when the Bonn school of philology was in full bloom. In German universities the conduct of philological training is assigned to the heads of the *seminarium*, and the following is in substance the account of the Heidelberg *seminarium* work as given by Prof. Usener: The Privy Aulic Councillor and Chief Librarian, Christian Felix Bähr, met his pupils twice a week. At one meeting he interpreted Plutarch, at the other he gave alternately a Greek and a Latin exercise. The Greek exercise, "instituted mainly for the sake of practising the young men in Greek accentuation," consisted in a retroversion of Lucian's "Uneducated Bibliomaniac"; the other exercise was a gymnastic in "Latin stuttering"—two unhappy disputants being required to discuss such themes as "Whether Cæsar or Alexander had the better right to the name of 'the Great'?" Zell, antiquarian and epigraphist, whose lazy *insouciance* it is not necessary to characterize further, "slumbered and slept, standing and talking." Kayser's work was stimulating and fruitful, for he had charge of a part of the *seminarium*, though his official position did not seem to warrant such an employment.

Kayser had been an active teacher in the University of Heidelberg as early as 1833; he was associated with magnates Bähr & Co. in the conduct of the seminary in 1835; he was made professor extraordinary in 1841; and yet for twenty-two long years did this devoted and meritorious scholar work for the university before anything was voted him, and then a miserable annual stipend of 600 gulden. Thirty-one years had he been a university teacher before he attained a full professorship and a decent income—only eight years before his sudden death. Prof. Usener warms as he writes of the injustice done to this excellent scholar, and we must accept his verdict. Generally it is possible to read between the lines: the man of genius may be impracticable; the man of learning may be given to drink; but in this case there seems to have been no mental or moral fault. Yes, there was one, which his biographer frankly states: "Nature had denied Kayser elbows"; he had no push, and nearly all his life he was dependent on somebody. Kayser was twenty-five years old when his father died. An American boy would have made himself some position by that time, but in Germany that is over-young for a professional man or scholar to stand on his own feet, and we find Kayser acting as teacher in a boys' boarding-school managed by his mother. This school was kept up three years after her death, and Kayser was then a man of forty-four. It must have failed after the strong hand of his mother was withdrawn, and in order to support the establishment Kayser's wife opened a girls' school, and Kayser became quasi-dependent on his wife, as he had been on his mother—the university meanwhile saving its florins. The wife got tired of her unsuccessful husband—at all events, "the reversal of the natural relation of supporter and supported" led to much unhappiness, which issued in a divorce. A later marriage brought sunshine to the close of a life that was singularly unfortunate.

In England Kayser might have been made a bishop. Perhaps he was better off as it was. In America such a career is hardly possible for a native, and yet is worth a moment's attention. Many of our young scholars, in the press of competition, now so much hotter than it was two or three decades since, are restless and unhappy because they do not get on. What are their brief delays in comparison with the hard road of elementary teaching, of review writing, of feminine supervision that this man of profound and wide erudition had to traverse? The writer of these lines has often occasion to take up Kayser's Philostratus, and will never handle the volumes again without kindlier thoughts of the luckless editor, and sympathy with the noiseless tragedy of his life.

EGYPT.—THE RELIGIOUS AGITATION.

ALEXANDRIA, October 30, 1881.

THE main topic of interest during the past week is what appears to be, or threatens to be, an internecine war between the press and the new Government of Sherif Pasha. As the facts of the pending controversy are an instructive comment on the present state of the country, it is worth while recording them with some particularity of detail.

It must be premised that the daily paper styled *L'Égypte* has been managed for some time past by M. Gustave Laffon, a French citizen, and that while it has undoubtedly always exhibited hostility to Sherif Pasha, both before and since his advent to power, it has also, even in the opinion of its English rival, the *Egyptian Gazette*, been by far the best newspaper which has ever appeared in Egypt. On the 2d of this month *L'Égypte* published a lengthy extract from Langlé's and Jomard's 'Histoire d'Égypte.' In the course of this extract, which was nothing more than a brilliant and impartial review of the relations of the Roman Empire and the Arab Caliphate to Egypt, occurred the following passage: "Il faut moins reprocher à Osman, fanatique héritier d'un faux prophète, d'avoir fait brûler la bibliothèque d'Alexandrie, qu'à ces Romains civilisés de s'être montrés presque indifférents aux doctes souvenirs de l'Égypte." By a misprint the name *Osman* was substituted for *Omar*, and three weeks after the passage appeared in the newspaper, that is, on the 25th, the Minister for Foreign Affairs warned the manager that the expression "fanatique héritier d'un faux prophète" was calculated to wound the religious susceptibilities of the majority of the inhabitants of the country, and could not be put up with. The next day, the 26th, the paper was suppressed.

The manager of the paper, M. Laffon, complains of this precipitate action of the Government as a monstrous outrage not only on the liberty, and even on the possibility, of the public press in Egypt, but on the common rights of all foreigners sojourning in the country. He further charges the Foreign Minister with wholly misinterpreting the purport of the passage objected to, and alleges that the incriminating words were fished up three weeks after their appearance, from a desperate eagerness to find a plausible pretext for suppressing an organ personally obnoxious to himself. On the legal side, M. Laffon holds his ground to be equally unassailable, and intends to bring the matter speedily before the mixed International Tribunals, as well as to promote a discussion on the subject in the French Assembly. M. Laffon urges that, while the "Ottoman Constitution of the 11th of December, 1876," proclaims the "liberty of the press within the limits traced by law," by the Egyptian Press Law of January 1, 1865 (except in cases of proved complicity in criminal offences against the public peace of the Empire), no journal once officially authorized can be interfered with otherwise than by a month's suspension at most, unless within a space of two years it has three times been judicially condemned.

To understand the whole of these proceedings it is necessary to notice that since the *émeute* of the 9th of September and the change of ministry, there has been a conspicuous activity in the Arab press, and that it has been exhibiting a restless impatience under the European control which might considerably complicate the action of the Government. During the past fortnight *L'Égypte* has been in the habit of making a series of translated *verbatim* extracts from the vernacular organs published here and in Cairo. It is difficult, as yet, to say whether the language of these journals is directed to the object of fomenting disquiet and antipathy to foreigners, or whether it is the spontaneous outcome of widespread and deeply-rooted aversion to the *status quo*. The sort of utterances with which these papers abound are to the effect that Egypt is overridden by over-paid and over-petted foreigners; that the country could get on in every way better without them; that even in manufactures and in the construction of machinery the native Egyptian now needs no further instruction or aid from Europeans; that all Moslems ought to combine to establish that true civilization comes from the East and not from the West; that the fate of India, of Algiers, of Tunis, and of the provinces of European Turkey, is a warning of what the faithful have to expect from the infidel if they do not aggregate themselves together under their natural head, the Sultan, and resist all present and all future invasion of their religious and national liberty; and that their best, or only, friends are the patriotic soldiery.

In such a country as Egypt, destitute of the very semblance of constitutional government, such language, when habitually repeated in the organs of the press and greedily devoured by readers of all classes all over the country, must either be overtly assumed by the Government as part of their programme or distinctly repudiated and peremptorily suppressed. What has been done is this: Sherif Pasha has addressed a warning to all the Arab newspapers, cautioning them against unfriendly

comments on foreigners and interference with questions of public policy, and specially forbidding their meddling with religious topics. It is premature at present to say whether this general warning is seriously meant or not. If Sherif Pasha himself has any stability of purpose—for which his character is not great here—his professed wish to repress newspaper extravagances in any direction whatever is probably genuine, because a strong government can only trust to perfect liberty (which, in the absence of anything deserving the name of a constitution, is out of the question), or to the entire subservience to itself of all organs of public opinion. Sherif Pasha has also addressed the same general warning to the English organ, and, as has been seen, has suppressed the French organ. What will come of this feud—a strengthened government, a change of Ministry, or a new revolution—will appear shortly. A.

CAIRO, October 28, 1881.

LAST Saturday I was present at a ceremony that recalled what many an Arab or Turk would call the good old days of infidel persecution. I refer to the Khedive's formal reception of Mr. Simon Wolf, the newly-appointed Diplomatic Agent and Consul-General of the United States.

At the close of the thirteenth century the Mameluke Sultan Mohammed Melek el Nasser ibn Kalaoon, the then ruler of Egypt, decreed that any Christian or Jew who was seen riding a horse or mule, wearing a white turban, or bearing a scimitar or other weapon, might be lawfully plundered and killed; that all Christians should wear the blue turban, and that all Jews should wear the yellow turban; that Christians and Jews should ride neither horses nor mules, but only donkeys, and with their faces to the animal's tail; and they should not enter a public bath unless with a bell suspended at their necks. Jews were detested by the Moslems far more than the Christians, and were regarded as so unclean that their blood would defile the sword. For this reason they were never beheaded, but many a Jew has been hanged upon a false and malicious accusation of uttering disrespectful words against the Koran or the Prophet. They used to be severely beaten merely for passing on the right hand of a Moslem. I have frequently noticed that when, as is often the case, the Arabs apply their copious vocabulary of oaths to their beasts of burden, the two words, "Noozraneh" (Christian) and "Yahoodeh" (Jew), seem to constitute a climax. No stronger epithet for expressing contempt and abhorrence being known, a temporary but gratifying silence ensues.

The decree of Melek el Nasser was not repealed until the accession of Mehemet Ali in 1801, who added force to its revocation by instituting the custom of presenting a handsomely-caparisoned Arab stallion and a Damascus scimitar to every duly accredited diplomatic representative of a Christian power; thus formally reminding them that they and their countrymen were no longer prohibited from appearing on horseback or wearing a sword in Egypt. As the trappings of the steed were often studded with precious stones, the American Government forbade its representative to accept such costly gifts, but made exception of the scimitar, which was supposed to symbolize sufficiently the emancipation of Christians. All the representatives of other powers accept the horse and trappings also, and the ceremony of presentation is still rigidly observed, and takes place in the presence of the Khedive and full court in gala array. Last Saturday there was special significance attached to the ceremony from the fact that the present Consul-General of the United States, Mr. Simon Wolf, is the first diplomatic envoy in Egypt who has happened to be of the Jewish religion since the days of the Pharaohs—since perhaps Moses, who was certainly a duly accredited agent to the court of King Menephtah of the XIX. Dynasty, who reigned, according to Brugsch, 1300 years before Christ.

The action of the United States Government in confiding the Egyptian mission to a prominent American citizen of the Jewish religion has called forth the warmest approbation from one and all, including the Khedive, who thus sees and appreciates an example of religious liberty, and who, as his Highness himself stated in a recent conversation, now makes the United States his model in matters of conscience and toleration. The following is a translation of the address delivered by the Khedive upon the occasion of Mr. Wolf's reception, at the close of which a salute of twenty-one guns was fired from the Citadel:

"I attach all the more consideration to the signature on your letters of credence, inasmuch as it is that of an eminent man who fell a victim to a deplorable attempt at the very time when he was giving the most manifest proofs of an ardent devotion to his country. I can appreciate your feelings in recalling this painful event, which has caused great emotion throughout the world—an emotion in which my country has joined, united as it is to yours in the bonds of a long and sincere friendship.

"It is, therefore, with true sympathy that I reply to your words, as well as to the good wishes you have been good enough to express in the name of the United States, and it will be with zeal that I will second your efforts to develop, under the influence of the new President of the Republic, the cordial relations established between Egypt and the great American nation, which, young as it may be, has, some time ago, taken its place in the first rank of the most advanced in the paths of progress and civilization."

While speaking of United States representatives in Egypt, it is difficult to pass by in silence the splendid market which Egypt and this part of the Mediterranean offer to American merchants, capitalists, and manufacturers. The average yearly importation of one single article, cotton goods, at the ports of the Eastern Mediterranean and the Black Sea, amounts to nearly $60,000,000. Of this merely an infinitesimal portion comes from the United States. England now possesses 63 per cent. of the foreign trade of Egypt; France, 13 per cent.; Italy, 7 per cent.; and the United States, one-half of one per cent. There are certainly no serious obstacles to the profitable introduction of American cotton goods, implements of agriculture, sewing-machines, etc., provided our merchants will only exercise a reasonable amount of enterprise and sagacity. I know of no more melancholy sight for an American than the harbor of Alexandria, now the second port of the Mediterranean. Apart from the total disappearance of American steamships and sailing vessels in the foreign trade, which is merely the logical result of our existing navigation laws, it is appalling to see the utter apathy with which our merchants and manufacturers allow European nations to monopolize these rich markets where the closest commercial relations might be established with comparative ease and with considerable profit.

To the recent political tempest there has succeeded a calm which depends for its continuance upon so many conflicting elements that he would be a bold man indeed who should attempt to forecast events; I shall consequently abide by the maxim, "Don't never prophesy unless you know." There certainly exists an intense religious agitation, but not such as is likely to interfere with Nile tourists, as it is confined to the cities and does not extend to Upper Egypt. The thirty-nine royal mummies recently unearthed near Thebes, to which I alluded in a previous letter, and which include the Pharaoh of the Jewish captivity, are alone worth a visit to Egypt.

Correspondence.

THE KING'S MISSIVE AGAIN.

TO THE EDITOR OF THE NATION:

SIR: If yourself and your readers have not already exhausted your interest in the subject, please allow me, as a party concerned, to put in a word as between your editorial comments and those of your correspondent in reference to Mr. Whittier's poem on "The King's Missive." Do you think that your readers would gather from your notice of the papers on the subject, as published in 'Proceedings of the Massachusetts Historical Society,' a just view of the matters discussed in them? The first reference in those 'Proceedings' to the poem and its illustrations—at a meeting at which I was not present—says, the reading of it "led to some discussion as to the historical accuracy of Mr. Whittier's description." It was this point, and this alone, which engaged the interest of the Society, and, afterward, my own. The general subject of the treatment of each other by the Puritans and the Quakers was not under debate, and at three different times in my communications I endeavored to confine the discussion strictly to this point: Does not the poem with its illustrations—of a crowd of Quakers rushing out of jail, and of a group of them holding a jubilation meeting under the Great Elm on Boston Common—unduly strain a poetic license against the facts of history as given on our Court Records?

I argued that measures and effects such as in reality did not follow from it were assigned to the letter of King Charles II., and showed that as soon as the Puritan magistrates, in reply to it, had informed him how they had been molested by the Quakers, he sent them a second letter of quite a different tenor. Those familiar with Massachusetts colonial history need not be told that the grim magistrates of the colony were not wont to pay much deference to foreign interference with their affairs, or to do otherwise than to play off against it some sly evasions and tricks of their own—as, for instance, when they were ordered to send back their charter to the King, and did not do it. Popular revulsion of feeling and dissension among the magistrates themselves had arrested the full severity of the proceedings against the Quakers before the arrival of the King's letter; there had been two jail deliveries, and Quakers under capital condemnation had agreed to go off of their own free will. From the first settlement of the colony, victims of its severe proceedings had gone with their complaints to the English court. The magistrates had become hardened against any risks of this sort, and cared little for them. So far from fearing to send any of their Quaker victims to England, in accordance with the King's demand—though they did not in fact return a single one—they had opened the jail to them before the King's letter was received, on the express condition, as the Court Records show, that they would go to England of their own accord. Whoever knows the temper of the magistrates at that time will smile incredulously at the idea of the released Quakers being allowed to hold a jubilation meeting under the Great Elm.

Many readers get their ideas of history from poetry. On many subjects this makes but little difference. I remember a pleasant discussion which arose some time ago on the question how long it was after the settling of the poor, hard-pressed Pilgrims at Plymouth before they could have a taste of good old English roast-beef and butter. Some one said: "Priscilla Mullins rode on a white bull when she went to be married to John Alden." "What was the date of that marriage?" was asked by another of the group. A

reference to the inexorable records of sober history presented the fact that the marriage took place three years before Governor Bradford makes this entry on his page, under date of March, 1624: "Mr. Winslow came over. He brought three heifers and a bull; the first beginning of any cattle of that kind in the land."

Mr. Longfellow harms no one in this anachronism. He only beguiles us with the pleasant fancy that the Pilgrims might have enjoyed roast-beef at least three years before there was a "horned creetur'" in the country.

GEORGE E. ELLIS.

110 MARLBORO STREET, BOSTON.

THE ARCHÆOLOGICAL INSTITUTE OF AMERICA.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me to protest against the description of the Archæological Institute of America, in several of our newspapers, as the *Boston* Archæological Society? The Institute is in no sense of the word a local society, and its labors, now carried on in Mexico and at Assos, in Asia Minor, have certainly more than a local interest. Its list of members gives the Institute already the right, assumed in its title, to rank as a national organization; and the only ground for confining it to Boston is the fact that its meetings have heretofore been held there.

We are particularly anxious to avoid the imputation of being a society peculiar to Boston or to any other one city; not that we do not recognize entirely the generous interest of Boston in the work of the Institute, but because that work is too extensive to be carried on properly if it must rely upon merely local support.

I am, yours, very respectfully,

THOMAS W. LUDLOW.

No. 244 EAST 13TH STREET, NEW YORK, November 18, 1881.

THE MANUSCRIPTS OF THE NEW TESTAMENT.

TO THE EDITOR OF THE NATION:

SIR: In your article of June 9, upon the new version of the New Testament, you refer to the fact that the oldest MSS. do not date from much less than four centuries after Christ, and you claim that the publishing of this fact "is not calculated to strengthen the popular faith in the authenticity of the book as a revelation." The precise position thus taken cannot be objected to, yet the words suggest the possibility of a serious doubt springing from the nature of the manuscript evidence. In the second volume, just published, of Drs. Westcott and Hort's 'The New Testament in Greek' is given a clear and thorough investigation into what is termed the genealogy of the MSS. As is well known, even the three oldest of these, the Vatican, the Sinaitic, and the Alexandrian, present a very large number of variations from one another, which are mostly of no interest except to one who investigates the origin and mutual relationship of the documents.

It is evident at once that these three MSS. are copies of some one or more older MSS.; and the study of the origin of copyists' variations having been reduced to a science, the relationship of these MSS. is discoverable up to certain limits. It appears from these methods of study, which Drs. Westcott and Hort detail without purposing to establish the much greater antiquity of the original writings—for it probably never occurred to them that that could be seriously doubted—that these three MSS. are related in the same way that the zoölogist finds the well-marked varieties of a species to be related. To conceive that these MSS. proceeded from any common source separated by less than two or three centuries would be as unscientific as to look for a common ancestor of varieties of animals within any similar period. Probably no more definite estimate could be made, but it is clear that the "genealogical" evidence is of such strength as to diminish very greatly, if not remove, a doubt arising from the fact of these MSS. being some centuries later in their origin than the events they record.

GEO. P. HUNTINGTON.

MALDEN, MASS., November 21, 1881.

Notes.

THE *International Review* will hereafter be conducted by Messrs. Robert P. Porter and Henry Gannett, both well known from their relations to the late United States Census. The January number will be the first issued under the new management.——We have received the following reprints:—From Fords, Howard & Hulbert: The Rev. H. W. Beecher's 'Yale Lectures on Preaching' (three volumes in one) and 'Norwood'; and Mrs. Stowe's so-called "Domestic Tales," in one set: 'My Wife and I,' 'We and Our Neighbors,' 'Pink and White Tyranny,' and 'Poganuc People.' From Chas. Scribner's Sons: Dr. J. G. Holland's 'Lessons in Life,' 'Plain Talks on Familiar Subjects,' and 'Kathrina.' From Geo. Routledge & Sons: Professor Hoffman's 'Modern Magic' and 'Parlor Amusements'; 'Sanford and Merton'; and Prof. Plumptre's metrical translations of the tragedies of Sophocles and Æschylus. From T. B. Peterson & Bros.: Francatelli's 'Modern Cook,' 'Helen's Babies,' and 'The Initials' (of which it is high time the plates were sent to the melting-pot, in order, of course, to make way for a handsomer dress). From J. R. Osgood & Co.: Mrs. Shedd's 'Famous Painters and Paintings'; and Fields's 'Yesterdays with Authors,' to which steel portraits have been added of Dickens (two), Hawthorne (two), Pope, Miss Mitford, Wordsworth, Thackeray, Barry Cornwall, and Leigh Hunt. Concerning some of these the text contains particulars, which it would have been well, however, to repeat in a special table of the illustrations. The early Dickens and Hawthorne are curious.——Merely to mention the receipt of vols. xxi. and xxii. of *Scribner's Monthly*, bound, is, after our current account of this magazine, sufficient. Nor is more called for in the case of the substantial second volume of *Harper's Young People*; but we will add, with an eye to all children's periodicals, that we like it better bound than in its weekly issue. In other words, a complete volume is, to our mind, a better gift than a running subscription.——The abridged 'Proceedings' of the session of the American Philological Association at Cleveland last July have been published. The Committee on the Reform of English Spelling furnish a further list of twenty-four classes of words for amendment, adopted from the 'Partial Corrections' of the English Philological Society.——*Nature*'s latest "Science Worthies" portrait is that of the lamented James Clerk Maxwell, given in the number for October 27. The accompanying sketch of his life is brief, owing to the recent occasion for dwelling upon his career at length.——S. W. Green's Son, 74 Beekman Street, has put forth a pamphlet containing much practical information for authors as to estimates of the printed bulk of MSS., the various sizes and weights of paper, the relative capacity of fonts of type, etc.——Mr. John Payne, who published for subscribers his complete rendering into English of the poems of Villon, now proposes to issue in the same way five hundred copies of a complete translation from the original Arabic into English prose and verse of the 'Thousand and One Nights.' Much of the original matter is so "free" that it has hitherto been left in Arabic. The work will consist of nine octavo volumes.——Franz von Werner, born in Vienna in 1836, but a naturalized Turkish subject, died recently at the Hague. He was for several years Turkish envoy at the courts of Sweden and Holland, but is best known as an author, especially of dramatic works, under his Turkish name of Murad Effendi.——A monument was recently erected to "Charles Sealsfield" at Znaim, German Austria, his birth-place.

—The French edition of M. Eugène Muntz's 'Raphael, His Life, Works, and Times,' was reviewed at length in No. 821 of the *Nation*. The work has now been translated into English, and, with the same numerous array of plates, has been published in London by Chapman & Hall; in New York, by A. C. Armstrong & Son. As a holiday book it has the rare merit of being sumptuous in appearance and authoritative in contents. It is a mine of correct information.——Another beautiful book, indirectly illustrating the American predilection for landscape, is Mr. Samuel Adams Drake's 'Heart of the White Mountains,' for which the greater part of the designs were furnished by Mr. W. Hamilton Gibson. Readers of *Harper's Magazine* know something both of the text and of the woodcuts. Large type and broad margins do not relieve a certain thinness and dulness in the former, but the cuts of course gain by the more favorable conditions under which they are now printed. We do not mention necessarily the best drawn or the best engraved of them when we say that the very spirit of the White Mountains is to be found in the views of Lake Winnipiseogee, the Conway Meadows, Mt. Adams and the Great Gulf, Welch Mountain from Mad River, and Mt. Lafayette from Bethlehem. In general, one is struck with the fidelity of the artist's work, as well as with its poetic quality.——A cheapened but still somewhat stylish volume, once honored with an *édition de luxe*, is Mr. L. G. Seguin's 'Picturesque Tour in Picturesque Lands' (A. C. Armstrong & Son). It abounds in woodcuts, large and small, drawn from all sorts of sources, and sometimes arbitrarily misnamed, and ranging through many degrees of fineness or coarseness. The letterpress is in part evidently derived from the editor's personal experience, but in part is, we suspect, a skilful compilation, like the pictures themselves. To attempt to draw the line is hardly worth the while, inasmuch as the leading traits of national life are truthfully drawn.——By any name a new edition of the late John Hill Burton's 'Book-Hunter' would be welcome. The publisher of the one before us (Philadelphia: Robert A. Tripple) calls it both a memorial and a facsimile edition. The former epithet we can understand, but the latter is certainly misleading, or we have scrutinized Philadelphia typography to little purpose. This, however, is a small matter. The book is handy, easy to read, and comely to look at, and is not too dear. An obituary notice of Dr. Burton, borrowed from the *Academy*, is prefixed to the work proper.——The first edition of Mr. Oliver Johnson's 'Garrison and the Anti-Slavery Movement' was published by subscription, but without the typographical pretentiousness commonly observed in books thus offered for sale; in fact, it was printed and bound in very indifferent taste. The work has now been put upon the open market with the imprint of Houghton, Mifflin & Co., and with the elegance characteristic of the products of this firm. In size it has been promoted to an octavo; and the laid paper, the broad margins, and the faultless exterior complete the transformation. Some internal improvements also are to be noted, principally a supplementary chapter, in which,

taking for his text two adverse criticisms of the *Christian Union* and the *Independent*, Mr. Johnson defends and reinforces his account of the shortcomings of the churches, and dwells further on Mr. Garrison's attitude toward the political anti-slavery organizations and on his disunion policy. More than ever, therefore, the book is calculated to maintain its place in the public estimation.

—The opening paper of the December *Harper's*, on "The Bernadottes," by Mrs. Gustafson, is an entertaining account of a ruling family that has had the tact and ability thoroughly to identify itself with its adopted country. How well the Bernadottes deserve their popularity may be seen from Mrs. Gustafson's description of the important social and political reforms instituted by Oscar I. No mention is made of the great and peaceable revolution accomplished under Charles XV., and through his initiative and that of his great Minister, Louis de Geer, by which Sweden passed from the antiquated and cumbersome mode of law-making, by a majority of three out of four houses (Nobles, Clergy, Burgesses, and Peasants), to the modern parliamentary form of legislation by two chambers. This reform involved the voluntary surrender of their ancient privileges by nobles and priests. The enlightened beneficence of the princesses of the house of Bernadotte forms a fitting accompaniment to the statesmanship of their husbands and brothers. The spelling of the Swedish names of persons and places is usually correct. Bernadotte was made heir to the Swedish throne in 1810, not 1815. The historical painter, Höckert, was born in 1826, and it is hardly probable that he witnessed the burning of the Royal Castle in 1697, as stated in a foot-note to the engraving from his painting representing that event. The accompanying portraits of Oscar II. and Charles XV. do but scant justice to two uncommonly fine-looking men. Mr. Hatton's third paper on "Journalistic London" treats sympathetically of some of the Jingo papers and their editors, with especial emphasis on Mr. Edwin Arnold, of the *Telegraph*. In Mr. Arnold's experience Greek and Latin have been of infinite service "in the commonest experience of a cheap press"; and his doctrine that it is impossible for a newspaper man to be too widely read and trained, must be assented to, especially in the modern development of the daily journal as a patron of public charity, domestic employment, geographical exploration, and what not. It was at Mr. Arnold's suggestion that Mr. Lawson, the proprietor of the *Telegraph*, despatched Mr. George Smith on his Assyrian expedition. The portraits of Mr. Mudford, Mr. John Morley, and Mr. Frederick Greenwood will most attract attention. Mr. John Fiske's "How America Came to be Discovered" implies a sequel, and indeed reads like the prelude to a history of the United States. The popular science of this number is found in Mr. W. H. Gibson's "Among Our Foot-Prints," observations with pen and pencil on creeping and low-lying things in field and wood. Among the poetry, a good idea is given of the monologues now fashionable in France, by Mrs. E. W. Latimer's translation of 'The Hat,' recited by M. Coquelin.

—The *Atlantic* for December contains an article on the "Origin of Crime in Society," by Mr. Richard L. Dugdale, in which the writer, who is a penal reformer, argues that imprisonment as a remedy for crime is a failure. He does not make it very clear what he would substitute for prisons, which he admits will always continue to be necessary for the confinement of murderers and of criminals addicted to offences of great violence against the person; but he seems to think that ultimately criminals will be permitted to remain at large under some sort of supervision founded upon the Irish prison system, and that introduced by Captain Maconochie at Norfolk Island. The idea at the bottom of the article is that reform and not punishment ought to be kept in view as the chief end of repressive measures taken by society against criminals. The practical difficulties in the way of this are, however, enormous, and are very well stated by Mr. Dugdale himself, in a passage the full force of which he does not appear to understand:

"We know so little concerning the offending class, as its members ramify through the complex web of society, that new and long-continued observations need to be made, extending to their ancestry, to the surroundings of their childhood and manhood, to their social, mental, moral, physical, and industrial disabilities, before a clear conception can be obtained of the multiform agencies by which a criminal can be lifted into a useful and honorable career."

We may get some faint idea of the amount of labor that would be involved in any general substitution of individual reformatory effort for prisons by reflecting that the work of reform is closely analogous to that of education. The penal reformer takes the adult criminal and subjects him to those moral influences, repressive and stimulating, which cultivate the habit of virtue, just as the parent takes his own children and promotes in them the formation of good character. The difference between the two things is, that the parent goes to work at the earliest stage of his subject's career, and makes the development of the child's character a main business of his own life. In the case of the criminal, a character has been already formed, and what has to be done is not merely to furnish him with a new and good one, but first to get rid of his already established bad habits. In other words, the work is doubly difficult in the latter case. Moreover, the parent has the motive of natural affection and interest to keep him at his work, while the reformer of adult criminals can never have anything more than a general philanthropic desire to benefit society. It is very improbable that there will ever be in the world, at any one time, any very large number of people who will be competent to carry on the work of individual criminal reform, whereas the number of children to be educated is directly governed by the number of parents who bring them into the world. The work of education is even now very imperfect, and does not prevent the continual production of large bodies of adults given over to vice and crime. To imagine that the time will ever come when the criminal can be taken in hand by the reformer as the child now is by its parent, is to imagine a vastly greater interest in the work of reform than natural causes will be likely to produce. Mr. Dugdale's article contains some valuable suggestions and also a good many unintelligible propositions. What the following sentences mean we will not undertake to say, and therefore forbear to express any opinion as to their value:

"These assumptions are jealously maintained, and on analysis they possibly reveal that the fear of criminals is greater than confidence in human nature; that faith in statutes is stronger than faith in social laws, and that reliance upon brute force is more esteemed than a proper understanding of the remorseless compulsions of national metamorphoses. In matters of crime, the public mind largely ignores the part which civilization plays as a perpetual persuasion, in slowly moulding the most diverse and obdurate elements of self-interest into still more diverse and recondite forms, which pass under a thousand altruistic names."

—Mr. Theodore Child contributes a readable article on "Shakespeare and Berlioz," which contains an account of the musician's unfortunate infatuation for Miss Smithson, who after many years of distant worship finally became his wife, and also of his extraordinary prayer to Shakspere, which candid agnostics, who hope to see the *grand être humain* substituted for the Almighty, may read with profit. An article by Edward Farrer on the "Habitant of Lower Canada" has some remarks of interest with regard to the French spoken in that province, which not only puzzles most travellers, but has caused a good deal of discussion and trouble in France itself. Many travellers speak of it as a *patois*, but Mr. Farrer insists, as the Canadians themselves do, that the basis of the language is pure French—French of the classical age—marred, however, by certain Anglicisms, and by the use of archaic words and of local terms, which the habitant has had to coin in his new life.

—American agricultural competition, which has excited so much alarm in England for the past two years, has not left Germany free from apprehension for the future; and although the Germans are not confronted with the possible necessity of a radical social revolution, the problem is sufficiently grave to call for patient investigation. Mr. Henry Semler, a German resident of San Francisco, contributes to this question a volume of more than 200 pages ('Die wahre Bedeutung und die wirklichen Ursachen der nord-Amerikanischen Concurrenz in der Landwirthschaftlichen Production,' Wismar, 1881), intended to serve at once for the instruction and the encouragement of his countrymen. He is evidently a man of good sense, and one who has travelled far and intelligently; he says that for ten years he has worked on American farms in the Eastern and Western States as well as on the Pacific coast, and in every capacity, beginning as a laborer and rising to be a proprietor. Hence he justly lays claim to a better right to be heard than belongs to newspaper correspondents and other travellers, who have only seen the country superficially. The point which he aims to enforce is, that the great advantage which American farmers possess over those of Germany is not a natural one, which it would be hopeless to overcome, but is rather to be sought in the methods and habits of the people, the adoption of which by the Germans would lead to the most beneficial results. The natural fertility of the soil has been, he says, much exaggerated, and is, in great part, neutralized by the cost of transportation. Neither the price of land nor the cost of production is as low as is sometimes taken for granted by foreigners who do not make a proper allowance for the overstatements of American newspapers. How cautiously American statistics must be regarded is shown by the indignation with which the last census returns were received in St. Louis, Chicago, and other cities, which had always insisted that they possessed a much larger population than the figures actually show. As a further instance the author relates how a committee of the New York Butter and Cheese Exchange arrived at an estimate of the total annual butter production of the United States. They assumed that five millions of the population consumed a pound a week, each; ten millions three quarters of a pound, ten millions a half pound, and ten millions a quarter pound. To this they added one third more, as being used for cooking purposes, and fifty-three million pounds exported, and thus got a total of 1,440,000,000 pounds as the annual butter production. This may be good guessing, but it is not statistics. The real superiority of American farmers the author finds in their practical methods, which lead them to use machinery, improved tools, light vehicles, and all sorts of labor-saving and time-saving appliances, and which is observable even in subsidiary matters, such as the dress of the laborers, the number of meals taken in a day, the hours of labor, and the domestic arrangements. Another

important matter is the habit of temperance, in which Mr. Semler maintains that the American country population is far superior to that of Germany. He is most positive in the assertion that alcoholic stimulants are an unmixed injury to any one who has exhaustive physical labor to perform, and that they undermine the power of endurance.

—Other factors which he enumerates are: a superior social position, resulting from a democratic constitution of society; a minute division of labor, so that we have wheat farms, dairy farms, peach farms, strawberry farms, to say nothing of the special devotion of certain sections to cotton, to sugar, to tobacco. The author even speaks of special turkey farms. Further, the great number of railroads, carrying produce with despatch and at low rates, the more perfect organization of commerce, and the enterprising spirit of the mercantile community. On all of these matters the author goes into full details, which show an intimate familiarity with his subject, and which he commends to the emulation of his countrymen. He sees no reason why they should not adopt American ways at home when they show such readiness in doing so here. In speaking of the Chinese in California, with whom he has worked side by side, he denies that it is their poor way of living that makes them formidable competitors. It is true they live in narrow quarters, but in point of food and clothing they need no less than a Caucasian. When working on farms, where they board themselves, they eat three meals a day, consisting of pork and rice, white bread and tea, and on Sundays they have poultry and cake. The secret of their success is to be sought in the principle of coöperation, which they carry to perfection. They all belong to one or other of the six corporations, which own large establishments and are marvellously organized.

—In No. 805 of the *Nation* (December 2, 1880) we reviewed the first volume of Stewart and Long's new translation of 'Plutarch's Lives,' comparing it with Clough's revision of the Dryden translation, and pointing out numerous inaccuracies and other defects in the new version which should prevent it from superseding Clough's in public favor. We have now received the second and the third volume (published by Geo. Bell & Sons, London, 1881), and an examination of these confirms the opinion which we expressed a year ago of the first volume. We find no decided improvement in any respect on the older translation, and the errors and inaccuracies make it an unsafe guide for those who cannot refer to the original. We give a few specimens, taken at random from the life of Nicias. In chapter ii. we find, "yet Nikias never preferred the interest of his party to that of his country," where Plutarch wrote, "nevertheless he had the good will of the common people, and they were ambitious to further his interests." In chapter v. Plutarch says of Nicias, "Nor did he have any leisure at all for such recreations; but when he was General, he used to spend his time until night at the War Office, and when he was Senator, he used to be the last to leave the Senate house, as he was the first to come to it." Stewart gives merely this: "When General, he used to spend the whole day in his tent, and when the Senate met he would be the first to come to the house and the last to leave it." Just below, where Plutarch says of Hiero, who was educated in the house of Nicias, that he professed to be the son of "Dionysius, called *Chalcus*," Stewart calls him "Dionysius of Chalkis," who was a late historian. At the end of chapter xxiii., in the account of the fatal eclipse of the moon, which delayed the retreat of the Athenians from Syracuse in 413 B. C., we read in the new translation, "but Nikias persuaded them to wait for another complete circuit of the moon, because its face could not shine upon them propitiously before that time after its defilement with the gross earthly particles (!) which had intercepted its rays." It is beyond our power to conceive of any process by which all this could be tortured out of the simple statement of Plutarch, "But N. persuaded them to wait through another circuit of the moon; as if he had not seen it become clear again as soon as it had passed through the region of shadow where the light was intercepted by the earth." Earlier in the same chapter, Stewart gives, "Men at that time could not endure natural philosophers, . . . but accused them of degrading the movements of the heavenly bodies by attributing them to necessary physical causes." This is a very inadequate rendering of Plutarch's expression (which might come from a modern sermon), "of frittering away the Deity into irrational causes, and blind forces and movements governed by necessity." This edition will be completed when one more volume (the fourth) is published.

—We read in the last *Academy* that at a meeting of the Browning Society, in London, on October 28, an address was delivered by Mr. Kirkman of a somewhat remarkable nature. Societies like these, for the study of the works of living authors, would seem amenable to the decent feeling which makes us reserve our statues for the dead. No objection can be offered to the reverent discussion of texts, or to any amount of admiration of genius, in such gatherings; but, unless the reporter is excluded, there are some things which had better be left unsaid, in the interest both of speaker and subject. Mr. Kirkman, according to the *Academy*, began by suggesting a rough division of Browning's poems into two classes, earlier and later: "(1) those which may be understood and enjoyed; (2) those which never will be," although their obscurity, "the being 'dark with excess of light,' Mr. Kirkman considered altogether a legitimate difficulty to be dealt with; a difficulty ending in satisfaction and enhanced degrees of pleasure." The first excuse for founding a Browning Society Mr. Kirkman alleged to consist in "the fact that Browning is undoubtedly the profoundest intellect, with the widest range of sympathies, and with the most universal knowledge of men and things, that has arisen since Shakspere; his Shaksperean genius shining in his power to throw his whole intellect and sympathies into the most diverse individualities." There is a "legitimate difficulty" in this last sentence, but the reader will find it to "end in satisfaction and enhanced degrees of pleasure." Mr. Kirkman went on to say that "the three great subjects treated by Browning are (1) music, (2) art, and (3) religion." But this, after all, is only half the truth; for Browning is a born musician, an art critic and exponent of the religious aspect of art, and "not merely a religious poet, he is *religion itself*." Here the cultus reaches a stage at which, as we have said, the doors ought to be closed and locked, and the mysteries conducted in dead secrecy. A modicum of humor in Mr. Browning's nature would make him lay down the *Academy* with disgust.

—Mr. Henry Gannett, the geographer of the Tenth Census, has just published, in the form of an Extra Census Bulletin, a statement of the approximate areas of the United States, the several States and Territories, and their counties. The paper is accompanied by a small map of the United States, showing by lines of color the territory which is included in the area of each State and Territory as given in the tables. Of the necessity which existed for undertaking this work, Mr. Gannett says, in his introductory letter, that, "of several States a number of estimates of area have been in use, differing from one another by thousands of square miles, and none of them, perhaps, traceable to any authentic source. Many of the results were palpably wrong, being so far from the truth that it is a source of surprise that they were not corrected before." The general method employed by Mr. Gannett in obtaining the areas of the United States and the several States and Territories can be briefly described. The square degree—*i.e.*, the spherical quadrilateral included between two consecutive parallels and meridians—was used as the unit of computation, its area in different latitudes being carefully computed. The area of the country, as of each State and Territory, is, of course, equal to the sum of the square degrees included within its limits, increased by the fractional square degrees. Where the latter were less than half the square degree they were measured directly from the best available maps or charts. Where they were more than half, the portion lying outside the State or county was directly measured and deducted from the total of the square degree. As the geographical position of the boundaries and coast of the country is throughout very nearly their whole extent accurately known, through the labors of the Coast Survey, the Lake Survey, and the different boundary surveys, its area is susceptible of tolerably accurate determination, and it is to be presumed that the area as given by Mr. Gannett can be in error but very few square miles. This area is given as 3,025,600 square miles. It includes all interior water area, excepting Lake Michigan, and all bays, gulfs, etc., which are closely landlocked. Deducting from these figures the area of all water surface, bays and estuaries of the sea, lakes and rivers, there results 2,970,000 miles of land surface. These measurements, of course, are exclusive of Alaska, whose area can be merely a matter of the wildest conjecture.

—In regard to the degree of accuracy claimed for the areas of States and Territories Mr. Gannett says: "While most of these areas can be considered as only approximations, yet they are as close approximations as the maps and the determinations of geographical positions, of boundary lines, etc., will permit." The principal source of error in the areas of States is not inaccuracies of measurement, which may be regarded as trifling, but is due to uncertainties regarding the location of the boundary lines. Until these shall have been accurately established, all measurements of certain States are only approximations. The boundaries of many of the States, however, have been accurately located, and in these cases the areas have been closely computed, while several of the Western States and Territories are limited by parallels and meridians, and their exact areas are merely a matter of computation. Mr. Gannett also calls attention to the discrepancies between the positions of many boundary lines as established by law and as actually surveyed and marked upon the ground, noting the fact that, in obtaining areas, he has been perforce obliged to accept the legal position of the boundaries. The areas of the counties have been obtained by direct measurement, and corrected arbitrarily to make them, in adding up, equal to the total area of the State as determined independently.

—The billiard contest at Tammany Hall has been watched with much interest by professionals as well as amateurs on account of its involving a comparatively new development of the game. The chief problem of modern billiards is to make rules which will render continuous "rail" play, or anything like it, impossible. The attempt last year to solve the difficulty by marking off the

corners of the table by a chalk line, and forbidding play within this limit, did not, we believe, produce the desired effect, because the professionals on reaching the line, instead of being forced, as it had been expected they would be, to resort to "open" play, or in other words to separate the balls by "round-the-table" shots, found that they could carry them across the corner from one "rail" or cushion to the next, and continue "nursing" them till the next chalk line was reached, and so on. People who are not possessed with the true billiard enthusiasm may, by the way, get some idea of what "nursing" in the hands of a professional is from the fact that the late Professor Peirce, who made a quasi-mathematical examination of the game, found that many of the close shots require a delicacy of sight and touch which in other departments of human activity the eye and hand cannot attain except with the aid of mechanical contrivances, magnifying glasses, etc. The rules of the "cushion carom" game do away with the chalk-line, but require the player, in order to count, to touch with the cue ball not only the object and the third ball, but a cushion as well. The cushion may be taken before striking either ball or between the two. In the first play under the new rules the average runs were very small, and it seemed as if the long-desired result had at last been secured. In fact, it seemed to have been secured almost too well. For a professional it was found that an average of three or four was very good work, while for an ordinary player to make a single run of three in the course of a game would be creditable, and his average would probably be represented by a decimal fraction. As a very large proportion of the shots have to be "bank" shots, or shots in which the cushion is taken first, the difficulty of calculating in what position the balls will be left for the next play is enormously increased. Still, even at this game very high scores may eventually be attained, for in one contest Dion made the extraordinary run of forty-five, beating the best previous record by ten points. The game as now played is for 200 points, and some experts are said to believe that practice will before long enable the really great professionals to make the entire game in a single run. If that point is reached, the reformers will have to be called in again.

—Beethoven's Eroica Symphony, although perhaps more familiar to the public than any other symphonic work, yet requires for a full appreciation of all its exquisite details a fresh and receptive state of mind, and Mr. Thomas therefore showed his usual taste and practical sense in placing it at the head of the programme of the first Philharmonic concert in Brooklyn. To say anything in praise of this symphony at the present day would be quite as superfluous as to say that Mr. Thomas's orchestra played it as well as it can be played by any association of mortals. But even the Eroica Symphony has its weak spots, and conspicuous among these are the concluding bars of the last movement. How the same pen that wrote the sublime bars with which the symphony is replete could write such a mechanical ending, in the slovenly style of Rossini, is quite a mystery; and there is no denying that, as in the case of the last bars of the Fifth Symphony and of the opera of "Fidelio," such a trivial ending detracts considerably from the beauty of the work. Beethoven and some other German composers did not always remember that all's well that ends well; and their awkward way of ending their finest works often reminds one of those bashful men who do not seize the one proper moment of bringing a social call to an end, immediately after having said something bright, but linger a moment longer to add a platitude. The second orchestral selection was Brahms's Academic Festival Overture, concerning which nothing need be added to what has been already said in these columns. We had the pleasure of being present at the Philharmonic concert in Vienna at which this overture was first performed under the bâton of Hans Richter, and in presence of the composer, who had presumably superintended the last rehearsal; and we feel bound to testify that Mr. Thomas's performance of it was fully equal to Hans Richter's; or, in other words, that the New York Philharmonic is not in any respect inferior to that of Vienna. Signor Campanini had been engaged to sing two songs, "Il mio Tesoro" from "Don Giovanni," and a romance from Weber's best but least popular opera "Euryanthe." Unfortunately his voice gave evidence of fatigue, and these selections were not so well sung as at the rehearsal on Friday afternoon. An occasional lack of tone-color, and necessity of forcing a high note, should warn him that he must use his voice very carefully if he wishes to preserve its former beauty. Nor will he add to his popularity among competent judges by taking liberties with such German songs as he is asked to sing. After Nicolini, of course, Campanini seems a model of perfection, especially in Italian music. But to assert that he is prëeminent in German, and especially modern German music, as some of his friends do, is a notion which cannot be seriously considered by those who have heard Vogel, Winkelmann, or Niemann. Madame Schiller was the second soloist, and played Liszt's arrangement for piano and orchestra of Schubert's Fantasia op. 15. This is one of the most successful of Liszt's numerous transcriptions, and it can be said of it as of Berlioz's orchestral arrangement of Weber's "Invitation à la Valse," and Mr. Thomas's version of Schubert's "Der Doppelgänger," that it is more effective in its new than in its original form. Madame Schiller's execution of it was on the whole good. She played the "Wanderer," which is introduced in the course of the piece, with much expression, and her runs in the high octaves were light and graceful. Passages that require great energy were less satisfactorily rendered, and the noise made by her striking the keys with her finger-nails was occasionally quite annoying. The ballet music to Rubinstein's "Nero" followed as the last piece. The introduction of ballet music in concerts is a new fashion which can but be approved of, especially when the selections are made from Rubinstein's operas or Delibes's ballets. Rubinstein has been so successful in this direction that the recent announcement that he was engaged on a ballet could surprise no one. In the ballet music to "Nero" there is just that succession of animated and varied rhythms, with voluptuous melodies usually played by the full force of 'cellos or violas, that is called for by the situation. There are at least three or four motives in this ballet music which are the product of pure genius, and which give it a special claim to be heard in a concert-hall, where the attention is not distracted by the gorgeous spectacle offered to the eyes in a theatre.

—For the performances of "Parsifal" in Bayreuth next summer, a special instrument, a sort of bell-piano, has been invented, which is to be used to imitate the ringing of the bells at the entrance of the knights in the Gralsburg. The instrument has only four keys, each being about three times as broad as a piano key. They will be struck with the fist in order to secure the requisite loudness. The strings are also four in number, and suspended over a sounding board. Each string consists of six of the strongest bass strings twisted together. As some old fogies will probably turn up their noses at the "necessity of inventing new instruments for effect," we will add for their benefit that real bells are not available in an orchestra on account of their discordant overtones, whereas such an instrument as we have described will represent a set of chimes in perfect tune and of excellent clang tint. Here, by the way, we may allude to two recently invented methods of applying electricity to music. One relates to the photophone or radiophone, which can be attached to a so-called dumb piano (used for exercises) in such a way that the player can hear his performances, but no one else. The other is Boudet's electric piano, which differs from ordinary instruments in having two sets of hammers. A key of the upper manual is set in motion by electricity whenever the corresponding lower key is touched, and as long as the latter is kept down continues to strike the string rapidly, the result being a beautiful sustained tone like that of an organ, in place of the sharp and dry tone peculiar to the piano.

— Amateur astronomers will be gratified to find that the appointment of Mr. Christie to the arduous and responsible post of Astronomer Royal does not necessitate his relinquishing the editorship of the *Observatory*, a monthly review of astronomy which had its inception with him, and which, under his able management, has grown to be a fixture, so to say, of the science. The November issue appears with its accustomed promptness, containing, among other papers, a summary of recent changes on the surface of Jupiter, by Mr. Russell, the Government astronomer at Sydney, New South Wales. The paper deals particularly with the great red spot which for three or four years past has been the subject of much observation by astronomers everywhere, and presents very strong evidence that it is a permanent feature of the planet. That it seems to change a little in form Mr. Russell considers no proof to the contrary, as the Jovian clouds must have considerable influence upon visible outline, and the apparent changes in form are really not great. The color of the great spot may be said to be uniform and constant, though at times small variations of tint on parts of it have been detected. The shadow of a satellite in crossing the spot is black; if it were self-luminous this would not be the case. And Mr. Russell's paper, chiefly relating to his own observations, goes a long way toward proving that the "spot" is solid ground, and not, as it has heretofore been almost universally regarded, merely clouds. The November *Observatory* contains also a print of the Report of the Committee on Standards of Stellar Magnitude — a subject which, as every one knows, has hitherto been in a somewhat confused and unscientific state, but which now, through the admirable scheme of the American committee, proposing the coöperation of the astronomers of England and Germany, gives early promise of something very definite and satisfactory. Mr. Christie has associated with him, in the editorship of the *Observatory*, Mr. Maunder, of the Royal Observatory, well known for his spectroscopic observations at Greenwich.

THE GROWTH OF A LITERARY PUBLIC.

Le Public et les Hommes de Lettres en Angleterre au dix-huitième siècle. Par Alexander Beljame. Paris: Hachette. 1881.

THE period which M. Beljame has selected, though neither as splendid as the age before nor as that which followed, and indeed in some of its aspects more repulsive than any in all English literature, has yet for the student certain attractions which are all its own. It is a period of the most violent revulsions and reactions in all our literary history; nowhere do we find such breaches of continuity. Milton was

nearer to the pseudo-Cædmon in thought and character of expression than Wycherley was to Milton; the Victorian poets are nearer Chaucer than any writer of Queen Anne. The whole period resembles a "fault" in geology, where part of a stratum has been violently dislocated, while the natural course of the rock is followed a little further on. Happily for the student, the materials are so abundant and so clear that the lives of the writers and the course of events around them can be studied almost from day to day; and of these materials M. Beljame has availed himself with a conscientiousness and an unwearied diligence that are worthy of high praise. The reader, indeed, is almost oppressed by the multitude of references and citations (accurate even to errors in spelling and slips of the press), to say nothing of the copious bibliography appended to the book.

The violent reaction against Puritan austerity, and the dissoluteness of morals that followed the Restoration, are well sketched by our author, but are too well known from the pages of Macaulay to need more than a reference. As a matter of course the theatres, so long the passionate delight of the public, and whose closure had been one of the chief causes of discontent under the Commonwealth, were soon in full activity. But it was a new theatre and a new public. Strangely enough, the dramatic imagination and dramatic feeling so extraordinary in the preceding age had altogether fled, and has never since returned. In the new theatre all is artificial and dead. No vividly-painted scenes nor ingenious machinery can supply the place of the lost imagination. The Elizabethans dramatized Italian novels, but their successors hash up French plays. For tragic passion we have cold-blooded bombast, even more repulsive by its frigidity than its extravagance, of which poor Nat Lee's mad rants, which have at least a kind of Bedlam sincerity about them, are by no means the worst specimens. For comic wit and fancy we have coarse licentiousness; not the frank sensuality of an age full of joyous vitality, but cold obscenity, so foul, so diseased, that it seems inconceivable that men could ever have borne to write, to listen to, or to see such things. And we may say in passing that we think M. Beljame might have considered his point proved with fewer citations, and might have spared us some of those evidences of *dévergondage* which later editors wisely omit. The public too had changed. The Elizabethans wrote not merely for the Sidneys, Cecils, Raleighs, but for the innocent homely people; the dramatists of the Restoration wrote for a venal king and a corrupt crew of Sedleys, Wilmots, Clevelands, Portsmouths—a public lost to virtue, honor, and even decency. The citizens are never mentioned but with scorn and insult. For such a public the dramatists had to write; before these they had to abase themselves, for only by their favor could they obtain a hearing, and only by their bounty could they live.

M. Beljame certainly does not lay too heavy a charge against this period when he writes:

"This epoch, in appearance so literary, was in reality one of those least favorable to letters. It broke away from Shakspere, and ignored the two noble epics of Milton and of Bunyan. And there are other literary crimes—the word is no exaggeration—to be laid at its door. It condemned Dryden, one of the strongest and most fertile talents that England ever produced, to waste his best years of intellectual vigor in the hasty production of works for which he knew he was not fitted; it compelled the great dramatic talent of Otway to squander itself on work altogether unworthy of him; of Shadwell, who had a native gift of observation and genuine comic *verve*, it made, despite himself, a writer of mere farces."

Why, then, did men of genius submit to all this? Because there was no help for it. It was that or silence. "They were caught in the wheels of the machinery and dragged along in spite of themselves."

"Before writing they carefully took note of what was the taste in high quarters, and submissively followed in its wake, though they saw plainly enough whither it was leading them. . . . They saw the current that was sweeping them along; they cried out against it, but not a single one tried to stem the stream. Not but what there were those who had strength enough for such an attempt; but to make the venture, to brave the fashion in the face of those accustomed to make the law, and banded in a compact body, would have been playing a desperate game. If they failed, they must cease to write; no alternative would have been possible."

Another study, "John Dryden et la Politique," shows us the poet and his literary brethren under another aspect. In the latter part of the reign of Charles, when all hope of a direct heir had been abandoned, and it was evident that the crown would devolve upon James, the political and religious spirit of the nation was stirred to its depths; and the court could no longer be indifferent to popular feeling. After such convulsions as those of the Popish Plot, the Londoners and the country gentlemen had ceased to be mere butts for courtly derision; they were possible squares of pikemen and squadrons of carbineers. The public had become a factor that could never again be left out of the account. But this public was not Oliver's Ironsides, with a fixed purpose and a duty plain before them; it was anxious, suspicious, uncertain, swaying from side to side, capable of sudden furies, split into parties. Both sides were eager to make converts, and a literary strife broke out, Whigs and Tories alike bringing into the field a swarm of political writers. There being as yet no newspapers to offer an arena for free debate, and the press being still shackled, with the unscrupulous L'Estrange as the licenser, the polemic first found utterance in the theatre in the prologues and epilogues, and then in the pieces themselves. Dryden took a share—on the Tory side, of course—and produced his tragedy of "Amboyna" to win over the public to the anti-Dutch policy of the Ministry, and his opera of "Alban and Albanius," in glorification of Charles and James. But the theatre was neither a sufficient nor a satisfactory medium, and the general want was supplied by the coffee-houses, which now came into importance, became centres of common interests, and began to crystallize public opinion.

In these not only was news exchanged, and the events of the day discussed, but satires, lampoons, serious dissertations were read aloud, copies passed from hand to hand, and telling phrases from mouth to mouth. The Government grew uneasy, and attempted to suppress the coffee-houses, but encountered such violent resistance that the attempt was abandoned. The court party became aware that though they could fetter the press they could not gag the growing freedom of speech; and that if the Whigs were to be fought with any hope of success, it must be with their own weapons. They naturally turned to Dryden as their champion. For once the veteran poet found himself in a position to put forth his real power. "Sans modèles, sans prédécesseurs, il créa de toutes pièces le poème politique, et débuta d'emblée par un chef-d'œuvre." This masterpiece was the immortal "Absalom and Achitophel." It was read from end to end of the kingdom—in the country as well as the town. "The father of Dr. Johnson, at that time a bookseller in Lichfield, told his son that he had never known anything to have such a sale, unless it was the 'Trial of Dr. Sacheverell' long after." Numerous antagonists undertook to answer, but it was plain that none could measure swords with the master. The value of such a writer's services was indisputable, and the court hastened to appeal again to him when, on Shaftesbury's acquittal of the charge of treason, a medal was struck in his honor by the exulting Whigs. Dryden published "The Medal." Shaftesbury soon after fled to Holland, where he died, and the discovery of the Rye-house Plot left Charles master of the situation. Conscious of his power, Dryden next drew the pen for a personal vengeance, and did tardy execution on the unlucky Shadwell, who, with all his faults, deserved a better fate than to be known to posterity only by "McFlecknoe."

Whether Dryden was sincere in embracing the Catholic faith is a point still debated. With an inferior man there would be little question, but, with all Dryden's faults, there is such a stamp of manliness and sincerity about him that we are reluctant to class him with the herd of time-servers and turncoats. On the one side it is shown that in so doing he took the best possible mode of recommending himself to the new king, who paid him a considerable sum of money as an earnest of his favor; and certainly, whether the conversion was genuine or not, it was most suspiciously well-timed. On the other hand, it is argued that the payment was but a small part of his long arrears of pension; and it is asked whether the noble lines in the "Hind and Panther" can be other than the expression of fervent conviction. On the whole, M. Beljame's conclusion seems reasonable. Dryden had deep moral, but shallow religious, convictions—or perhaps it is better to say that his religious convictions were strong, but they were moral rather than doctrinal.

"Had he shown," M. Beljame asks with some force, "that he was of other stuff than his contemporaries? Had he in any way distinguished himself by the energy of his character? Far from it. He had shown no firmer convictions in politics than in religion. He made his début as a republican by chanting the praises of Cromwell; two years later we find him a royalist, hailing with enthusiasm the restoration of Charles II. In 1673 he wrote 'Amboyna,' to bring the Dutch war into favor; then, in his 'Absalom' and in the 'Medal,' he violently denounced Shaftesbury for having helped to bring that war about. Even in literary matters we have seen him yielding, despite his judgment and conscience, to fashion and the caste of the day. . . . Poet-laureate though he was, he was none the less a poet—that is, a small and insignificant member of society, incapable of standing alone, and forced to submit to circumstances."

The Revolution of 1688 found a changed England. The sovereign no longer reigned by hereditary and divine right, but by the confidence of the nation. Public sentiment was now all-powerful, and those who could sway it were in high account with the Ministry, if not with the King. Writers were now not merely respected, they were honored and caressed by the great, and fortune and rank might be their reward. "Men of letters," says our author, "grew in their own estimation, had a higher opinion of their profession and of themselves, and, as a natural consequence, began to justify this consideration." The theatre was slow to reform, but there was an improvement in language if not in morals. Coarse indecency gave way to innuendo and allusion, and things were now hinted that would have been spoken boldly out. In 1698 appeared Collier's 'View of the Immorality of the Stage,' to be followed year after year by reiterated attacks and denunciations like the strokes of a pile-driver—heavy, monotonous, fanatical, often unjust, but the expression of sincere conviction. His opponents fought hard, but it was a losing battle. Public sentiment was on his side, and the movement once started threatened to go too far. What was

needed was to show that morality and austerity were not synonymous; that virtue might put on a gracious and attractive garb without being vice in disguise; that a man might lead a blameless life, be a sincere Christian, and at the same time a polished and perfect gentleman. This was the task undertaken by that group of graceful writers of whom Addison was the head.

By this time, and by such circumstances as have been indicated—this is M. Beljame's principal thesis—a genuine public, as we now understand the word, was in process of formation; not a party or clique, but a body of intelligent readers of various ranks of life, scattered throughout the kingdom, capable of being influenced, and in their turn capable of influencing public opinion. This was the public to whom literary men were henceforth to address themselves; and the organ chosen to reach them was the journal, now an established "institution." With Addison's career, his association with Steele, the foundation of the *Spectator*, its character and influence, our readers are already familiar, and we need not dwell upon them. These periodicals completed the work already begun, and the result, in our author's words, was this: "From this time forth the writers have a public before them—that is, a body of readers sufficiently numerous to be relied upon, and sufficiently informed to ensure a reception to any class of literary composition."

The writers did not yet stand upon a purely literary footing; they were not disconnected from parties, and they still looked to men in public office for their rewards. "True, there was no coarse bargain, and the writers were not in the pay of the statesmen; but the statesmen attached them to themselves by associating their interests with their own fortunes. It was a sort of mutual insurance. 'Defend us, and we will assure your existence.' 'Secure us a maintenance,' said the others, 'and we will support you.' . . . They were no longer mercenaries, but allies." And in another place: "It was not literature itself that was regarded, but the services it was capable of rendering. The consideration shown it was not due to its intrinsic merit, but its incidental utility." There remained to be exhibited a man of letters achieving a proud independence, and rising to eminence by his literary gifts alone; and he is brought before us in the sketch of Pope.

M. Beljame does not undertake to make a study of Pope's character, but simply to show that with him the literary profession attained complete emancipation. The deserving author had now a recognized and honored place in society, due to his literary merit alone; there was a large and intelligent public from whom he was sure of a hearing; and there was an established medium between the author and the public—the publisher-capitalist. Of course the melancholy chapter of the calamities of authors was not closed, nor is it closed to this day; but though they might suffer want and neglect, they need never henceforth suffer shame and humiliation. We have to thank M. Beljame for bringing out these facts with force and clearness; and we have preferred giving our readers a bird's-eye glance of the field he has so carefully gone over, to stopping to question or argue points which, after all, affect neither the interest of the book nor the justness of his views.

DICKENS'S LETTERS.

The Letters of Charles Dickens. Edited by his Sister-in-law and his Eldest Daughter. Vol. iii., 1836 to 1870. New York: Charles Scribner's Sons. 1881.

THE third volume of 'Dickens's Correspondence' does not contain many letters of any great interest, though its contents cover a period of some thirty-five years. Many of those printed in it have appeared already in other collections. Others are mere notes, of no permanent value, and several relate to matters connected with his editorial duties, which are unintelligible without having before us the communications of the correspondents to which they are replies. Here and there in the older letters we come upon entertaining passages, full of the author's early humor, which toward the end of his life, as he became more and more absorbed in affairs, and as the work of composition became more and more a matter of routine, seems to have gradually evaporated—or rather, to speak more accurately, to have become hardened into a kind of humoristic formalism, which recalls the living humor of his earlier books and letters much as a fossil preserves the record of animal life. Others contain characteristic passages full of that friendly, familiar fun which, hardly perhaps rising to a literary level, made Dickens always in private life so delightful to his friends and companions. His overflowing animal spirits probably rendered the egotism which pervades them all seem less apparent to the people to whom they were addressed than it seems when printed in cold type.

In a letter dated November 20, 1844, we find the following amusing passage with reference to a travelling purse given him by Count D'Orsay:

"Pray say to Count D'Orsay everything that is cordial and loving from me. The travelling purse he gave me has been of immense service. It has been constantly opened. All Italy seems to yearn to put its hand in it. I think of hanging it, when I come back to England, on a nail as a trophy, and of gashing the brim like the blade of an old sword, and saying to my son and heir, as they do upon the stage: 'You see this notch, boy? Five hundred francs were laid low on that day, for post-horses. Where this gap is, a waiter charged your father treble the correct amount—and got it. This end, worn into teeth like the rasped edge of an old file, is sacred to the custom-houses, boy, the passports, and the shabby soldiers at town-gates, who put an open hand and a dirty coat-cuff into the coach windows of all 'Forestieri!' Take it, boy. Thy father has nothing else to give!"

A letter to his wife from Naples gives an entertaining anecdote of a Neapolitan bathing attendant:

"As soon as we got our luggage from the custom-house, we packed complete changes in a bag, set off in a carriage for some warm baths, and had a most refreshing cleansing after our long journey. There was an odd Neapolitan attendant—a steady old man—who, bringing the linen into my bath, proposed to 'soap me.' Upon which I called out to the other two that I intended to have everything done to me that could be done, and gave him directions accordingly. I was frothed all over with Naples soap, rubbed all down, scrubbed with a brush, had my nails cut, and all manner of extraordinary operations performed. He was as much disappointed (apparently) as surprised not to find me dirty, and kept on ejaculating under his breath, 'Oh, Heaven! how clean this Englishman is!'"

The dearth of matter in the volume can best be judged by the fact that the above passages are very nearly the only quotable things in it.

On Dickens's characteristics as a man and a writer these letters throw very little new light. His egotism, his sentimentalism, his superstition, his passion for the theatre and everything connected with it—all these are prominent throughout, as they were already sufficiently so in the previous volumes. Of his sentimental method of dealing with social problems a good illustration may be found in the letter to Macvey Napier, written in 1845, sketching an outline of a proposed article advocating the abolition of capital punishment. The argument is as follows: Society has arrived at the conclusion that the worst criminals should not be tortured, but if put to death at all, should be killed in the speediest way. To this conclusion the criminal in a case of cruel and deliberate murder has no reason or right to object, but it is still open to question whether it is for the interest of society that the punishment of death should be continued. Now, at the time this letter was written, punishment of death was inflicted by public hanging, and Dickens immediately proceeds to confound the publicity of the execution with the punishment itself. He observes, he says, that all the details of the punishment (meaning here public hanging) are "very repulsive and odious," and he adds, what was undoubtedly perfectly true at the time, that punishment inflicted in that way possessed a horrible fascination for many persons who rendered themselves liable to it, feeding their diseased fondness for notoriety. Everything, he says, too, connected with punishment has a strange attraction not only for the criminal class, but for tens of thousands of decent, virtuous, well-conducted people who find themselves "unable to resist the published portraits, letters, anecdotes, smilings, snuff-takings of the bloodiest and most unnatural scoundrel with the gallows before him." He then goes on to note that this strange interest does not prevail in anything like the same degree where death is not the penalty. By this process of reasoning he reaches the conclusion that it is the infliction of death which produces all these bad consequences to society, and that the dread and mystery surrounding death "in any shape, but especially in this avenging form," are to be regarded as the cause of them. In other words, the death penalty produces crime in the criminally-disposed, and creates morbid sympathy among the well-conducted and moral.

"Furthermore, we know that all exhibitions of agony and death have a tendency to brutalize and harden the feelings of men, and have always been the most rife among the fiercest people. Again, it is a great question whether ignorant and dissolute persons (ever the great body of spectators, as few others will attend), seeing that murder done, and not having seen the other, will not, almost of necessity, sympathize with the man who dies before them, especially as he is shown, a martyr to their fancy, tied and bound, alone among scores, with every kind of odds against him."

This chain of reasoning leads Dickens to the conclusion that it would be for the benefit of society to substitute for the death penalty "a mean and shameful punishment, degrading the deed and the committer of the deed, and leaving the general compassion to expend itself upon the only theme at present quite forgotten in the history, that is to say, the murdered person." The abolition of public executions, however, has swept away most of the abuses to which the old system gave rise, and the curious part of the argument is that Dickens fails throughout to notice or meet a single one of the reasons by which the advocates of the death penalty support their side of the case, his mind being entirely directed not to the penalty or the deterrent effects of the punishment in repressing crime, but to the psychological effect of the punishment upon the person or collection of persons who inflict it. This effect has, of course, in any scheme of criminal law, to be considered, but if it alone were attended to, criminal legislation would certainly take a very curious and eccentric course.

The reputation of Dickens is now suffering from the same cause that has had an injurious effect upon that of so many of his contemporaries—the revelation by his relatives of all the weaknesses of a character which but for such publications as these would have remained to the world at large a mystery. With the expediency of such publications, however, the public has little or nothing to do. If the friends of a great man think it worth while to take the rest of the

world into his confidence, the invitation will always be gladly accepted, while the result will generally be disappointing. We ought, of course, by this time to know enough about literary men to know that our pleasantest acquaintance with them is through their writing and not their lives. The moral qualities which are generally associated with the literary faculty and temperament are not those which of themselves tend to produce happiness in the possessor, or satisfaction and contentment among those with whom he sustains the ordinary relations of life. Unhappiness is in too many cases the price paid for imagination. In a letter to Mrs. Maria Winter, an old friend, written in 1855, Dickens himself makes a rather pathetic confession of the inherent incompatibility which he himself felt between the ordinary duties of life and his devotion to his genius:

"A necessity is upon me now, as at most times, of wandering about in my old wild way, to think. I could no more resist this on Sunday or yesterday than a man can dispense with food, or a horse can help himself from being driven. I hold my inventive capacity on the stern condition that it must master my whole life, often have complete possession of me, make its own demands upon me, and sometimes, for months together, put everything else away from me. . . . These are the penalties paid for writing books. Whoever is devoted to an art must be content to deliver himself wholly up to it, and to find his recompense in it. I am grieved if you suspect me of not wanting to see you, but I can't help it; I must go my way whether or no."

Mrs. Winter was probably never fully satisfied with this explanation of the matter, and Mrs. Winter may here stand for society at large. The really fine thing about Dickens's character—a thing which makes it so very different from and superior to that of the ordinary literary apologist for the "defects of his qualities"—is that his life appears to have been a long and in the main successful struggle to overcome them. It is the fashion of literary men of small mental calibre to mistake the vices of the literary temperament for the causes of it, and even to pander to them in consequence, but Dickens had no illusions on this subject. His life was a long struggle to make a brilliant imagination and humor the servant instead of the master of his character. He did to a great extent make them so, and if in the process his genius lost some of its original power and his humor degenerated into a manner, those who have wept and laughed over his books must feel their regret diminish in their admiration of the remarkable moral qualities which the struggle itself displays. In the end, of course, his memory will be preserved by the products of his imagination, while the temporary curiosity and disappointment caused by the publication of this correspondence will fade away with other gossip of the day.

CHILDREN'S BOOKS.—II.

To present in new shapes the old and familiar tales of infancy and youth is the perpetual endeavor of publishers, and this season we have a conspicuous instance of it in 'The Children's Book' (Boston: Houghton, Mifflin & Co.). Mr. Scudder may be said, in his selections, to have sought to "sweep the decks," for he begins with Æsop, and carries his juvenile readers through fairy tales, folk-lore, Hans Christian Andersen, the Arabian Nights, the moral tales of Goldsmith, Aikin, Edgeworth, and Opie; through Gulliver, Munchausen, and classical mythology; to say nothing of the poetry—hymns, ballads, romances, etc. This thick quarto is of course not exhaustive of the sources drawn upon, but it touches nearly every age and variety of taste. The editing of the poetical portion is least to our mind, and was really worth a book by itself. The illustrations are heterogeneous and not new.

Messrs. Swinton and Cathcart's pretty 'Golden Book of Tales' (New York: Ivison, Blakeman & Co.) contains much that is to be found in the book just described, even to Cruikshank's occasional illustrations. But it borrows also from the Hindu, from 'Alice in Wonderland,' and from Miss Mary De Morgan, and its poetry is mostly humorous. The double editorship leaves one in doubt as to the literary standard controlling the selections, but the ethical standard is curiously shown in the Semitic improvement of Mr. Scudder's "Jew in the Bush" into "The Turk and the Fiddle." The story is one that we should have ruled out from such a collection; and it seems a desperate and unfeeling expedient to hang a Turk in place of the Jew, simply in order to retain the rubbish.

One may mark a parallel case of conscience in the sequel of 'Little Red Riding-Hood,' as given in the tasteful little edition brought out by T. Nelson & Sons. Mr. Scudder frankly relates the repulsive truth—"And, saying these words, this wicked wolf fell upon poor Little Red Riding-Hood, and ate her all up"—certainly one of the most unmoral morals ever invented for the nursery. Here is the counterfeit but humane version: "—and would have eaten her up, but just at that minute the door flew open and a great dog tore him down," etc. It were much better once for all to say good-by to this story. A companion volume, issued by the same publishers, is 'Puss in Boots.' Both have the text printed in brown ink, with graceful vignettes and several delicately colored plates.

There is no difficulty in understanding the attempt to abridge 'Robinson Crusoe,' and the task itself is not the hardest in the world. Considerable liberties were taken with the original by the late Mrs. Farrar, wife of Prof. John Farrar, of Harvard College, who regarded it as rather a doubtful work to set before children; whereas, by pruning, it might be made to serve a moral purpose. Her paraphrase, long out of print, is now republished and condensed in turn by Mr. William T. Adams (Boston: Lee & Shepard). In spite of his care to simplify the style of Mrs. Farrar, which was eminently correct, but based on models now in disrepute, it will be found hard reading for children under ten or twelve. The book, however, is very comely.

Mr. Sidney Lanier's delightful series of boys' books comes to an end with 'The Boy's Mabinogion' (Scribner), a companion volume to his 'Froissart' and 'King Arthur.' These weird Welsh tales open to the young reader a new and strange mine of legend; "though not so rich as the 'Arabian Nights,' they are more vigorous, and their fascination is of a more manful character." Their distinctive peculiarity is, as is shown in the introduction, an extravagance and grotesqueness, and "a greater sense of foreignness, of a wholly different cultus, than even Chinese or other antipodal tales." The illustrations are well designed and engraved, and the fine poetic feeling and thoughtful scholarship of the introduction deepen our regret at the recent death of the editor.

There is but one Kate Greenaway, and her latest production, 'Mother Goose' (Geo. Routledge & Sons), is her best. Hundreds of designers before her have shown us Jack and Gill, Georgie Porgie, Little Bo-peep, the old woman who lived under a hill, but here they are in fresh aspects, charmingly conceived; and of all the rest of the series none can be called a commonplace design. Then such pretty landscapes, as in "As I was going up Pippin Hill," or "Hark, hark, the dogs bark," or "A diller, a dollar"; and such nice interiors as in "Cross-Patch, lift the latch," or "Polly, put the kettle on," and so much refinement withal, with color-sense and sense of form. We repeat, there is but one Kate Greenaway.

Of imitators, however, there is a host. There is some cleverness in both the rhymes and the crudely-colored prints of 'Cat's Cradle' (Worthington), but the tone of the former is at times singularly vulgar. And if we tear out the page whose first stanza is—

> "While I am but a little chap,
> And scarcely out of Mother's lap,
> Comes every now and then a slap,
> With 'mustn't,'"

we must also get rid of the unfeeling and senseless verses (pictorialized!) on Grandaddy Gruff—

> "They laid his old bones
> Out there on the stones,
> And drenched him with water, in spite of his groans."

The book is irredeemable. Better in every respect is Ida Waugh's 'Holly Berries' (E. P. Dutton & Co.), in which, however, there is rather too much baby talk in the poetry, and only a few pictures, like "Come and Kiss Me," "Fishing," and "A Bite," can be praised for the draughtsmanship as well as for the sentiment. The coloring is not remarkable. Miss Plympton's 'The Glad Year Round' (Osgood) is feeble in design, and unrelieved by any brightness in the text. Virginia Gerson, now and again, in her 'Little Dignity' (Routledge), narrowly escapes making a good drawing, but there is much the same unregulated execution in the generality of her pictures that greets us in the opening lines—

> "This is a jolly little Japanese ginger-jar,
> And six peacock feathers; see how pretty they are!"

The title of the book has no significance whatever. 'The May Blossom; or, The Princess and Her People' (A. C. Armstrong & Son) is an English production of the loyal kind, and will not be very intelligible to American readers. One of the subdivisions is "Courting People," and of this variety there is a sufficient supply. The designs are by a practised hand, and several of them possess considerable merit; add an endless choice of colored borders.

There is humor and originality in Lizzie Lawson's 'Old Proverbs with New Pictures' (Cassell). Some of the latter, as "'Tis a poor heart that never rejoices," "The more haste the less speed," are gracefully imagined, and there is a jolly little vignette to "You may lead a horse to water." The verses do not greatly reinforce the moral, and are not well adapted for childish minds. There is no hint that 'The Decorative Sisters,' "a modern ballad, by Josephine Pollard, with illustrations by Walter Satterlee" (A. D. F. Randolph & Co.), would be out of place among the books already considered, but we are incredulous that a caricature of the "æsthetic craze" will be anything but lost upon children. Both partners in this enterprise, for whatever age it is intended, fall short in extravagance: they have not succeeded in provoking merriment. This cannot be said of Mr. Hopkins's burlesque illustrations in color of Mrs. E. T. Corbett's well-known nonsense verses, 'Three Wise Old Couples' (Cassell). The fun is not refined, but it is there.

Mr. Champlin's 'Young Folks' History of the War for the Union' (Holt) is a book that can be heartily recommended, as designed to meet a real want, and meeting it well. Indeed, the book gives a good deal more than it promises, for it is equally well adapted to general readers who are not "young folks." It is, in short, a well-written and entertaining history of the War of the Rebellion, very fair and impartial in tone, and aiming rather at incident and graphic narrative than at political and strategic analysis, although these are not neglected; affording, therefore, probably as good an account of these events as most will desire. It is copiously

illustrated, as well with maps and plans as with portraits, views, and pictures of special objects of interest (as the Armstrong gun and the barrel torpedo). Few or none of the illustrations are "made-up" pictures. There is an index.

'Toby Tyler' (Harpers) is a far better book than one would suppose from its gaudy and unpleasant cover. It is a natural narrative of the misadventures which befell a country lad who ran away with a circus, and is likely to act as a deterrent on other lads who are wont to think that the canvas walls enclose an earthly paradise. The "living curiosities," from Mr. Stubbs, the monkey, to Mrs. Treat, the fat woman, are described simply, naturally, and with much quiet humor. We have reason to believe that the view presented of travelling circus-life is, in the main, a correct one.

SCHWATKA'S SEARCH.

Schwatka's Search, etc. By W. H. Gilder. 8vo, 316 pp., maps and illustrations. New York: Chas. Scribner's Sons. 1881.

SOME years since, a story brought home by the captain of a small whaling vessel from Repulse Bay, in the Arctic, gave hopes that records of Sir John Franklin's expedition still existed in a cairn where they had been deposited. This cairn, it was said, could be pointed out by an Eskimo from whom the story was derived. Upon this clew, interest was excited, contributions obtained, and an expedition fitted out to recover the records. The party was composed of four white men and "Eskimo Joe," of *Polaris* notoriety. It was commanded by Lieut. Frederick Schwatka, U.S.A.; and Mr. W. H. Gilder, correspondent of the New York *Herald*, was second in command.

The public is already familiar through the daily press with the chief features of the search, and its complete failure so far as its main object was concerned. The present volume is principally made up from the letters of the author to the New York *Herald*, which, with some additions and illustrations, have been prepared for the press by some one not named, the author having joined the *Rodgers* on her mission to the vicinity of Wrangell Land in search of the *Jeannette*. In justice to Mr. Gilder, it may be said that much of that which calls for criticism in the book might have been less obvious if it had issued from the press under his own supervision.

The book is well printed, has a neat binding and a sufficient number of illustrations, some of which are spirited and suggestive, though coarsely engraved. The two maps given are well engraved and satisfactory, but the reader will doubtless share our surprise at finding that the map which illustrates the scene of the search for the records (and on which chapter xvii. forms a running commentary) does not appear in the book. At least, in none of several copies expressly examined for the purpose has it been found. Nor do the maps which exist fill the requirements of the text. We read: "The route down Back's River, as we found its course, is put down, while dotted lines show how it is mapped on the Admiralty charts" (p. 287). No dotted lines are shown as stated on either map. The proof-reading is not satisfactory, though most of the errors are patent and sometimes ridiculous, as on page 2, where we are informed that the "stern" of the vessel was covered with two feet of oak and three-quarters of an inch of iron.

The expedition added little or nothing to our knowledge of the fate of the Franklin party, but that little would be better appreciated were the claims of the preface less exorbitant. It was probable before the *Eothen* sailed that the Franklin records were lost; in fact, everybody had tacitly taken it for granted. Schwatka's search added to that probability, without adding essentially to the facts ascertained before—namely, that all the known cairns, graves, etc., had been rifled by natives or bears, and no records were to be found in them. The geographical results of the expedition were small, but as much as could be reasonably expected under the circumstances. The chief feature of it was the sledge journey of some 3,250 miles, during which the courage, energy, endurance, and perseverance of the party were put to the severest tests, and not found wanting. It is therefore not without reluctance that we criticise adversely the record of brave men's exploits; but it seems to us that the lessons taught by it are worthy of emphasis, and one of them is, that Arctic work at all commensurate with the expenditure of money, time, energy, and heroism which it requires, cannot be done by those who do not bring to it some knowledge of the problems involved. Furthermore, when to a slipshod, gushing, and exaggerated literary style the specialist finds joined statements which he knows involve fundamental error, he is apt to conclude that other statements of a surprising nature, which he has not the means of testing, are also not above suspicion. The grounds for this assumption, doubtless unjust in the present case, might have been avoided by the exercise of a very little technical knowledge.

When we read (p. 120) of the "simple sweet song, somewhat similar to the lark's," "gushing forth" from that "sweet little songster," a "snipe," which was shot for the Smithsonian, it is not without emotion, but of a kind not foreseen by the gunner who describes it. On page 48 we learn that, with Eskimo dogs, "often twenty days will intervene between meals." Taken literally, this is of course preposterous, as it is well known that four or five days *of work* without food is sufficient to break down the toughest dog; and if the dog gets food by theft or hunting on his own account, there would be nothing remarkable in his living ten years without a "meal." It is stated (p. 216) that "the thermometer would frequently register minus 50° and minus 60° (F.) when we were moving with a strong wind blowing directly in our faces. Such travelling as this is simply terrible, and it is astonishing that we were able to do it without encountering (*sic*) any severe frost-bites. Indeed, we travelled one day with the thermometer minus 69°, and, a gale blowing at this time, both white men and Inuits (*sic*) were more or less frost-bitten, but merely the little nippings of nose, cheeks, and wrists that one soon gets accustomed to in this country." After this we are not surprised to learn from the preface that "these statements have been doubted. The accuracy of the thermometers being questioned, they were tested and found to be curiously exact." Did the editor wish to have these statements properly supported, there was an easy way. The character, number, and make of the instruments might have been stated, the meteorological records of the expedition printed in full in the appendix, and the nature of the subsequent tests for accuracy described and authenticated by the name of the tester. Then we should not only have had satisfactory proof (if it exists) of the truth of the narrative, but we should also have had a valuable contribution to meteorology. Without this the Arctic traveller and the meteorologist alike will hold themselves justified in continuing to doubt, not the good faith of the narrator, but the accuracy of the thermometers.

Hall voluntarily set the example long before, which was followed by this expedition during the sledge journey, of living off the country with and like the natives. Hence it is inaccurate to say that this was the first expedition to do so. Scattered through the text are interesting and valuable references to native manners and customs. Here again it is painfully evident how a very little preparation would have made it practicable to increase this sort of material many fold. The author evidently had never heard of such a thing as a standard alphabet for recording the Innuit words. Even to the vocabulary which he gives, and which might have been valuable, there is no key, nor was there, apparently, any idea that one was necessary. In short, it is quite evident from this volume that the newspaper reporter, whatever his courage and virtues, will never prove a satisfactory substitute for the trained explorer. A serious charge is made (p. 230), and not modified, to the effect that the master of the vessel which took the party to the Arctic, and who originally brought down the story which prompted the expedition, actually carried away the provisions belonging to them after they had left the vessel. Upon these they depended for the succeeding year while awaiting a return-vessel, and for the want of them they nearly perished of famine.

The Wild Garden. By William Robinson, F.L.S. Illustrated by Alfred Parsons. New York: Scribner & Welford. 1881.

THIS is a second and greatly improved edition of a work which Mr. Robinson published under a similar name several years ago. Its aims are fairly set forth by the explanatory title of the new edition, which reads as follows: "Our Groves and Gardens made Beautiful by the Naturalization of Hardy Exotic Plants; being one way onwards from the Dark Ages of Flower Gardening; with suggestions for the Regeneration of the Bare Borders of the London Parks." By the "dark ages" Mr. Robinson means the deplorable condition into which modern flower-gardening has sunk from the undue development of the so-called bedding-out system. Mr. Robinson has attacked this absurd fashion with great energy and considerable skill, and to him more than to any other horticultural writer is due the partial regeneration of modern flower-gardening.

Something like a generation ago it became the fashion in Europe to fill flower-beds with masses of a few varieties of tender greenhouse plants. The effect was pleasing enough, and the custom, restricted within proper limits, was not without a certain merit. Brilliant, or rather garish, effects in colors could in this way be produced during a few warm months without exacting any particular display of the gardener's art; but the very ease with which such sensational effects could be produced led to an excessive use of this form of garden embellishment. The expense of such gardening is enormous in proportion to the results obtained, for new plants must be provided every year, only to be thrown away again as soon as the first frost has destroyed their short-lived beauty. Fifteen years ago a garden was famous in proportion to the number of thousands of colored-leaved or other tender plants which its owner could afford to plant out every spring, and all the resources of the master and his gardeners were taxed to spread out unmeaning and generally disagreeable lines and blotches of color. During nine months of the year the fashionable garden was empty and entirely without interest; during the other three it blazed with meretricious color. In such a garden there could be no sense of repose, no quiet and peaceful retreat, no sweet-scented flowers—for all such were treated as weeds and quickly exterminated. Color was wanted, and

in great masses; and any plant which could not be used to produce the desired effect was speedily condemned.

A fashion so absurd and so extravagant could not be long-lived; and the flower-gardening of the day in Europe, if not in America, where this bedding-out mania did not so easily at first take root, is already improving. Mr. Robinson has done good service to gardening by pointing out how a garden might really be made attractive, in a series of books of which the new edition of the 'Wild Garden' is the latest, and in many respects one of the most successful. Here he shows how many of the out-of-the-way nooks and waste places which abound in every large garden may be made beautiful and interesting by introducing into them colonies of bulbs and other hardy plants which thrive and increase in such spots, and, improving from year to year, give a charm to the garden which formal beds and geometrical designs can never produce. Wild gardening, too, if we may use such a term, has the merit of cheapness; and imitating nature does not tire as do, too often, some of the more formal efforts of the gardener's skill.

Mr. Robinson tells us what a wild garden is, and how it should be made and planted. In the list of subjects, however, which he recommends for such gardening are included many plants better suited to the English than to the American climate; and a revision of this part of the book, by some horticulturist familiar with the peculiarities of the American climate, would greatly add to its value as a working guide for the American gardener. Too much praise can hardly be bestowed upon the woodcuts made from Mr. Parsons's designs. They are superior in composition and execution to anything of the sort we have seen, and offer a refreshing contrast to the ordinarily dreary illustrations of contemporary horticultural literature.

History of the Discovery of the Northwest by John Nicolet in 1634, with a Sketch of his Life. By C. W. Butterfield, author of 'Crawford's Campaign against Sandusky,' etc. Cincinnati: Robert Clarke & Co. 1881. 8vo, pp. 118.

Mr. Butterfield, already known as an industrious student in the field of early American history, has produced a meritorious monograph upon the first discoverer of the Northwest. John Nicolet had been so entirely forgotten that he is not even mentioned by Hildreth, and his expedition was first brought to light by Mr. Shea in 1852, who placed it in the year 1639—the Jesuit relation having given no dates for it. Mr. Sulte, of Ottawa, found strong, and almost conclusive, reasons for referring it to 1634; and this date appears now to have been made certain by Mr. Butterfield's discovery of the mention, in 1635, of a treaty between the Winnebagoes and the Nez Percés, which could only have been negotiated by Nicolet. In this journey Nicolet went up the Fox River and crossed to the Wisconsin, being thus the first white man who visited the valley of the Upper Mississippi, although he did not reach the river itself. The book is a complete and exhaustive account of the life and explorations of Nicolet, amply fortified by citations from the original authorities, and provided with a good index.

Martin Luther and his Work. By John H. Treadwell. New York: G. P. Putnam's Sons. 1881. 12mo, pp. 243.

This last volume of the "New Plutarch Series" appears not to belong to the original scheme, but to be of American production, as it is copyrighted in this country. It is a book of very unequal merit—good in narration, so as to serve very well, as a "New Plutarch" should do, in the work of forming character by presenting to young readers the example of a strong and noble life; but faulty in style where the author departs from simple narrative and undertakes to comment and generalize. He makes no profession of independent research, nor even of broad scholarship, and his list of authorities contains none of the recent German publications upon the Reformation period, while even so recent and important an American work as Prof. Fisher's 'History of the Reformation' is omitted from the list. The relation of Luther's work to the great social convulsions of his time, as also to the political movements of the day, is very inadequately conceived, as is illustrated by the fact that the chapter (p. 162) headed "The Peasant War" says nothing at all about this war (which is, however, described in another part of the book, p. 142), but has instead a short and imperfect account of the Anabaptists at Münster—a totally different thing. The appendix contains some valuable illustrative documents—as, a summary of the ninety-five theses, and extracts from Luther's writings. A good engraving of Cranach's portrait of Luther adds to the value of the work, and there is a good index. On the whole, the book will be found wholesome and instructive reading, and that is all that the author undertook to make it.

BOOKS OF THE WEEK.

Albertsen, F. The Four-footed Lovers. Boston: Lee & Shepard. $1.

Alger, H., Jr. From Canal-Boy to President. New York: John R. Anderson & Co.

SCRIBNER & WELFORD'S NEW BOOKS.

A Royal Gift-Book by a Royal Author.

A BIRTHDAY BOOK. Designed by Her Royal Highness the Princess Beatrice. The work is printed in colors, on hand-made paper, and is illustrated by 15 full-page water-color drawings, reproduced in the highest style of chromo-lithography. Royal 4to, cloth extra, price $13 50.

*** Among the illustrated Christmas books that we shall issue during November, one of the most beautiful and interesting will be the above 'Birth-day Book' by Her Royal Highness the Princess Beatrice, the youngest daughter of Queen Victoria. The book will consist of illustrations in water-colors, very charmingly executed, and designed to represent by their appropriate flowers the twelve months of the year. The firm of J. G. Bach, of Leipzig, has been entrusted with the reproduction of these works of art in chromo-lithography. As an instance of the difficulties of this process in the present case, we may mention that the illustrations for August and December are printed in no less than seventeen colors, and that for April in eighteen. The volume, which will be produced in a manner worthy of its parentage, is intended to be one of the most magnificent gift-books of the year. As an appropriate accompaniment of this attractive volume, Scribner & Welford have prepared an Artotype reproduction of a late Imperial photograph of the Princess, which will be given to purchasers of it.

THE GREAT HISTORIC GALLERIES OF ENGLAND. Edited by Lord Ronald Gower, F.S.A., Trustee of the National Portrait Gallery. New Volume for 1881. Containing 24 Photographs from Paintings by celebrated artists. Imperial 4to, cloth, gilt edges, $12.

GREAT HISTORIC GALLERIES OF ENGLAND. (The Volume for 1880.) Containing twenty-four photographs, after Paintings by Murillo, Greuze, Pinwell, Holbein, Meissonier, etc., etc. Imperial 4to, cloth gilt, $12.

"Of all the countries in the world, Great Britain is the richest in art treasures; no one knows what England possesses in painting, sculpture, carving, gems, and prints." Thus wrote M. Burger, the celebrated French art critic, in his notice of the Exhibition at Manchester in 1857. And it would, indeed, be the work of a lifetime to become fully acquainted with the treasures, even of painting only, in this country. Although it is impossible that every one should be able to visit the Great Historic Galleries of England, and judge for himself of the beauty of their contents, yet—through the permission of their owners—representations of several of the most famous of these noble works of art have been given in these volumes.

MYTHS OF THE ODYSSEY of Homer, in Art and Literature. By J. E. Harrison. With 100 illustrations from Vases, Lamps, Terra-Cotta Bottles, Wall Paintings, Coins, Gems, etc., etc. 8vo, cloth, $6 75.

HOURS WITH THE PLAYERS. By Dutton Cook, author of a 'Book of the Play.' 2 vols. post 8vo, cloth, $8 40.

THE ART OF DECORATION. By Mrs. H. R. Haweis. Illustrated with 74 wood-engravings. Square 12mo, cloth, $2 50.

GUDRUN, and Other Stories. From the Epics of the Middle Ages. By John Gibb. With 20 illustrations. 12mo, cloth, gilt, $2 50.

CONTENTS: Gudrun—Hilda—Wild Hagen—Beowulf—Death of Roland—Walter and Hildegund, etc.

NEW ILLUSTRATED SERIES.

1. *THE PILGRIM'S PROGRESS* From This World to That Which Is to Come. By John Bunyan. With 12 illustrations by Thomas Stothard, R.A., reproduced in permanent photography. Demy 8vo, cloth elegant, gilt edges, $3.

2. *ROBINSON CRUSOE*, The Life and Adventures of. By Daniel Defoe. With a Memoir of the Author, and 12 illustrations by T. Stothard, R.A., in permanent photography. Demy 8vo, cloth, gilt edges, $3.

3. *ROYAL CHARACTERS FROM* the Works of Sir Walter Scott, Historical and Romantic. With 12 illustrations in permanent photography. Demy 8vo, cloth, elegant, gilt edges, $3.

UNIFORM WITH THE ABOVE:

1. *THE VICAR OF WAKEFIELD.* By Oliver Goldsmith. Illustrated with 12 permanent photographs, from paintings by Mulready, Maclise, and other eminent British artists. 8vo, cloth, gilt, $3.

2. *THE GIRLHOOD OF SHAKESPEARE'S HEROINES.* A Series of Fifteen Tales. By Mary Cowden Clarke. Rearranged by her sister, Sabilla Novello. Illustrated with 9 photographs from paintings by Dicksee and Herrick. 8vo, cloth, gilt, $3.

3. *TALES from SHAKESPEARE.* By Charles and Mary Lamb. Printed at the Chiswick Press, on superfine paper. Illustrated with 12 plates from the "Boydell Gallery," reproduced in permanent Woodburytype. 8vo, cloth, gilt, $3.

☞ For sale by all booksellers, or will be sent on receipt of price by

SCRIBNER & WELFORD,
No. 745 Broadway, New York.

The Century

(SCRIBNER'S MONTHLY)

FOR DECEMBER.

The November number of THE CENTURY MAGAZINE was pronounced by the *Providence Journal* "the most brilliant and striking, as it is the largest and most sumptuous, of anything yet known in American or European periodical literature." The December issue fully equals it. It contains:

First chapters of
W. D. HOWELLS'S SERIAL NOVEL,
"*A Modern Instance*,"
a story dealing with characteristics of American life. The second instalment of a new story,
"*Through One Administration*," by
MRS. FRANCES HODGSON BURNETT,
author of 'That Lass o' Lowrie's,' etc.

Portraits of, and papers regarding, the late
PRESIDENT GARFIELD.
A Full-Page Portrait, engraved by Cole.
Garfield at Sixteen, engraved by Kruell, from a daguerreotype in possession of the family.
"*Characteristics of President Garfield*," reminiscences of twenty years, by E. V. Smalley.
The Story of his Illness, told by the physician in charge. This contribution from Dr. BLISS is his first untechnical account of the case. The paper contains anecdotes and reminiscences not before printed.
"*Strangulatus pro Republica.*" A reproduction of the words written by President Garfield during his sickness; furnished by Col. Rockwell.

The number also contains a frontispiece portrait of
DR. J. G. HOLLAND,
late Editor-in-chief of this magazine, with an estimate of his life and works, by his friend Dr. EDWARD EGGLESTON, and other interesting matter regarding Dr. Holland.

An authorized sketch of the literary life of
ROBERT BROWNING,
including portraits of Browning in 1859 and in 1879, the latter a full-page picture.
A LIFE-MASK OF LINCOLN,
made just before his first nomination to the Presidency, and reproduced for the first time, making a full-page portrait of Lincoln's face. Among other illustrated articles are: A thrilling story of "*A Cruise in a Pilot-Boat*," by S. G. W. Benjamin, with twelve illustrations by M. J. Burns; "*The American Student at the Beaux-Arts*," by Richard Whiteing, with fourteen illustrations; "*A Colonial Monastery*," with twelve illustrations; "*The Hieroglyphs of Central America*," by Edward S. Holden, fully illustrated; other interesting articles, stories, poems, etc.

Price 35 cents; $4 a year. A year's subscription, with the large photograph portrait of Dr. Holland (size, mounted, 21x27), $6 50.

Booksellers and newsdealers receive subscriptions; or remittance may be made by postal-order, draft, check, or registered letter to the publishers,

THE CENTURY CO.,
Union Square, New York City, N. Y.

A new Story by LYNDE PALMER,

Author of 'John Jack,' 'Archie's Shadow,' 'One Day's Weaving,' 'Drifting and Steering.'

Jeannette's Cisterns.

A Story (not a juvenile) by the above popular author. Being the only production of her pen for a number of years, this book will, we doubt not, be looked for with interest, and add to her long-time popularity as an authoress. 1 vol. 12mo, $1 25.

The Nation.

NEW YORK, THURSDAY, DECEMBER 1, 1881.

The Week.

THE prosecuting attorney in the Guiteau trial has endeavored to show that the motive power which impelled Guiteau to assassinate President Garfield consisted in the resentment caused by his failure in the pursuit of office; in other words, that it was a disappointed officeseeker who took revenge on the dispenser of the patronage. Guiteau himself, in the speech delivered by him on Friday, gave his own view of the question. According to his clear and emphatic declaration, it was not the disappointment of the unsuccessful officeseeker that made him shoot President Garfield, but it was "the Deity and the newspapers"—the latter insomuch as he did "what the papers said ought to be done"; and he insists that certain newspapers should be held to equal responsibility for the act with himself. The theory advanced by the prosecution strips Guiteau's crime of all political significance, while the theory advanced by himself is intended to give to it an exclusively political character, and, as he undoubtedly thinks, a corresponding prestige. In order to arrive at the truth we have to combine these two theories. It is most probable that Guiteau would never have thought of committing an assault upon President Garfield had he not been brought to Washington in the pursuit of office, and looked upon President Garfield as the man who had offended him by the refusal of a favor; and it is equally probable that the bitter feeling caused by his disappointment would never have driven him to so atrocious a deed had not the quarrel of factions then going on heated his imagination and made him believe that an attack upon the President's life would be an act of great political consequence and make him a sort of hero.

The conduct of Guiteau's trial is surrounded by many difficulties, and Judge Cox is entitled to a more indulgent criticism than most judges presiding in a criminal court would be. His intimation on Friday, however, that he would have Guiteau gagged if he did not keep quiet, is not calculated to inspire confidence in his management of the case. A prisoner's right to be present in court is not the mere right that his body shall be in the court-room, but that he shall be there in the full enjoyment of all his faculties, and especially of speech, in order that he may confront the witnesses against him, make suggestions, and give information to his counsel. The objection to removing an obstreperous prisoner from the court is that it would deprive him of this right; but to put a gag in his mouth to quiet him, and then tell him that his right to be present during his trial is not infringed, is about as ludicrous a method of getting over the difficulty as could have been suggested. If Guiteau is to be corporeally repressed, would it not be just as well to have an officer of the court give him a beating every time he interrupted the proceedings? This would in no way interfere with his right to be present, or to confront the witnesses; in fact, flagellation is rather favored by the spirit of the common law, and the means of punishment for contempt are wholly within the discretion of the court.

The fact reported by the Director of the Mint that the amount of gold and silver received and operated upon at the main and branch offices during 1881 was $50,000,000 in excess of the amount received in any other year, might remove all apprehension of a dearth of the precious metals. It appears, however, that nearly twice the sum of this excess, or more than $95,000,000, is due to the flow of gold from foreign countries. If from any cause the direction of the current should be changed, a different showing would be made by the mint reports. The silver bullion amounted to nearly thirty-three millions, of which more than twenty-seven millions were turned into dollars, the remainder taking the form of subsidiary coins. Of the silver dollars there have been made altogether $100,672,705. The popular desire for these coins for actual handling has been satisfied with thirty-four millions in round numbers, after the employment of various and ingenious devices to get them into circulation. Fifty-eight millions in round numbers are in the Treasury, representing outstanding certificates of a like amount. Meanwhile the coinage goes on at the rate of some $2,300,000 a month, to complicate still further the unsolved silver problem. The topic is urged upon the attention of Congress by the Director of the Mint.

Referring briefly to the familiar history of the Paris Monetary Conference, to the slight encouragement given to the silver movement by European nations whose coöperation is indispensable, and to the vague hope that something may yet be accomplished, he shows that he scarcely looks for any favorable result. It is a question for our "serious and early consideration," he says, "whether it is not desirable to suspend the further coinage of silver" until an agreement for an "unlimited coinage of silver and gold at a common fixed ratio" shall be made by "the principal commercial nations." There is danger that, instead of silver's becoming a universal legal-tender, six hundred and fifty millions now so accepted in some parts of Europe will be demonetized—an event in which the United States "could not, single-handed, . . . sustain the value of silver from the inevitable fall." The Director insists that this country "has done its part toward retaining silver as a monetary agent," and he evidently believes that the struggle, if continued, will be Quixotic rather than heroic. He suggests another consideration which should have weight even with bi-metallists. If an international agreement upon a double standard should be effected, "neither our ratio of comparative valuation, nor even one based upon the present exchangeable value of gold and silver, will probably be adopted"; so that the larger our investment in silver dollars of the existing weight and value, the more costly and troublesome would be conformity to the new international ratio.

Special Treasury Agent Tingle, in his annual report, once more urges the abolition of twenty-two ports of entry, at which during the past year not one dollar of duties has been collected, and thirty-two districts in which "the year's collections from all sources have not equalled the year's expenses." He adds that "this is true of many a previous year." All these custom-houses, he says innocently, in support of his argument, "are required to be kept up with all the formalities of active establishments, with deputies, inspectors, and clerks to make official returns often of 'no transactions' to the accounting officer." Special Agent Tingle, however, when he makes this recommendation as called for by "sound business considerations," shows himself a good deal both of a "doctrinaire" and a "theorist," and displays less comprehension of our system of government than seems to us desirable even in a subordinate executive officer. He knows, of course, that custom-houses under our system have two objects: one—the principal one—is to furnish "workers" for the party in power; the other is to collect customs duties, if there are any to collect. But he apparently does not know that the collection of the customs is a very secondary and subordinate object. A custom-house in fact hardly loses any of its value because it collects no duties. It still fulfils its chief function by employing a body of faithful men to run primaries and attend nominating conventions. As these duties can of course be best performed in places where no foreign goods are ever landed, the maintenance of districts in which there are no "transactions" seems to us not simply desirable, but imperative. The phrase "sound business considerations," used by Mr. Tingle, is positively sickening. It has long been a favorite shibboleth of "reformers," and nothing more clearly marks the theoretical Mollycoddle, who thinks he can improve on a system which was in operation before he was born, and which will last as long as human nature. What we really need is more custom-houses which make no demands on the time of the inspectors and clerks, and leave them free for their more important duties.

There were no further developments of bank troubles during the week, and the excitement in Boston and here respecting the breakdown of the Pacific National and the embarrassment of the Central National passed away early. The New York banks which were subjected to a drain of currency to Boston, to Southern cities for cotton, and into the Treasury for duties on imports and taxes, made a much better statement on Saturday than was expected. They showed that on the

average of the week they still have $971,000 more than a 25 per cent. reserve, where a year ago they lacked $105,675 of such a reserve. The Treasury was unable to buy any bonds at par and accrued interest, and on Monday Secretary Folger offered to prepay, without rebate, this week, beginning Wednesday, any part of the $9,688,050 3½ per cents called for redemption December 24. It is expected that this will in the next few days bring several million dollars of cash out of the Treasury. The money market here during the week was fully active; and in London the rate for discounts advanced 1½ per cent., although the Bank of England did not change its posted rate (5 per cent.), which is still above the advanced actual rate. The market for bills on London was strong and at times active, mainly on account of transactions growing out of the settlement of maturing loan bills; there is no prospect of gold exports and little of gold imports for the next few weeks. The Stock Exchange markets were agitated by a reported renewal of negotiations for the settlement of the trunk-line railroad war, and while definite information was wanting, the impression existed at the close of the week among the well informed that an effort is making to settle. General trade continues good throughout the country. Exports to foreign countries are, however, falling off from the heavy figures of a year ago. The price of silver continues very steady, being at the close 51⅞d. per ounce in London; here 412½ grains of silver, the amount contained in the "dollar of the fathers," at the close were worth about 87 cents.

Jay Gould's acquisition of the Grand Opera House by purchase is an event of some interest, because it brings out in a strong light the difference between the Gould of to-day and the Gould of twenty years ago. There was no method of acquiring title to property which the old concern of Fisk and Gould held in such contempt as buying it, and many a merry laugh they must have had together in this very Opera House over the absurdity of purchasing things which, as Fisk in his coarse way used to put it, could be "rescued" away from their owners just as well without the payment of any money at all. A title founded on what lawyers call adverse possession has such an obvious advantage over the ordinary title by purchase, that it was hardly to be expected that Gould would, after laying the foundation of his fortune by the one, resort afterward to the other. But this is what he seems to be doing. All his newspapers and many of his railroads have been bought, and the purchase of the Grand Opera House, which he and Fisk a few years ago seized and held as a fortified place of amusement, is a striking indication of his complete abandonment of his early method. His example will, no doubt, have its effect even in Wall Street, though how far it will be carried there it would be useless to try to predict. In other countries the interval separating the period in which property is acquired by "rescue" from that in which purchase comes into play has usually been very great; if such a change of custom were effected in Wall Street in the lifetime of a single man, and mainly through his agency, it would be a new illustration of our extraordinary rate of national progress as well as of the remarkable moral qualities of Jay Gould.

United States Assistant District Attorney Beatty of Utah has written a pathetic letter to the New York *Tribune*, deploring the inability of the law officers of the Government to secure convictions under the statutes against polygamy. The difficulty is, he says, that it is impossible to get evidence. To prove polygamy you have to prove a previous marriage, but this you can never do, because the Mormon marriages are secret. The first wife cannot be called on to testify without the husband's consent, and she would not testify even if he gave his consent. The second wife cannot testify as long as the first marriage is in dispute. Then there is no law, Federal or Territorial, against "adultery or lascivious cohabitation," which Mr. Beatty seems to deplore greatly. But we do not see how such a law would help him out of his trouble. There would be as much difficulty in obtaining evidence for the enforcement of this as for the enforcement of the statute against bigamy. The Mormon husband would not confess in open court. His wives would not testify against him or against each other. We are hardly prepared to make the living of several women under one man's roof presumptive evidence of immoral relations, nor are we prepared to employ detectives to haunt the houses of a large population for proof of "lascivious cohabitation." We were in hopes, considering how much vapid and aimless writing there is on the Mormon question, that Mr. Beatty would let us know in detail, before he closed, the kind of legislative remedy which he, an experienced law officer of the Government, proposes for the evils he describes. But he does nothing of the sort. On the contrary, like nearly everybody who touches on this subject, he launches into rhetoric, and inquires solemnly whether "governments are to be mere shadows instead of substances," and "whether they are to yield to evils instead of governing or destroying them," and whether "fifty millions of Americans are to yield their opinions to a hundred thousand people, of whom half are from the pauperized elements of Europe." It is easy to see that even if he got answers to all these questions he would be no better off than he is now.

The reason the Government finds it so hard to deal with polygamy is that polygamy is part of the marriage question, in which the Federal Government has no real *locus standi* whatever. There is, if we may use the expression, no Federal sexual morality at all. There ought to have been, doubtless, a provision in the Constitution giving it jurisdiction of marriage, but there is not. It is much more important, really, that marriage should be within its control, than bankruptcy, and very much more important that the United States should live under a uniform marriage law than under a uniform bankruptcy law; but at present we cannot have one. The result is that each State is trying experiments on the marriage relation, some of which have really done it far more injury than the Mormons can ever do it, and which Mr. Beatty's colleagues have to witness with the composure of helplessness. The divorce laws of some States have made the married relation dependent on the inclination of the parties. As a framework or foundation for the family it has little or no value except what the parties give it. In so far as it plays the part of a social institution in these States it is owing to the character of the husband and wife, and not to State legislation. The tendency, too, in most of the States, is not toward greater strictness, but greater laxity. The evil is a huge one—a far more serious one than Mormon polygamy, for the old reason that there is no such badness as the badness of the good. Our moralists and philanthropists are deploring it every day, but with comparatively little effect. The result is that there is really no high and stern morality in the marriage question, in political circles at least, to draw on for the extirpation of the Mormon iniquity. The men in Congress who thunder against polygamy, and the law officers who go out to punish it, and demand fresh, vague, and extraordinary powers for the purpose, are not as full as they might be of horror of matrimonial laxity. They see too much of it at home. They know that Federal officers witness much unpunished use of marriage "as a cloak for base instincts," as Mr. Beatty says, in the old Christian States as well as in Utah. This does not excuse polygamy, or make it any more tolerable; but it goes a good way to explain why the attacks on it are not more successful.

The story of the latest plot against the Czar shows that the surprises which the scientific extension of the means of destruction has in store for us are by no means exhausted. A balloon was to be sent up near Gatchina, carrying a quantity of dynamite and explosive fire-balls, which were to be dropped into the palace yard. Result—explosion, fire, and great confusion, in the midst of which the Nihilists were to seize the Czar and his family, dead or alive. On the discovery of the plot the police made numerous arrests, and the imperial household are said to have determined to leave Gatchina at once. This new use for balloons has an interest for the inhabitants of this city, as it is believed by some military men that, in case of war between the United States and any really progressive foreign power, a fleet sent against New York would use dynamite balloons for purposes of perpendicular bombardment. In regular warfare it would be easier to conduct operations of this character successfully than in conspiracies such as that of the Nihilists. The inflation of the balloon will always be apt to attract the attention of the police, and the most cunning Nihilist will probably hereafter find it difficult to get his apparatus in readiness without detection. Even innocent balloonists will probably suffer from the suspicion which the Nihilists have brought upon their calling, and thus the progress of Russian aerial scientific discovery itself be retarded. This seems hard on the professional aeronaut. But such baleful effects

of crime upon persons in no way responsible for it constitute one of the constant mysteries of life.

M. Paul Bert has been trying to justify his appointment in an address to his subordinates on taking the Ministry of Public Worship. This Ministry has only recently been attached to the Ministry of Public Instruction in place of the Fine Arts, which have been erected into a separate department. His excuse is that the position of the Ministry of Public Worship is "neither religious nor anti-religious"; that it is a ministry of police simply, and that he, as a man "brought up in the study of science and law," is as competent to fill it as anybody. The sole reason for having a Ministry of Public Worship is, however, that a very large body of Frenchmen and Frenchwomen are sincerely attached to the Church, and consider religious services the most solemn and important of human duties. To them it must be rather startling to have for the state supervision of these services a gentleman who looks on the whole thing as an English District Commissioner in India looks on the worship of Juggernaut—as so much mumbo-jumbo, at which he secretly laughs. It cannot but be mortifying for the ministers of all denominations to have to transact business with an officer who considers them either gross impostors or harmless dupes, and pays them their stipends as a deplorable concession to a degrading popular superstition. It does not do credit to science, either, that one of its ministers should be willing to occupy a position in which he will constantly have to feign respect for various things which he really despises.

The continuance of disturbances and outrages in Ireland shows, as was to be feared, that one lesson of the Land Act—the lesson that the way for Irishmen to get large concessions from Englishmen is to be turbulent—is about to bear fruit. Indeed, it may be said to be the great lesson of Irish history. What Englishmen have been saying to Ireland for the last century has been substantially this: "Nothing whatever to investigation or discussion, or reports, or reason, or justice in the abstract, but anything you please to murder, arson, and cattle-houghing." It is not surprising that under these circumstances murder, arson, and cattle-houghing should have risen in the eyes of the peasantry to the rank and honors of lawful war. "Surely," they say, and not unnaturally, "instrumentalities which brought us Catholic emancipation, the abolition of tithes, the disestablishment of the foreign Church, and the reform of the land tenure, must be as respectable as pitched battles between opposing armies. They must, too, have some great dialectical power, because they penetrate and convince the English mind. A few more murders, then, brethren, a few more cows' tails cut off, a few more blowings up of houses, and our country will be glorious and free." The task before Englishmen now is apparently either the continuance of repression long enough to satisfy the Irish mind that outrages have accomplished all the good they can ever accomplish, or the committal of the Irish administration to Irish hands. The first of these would require apparently one hundred years for its execution. The second will have to come. Mr. Gladstone, Mr. Forster, and the other benevolent Englishmen will have to give up trying to save the Irish from themselves. The true remedy for Irish woes is the one by which every people which is worth anything has been saved—viz., the process described by Bismarck as "frying in their own grease." When outrages no longer annoy Englishmen or extract threatening articles from the London *Times*, they will cease.

On Thursday the Liberal Opposition in the German Reichstag opened fire upon Prince Bismarck's "social and economical policy." A vigorous speech was delivered by Herr Richter, who is the ablest speaker upon economical questions on the Liberal side of the House, and it is said to have produced so extraordinary an effect that no representative of the Government ventured upon an immediate reply, but preferred an adjournment for the day. Herr Richter's pointed remark that every German willingly recognized the immortal services rendered by the Chancellor, but that the German people had come of age, and demanded a controlling voice in the government of their affairs, no doubt expresses the feelings of a majority of the nation. Some of our contemporaries mention the election of a Conservative to the Presidency of the Reichstag as proof that after all the Chancellor has a Conservative majority at his back. This is a mistake. While it is true that the Liberals are in the minority, the different groups which coöperated in the election of the President of the Reichstag are by no means bound together by common interests and aspirations so as to form a reliable ministerial majority. There are not only strong antagonisms among these groups themselves, but the relations of the strongest of them the Clericals, with the Chancellor have been of a very unfriendly character, and depend now upon the greatness of the concessions the Chancellor may be willing or able to make to them at the expense of his former policy with regard to the Church. Prince Bismarck himself therefore feels by no means sure of his game. His latest utterance, in response to an anti-Semitic address, that he could decide his own personal position only by the course of the Reichstag, has a very uncertain sound, and may be intended as a repetition of his old manœuvre of threatening his withdrawal from the Government if the Parliament refuses to do his bidding. The success of the Liberals at the recent elections, indeed, did not consist in winning a clear majority of the seats in the Reichstag, but in defeating the Government candidates where the greatest efforts had been made for them, in increasing the number of their representatives, and in showing much greater popular strength than had been expected.

The rumor that Turkey proposes to cede a slice of Armenia to Russia in lieu of the war indemnity (about $150,000,000) would, if true, create a new and interesting complication in English politics. The war indemnity now stands in the way of a "readjustment" of the Turkish debt by an agreement with the bond holders. Under this readjustment the Porte expects to be able to get hold of a little more cash, and, though it never expected to pay Russia a cent, it would probably be now glad to do anything to get her out of the way—even to cede territory. The Beaconsfield treaty, however, under which Cyprus was assigned to England, contained a guarantee of the Sultan's Asiatic dominions against Russian aggression, for which Cyprus was the consideration. It contains no pledge, however, binding the Sultan not to cede territory to Russia voluntarily, this probably never having entered the Jingo head as a possibility. If it now comes to pass, the question will arise whether under the treaty the Sultan cannot demand Cyprus back. If he should demand it, the Gladstone Ministry would be puzzled to find a good excuse for refusing it. If they said they held it as a consideration for a guarantee not only that Turkey should not cede territory under duress, but that Russia should get none by any means, the Tories would ask why Mr. Gladstone had denounced the treaty as "insane," and why, if he did not mean to fight in Asia Minor, he kept Cyprus at all.

The seizure of Garcia Calderon and his Minister of Foreign Affairs by the Chilians introduces a new complication into the South American imbroglio, the consequences of which it is difficult to foresee. The arrest was made nominally to prevent Calderon from carrying on functions of government which interfered with the martial law established by Admiral Lynch, but probably, in reality, because Lynch found that Calderon's Government was refractory as to a war indemnity. The Peruvians owe a debt of some $200,000,000 and are entirely bankrupt, but they still have printing-presses and can turn out paper money in any required quantity. They, therefore, had no objection to printing a fair war indemnity, but for that purpose it was necessary for Calderon to retain control of the Treasury—that is, of the printing-presses. On the other hand, the Chilians want the indemnity paid either in hard coin, which Peru cannot get, or in money's worth, and it is no doubt on this account that Admiral Lynch regards the continuance of Calderon's functions an interference with his occupation. The act of winding up his Government in this summary way is a notification to the Peruvians that Chili means to settle the terms of peace herself, and that the feeling of the conquered country as to a cession of territory will not be regarded at all. Our Minister, Mr. Hurlbut, was accredited to Calderon, and it is now said that he will proceed to "recognize" Calderon's Vice-President Montero as his constitutional successor. Montero was a short time ago a guerilla chief under Pierola, but deserted him to take office under Calderon. No such "recognition" will, however, affect the facts of the case, which are that the actual Government of Peru at the present time is that administered by the Chilian commander.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

MR. SCOVILLE began his opening address for the defence in the Guiteau trial on Tuesday last. He spoke in a "plain, easy, matter-of-fact style," and confined himself to the insanity plea. He reviewed the history of the Guiteau family and the prisoner's life. Guiteau's paternal grandfather was a physician who settled in Utica ninety years ago. He had ten children, several of whom became insane. Guiteau's father was the last survivor of the ten. He was eccentric and peculiar, especially in his religious views, and during the last six weeks of his life was deranged most of the time. Guiteau's mother was "sickly," and was ill with a fever at the time he was born. She died when he was seven years old. Mr. Scoville then went on to give a detailed account of the prisoner's life, relating many of his eccentric sayings and doings. Guiteau joined the Oneida Community early in life, and afterward became a lawyer and then a lecturer, and failed as both. A number of witnesses were called, who testified to his "eccentricity" at all points of his career. Mr. Scoville closed his opening address on Wednesday, and the examination of witnesses for the defence began. As Guiteau had been acting in an obstreperous manner throughout Mr. Scoville's address—at times contradicting him flatly, interposing remarks of his own, and generally interrupting the proceedings—on Friday Judge Cox threatened to have the prisoner gagged unless he behaved himself. Among the witnesses examined on Saturday were Senator Logan, and Guiteau's sister, the wife of Mr. Scoville. Senator Logan testified that he had told a lady at whose house Guiteau was boarding that he "thought he was crazy, and that she had better not have him in her boarding-house." Mrs. Scoville corroborated the testimony which had already been given of the prisoner's very eccentric conduct at various times in his life. On one occasion he threatened her with an axe. On Monday among the witnesses examined was the business manager of the Oneida Community, who testified that the prisoner's most striking characteristics while in the Community were his "excessive egotism" and religious "fanaticism." Mr. John W. Guiteau, the prisoner's brother, was also examined. His testimony corroborated that which had already been given in regard to the prisoner's very marked eccentricities, but he damaged the defence by refusing to admit that his father was insane, and by his disinclination to admit that insanity was hereditary in the family. The prisoner himself was next called to the stand to identify a number of his letters. On Tuesday Guiteau was again put on the witness stand, but he refused to testify for some time on the ground that he "felt sick," and was not in a "talkative mood." He was finally persuaded to talk, however, and under Mr. Scoville's interrogations gave a rambling account of his life from his earliest recollections. All through the trial Guiteau has caused considerable disturbance in the court by his actions. It is stated that one of the reasons why the court has not taken more effective measures to suppress him, is that there are a number of medical experts present every day watching him with a view of deciding upon the question of his insanity, and that it has therefore been deemed advisable to allow him a certain latitude.

Mrs. Garfield has placed the literary estate of the late President in the hands of Colonel A. F. Rockwell, who is charged, under her direction, with its disposition. Joseph Rudolph, the administrator, has appointed General Swaim his attorney and financial agent. Mrs. Garfield is overwhelmed with letters begging for money from all parts of the country, and from all conditions and classes of people.

Another Star-route contractor, Alvin O. Buck by name, has been arrested. The charge against him is that he gave worthless bonds. In one case it is stated that he was declared a failing contractor and in default $26,000, and his bond was found to be worthless. He made an offer to compromise for $2,000, and the late Sixth Auditor Tilley assented to the proposition, and is said to have procured the approval of the Postmaster-General. This case of Buck is another example of the reckless way in which the Star-route contracts were awarded.

The Government failed utterly to make out a case against Deputy Sixth Auditor Tilley in the second of the Star-route cases, as seemed probable, owing to the non-appearance on the witness stand of the contractor Brott. Commissioner Bundy discharged Tilley on Tuesday. The Government seems to have been very remiss in not taking more effective measures to secure the appearance of Brott, upon whose testimony the whole case rested.

Mr. A. M. Gibson, special attorney for the United States in the matter of the Star-route service investigations, recently submitted a report to the Acting Attorney-General showing how the frauds became possible, the nature of the operations of the ring, and the responsibility of Assistant Postmaster-General Brady and Sixth Auditor Tilley therefor. In the course of a correspondence which ensued between Mr. Gibson and Acting Attorney-General Phillips upon the submission of this report, Mr. Phillips wrote to Mr. Gibson that there was neither "commission nor oath of office" upon the files of the Department of Justice creating Mr. Gibson Assistant Attorney of the United States (as the latter had signed himself), and that therefore his report could not be received. Mr. Gibson, on the other hand, insists that he was appointed by Attorney-General MacVeagh, and there the matter rests. This illustrates, again, the loose way in which the Star-route prosecutions have been managed. Since the defeat of the Government in the preliminary cases against Brady and Tilley there seems to be great danger of the whole matter falling through.

It is said that President Arthur's message will not be printed, as has been customary of late years, before it is sent to Congress.

The Speakership of the House of Representatives has been attracting considerable attention in political circles in Washington during the week. Messrs. Hiscock, Keifer, and Kasson are the leading candidates for the office at present.

Ex-Speaker Randall of the House of Representatives is reported to have said that a refunding bill, modelled on the one vetoed during the last session, will be introduced in the House at an early day.

It is probable that when Congress meets, the State Department will be called on for copies of the instructions to Ministers Hurlbut and Kilpatrick, and all correspondence relating to the situation in Peru, and it is thought likely that both of these gentlemen will be recalled.

It is rumored that the recent complication arising from the opposite course of the United States Ministers to Peru and Chili is due to a lobby in Washington, which holds large claims against Peru.

Mr. Tingle, Supervising Special Agent of the Treasury Department, has submitted his annual report on the Customs Service. He says that "many of the vexatious requirements prescribed by law and used in customs transactions might be discarded with positive benefit to the public service," and submits a number of suggestions for the relief of importers and shipowners. Among them are the substitution of a simple declaration, signed by the importer and attested by a notary, for the present system of requiring an oath, which, he says, is "as a rule merely formal, and serves no purpose except to cause inconvenience to importers by compelling their personal attendance at the custom-house." Another suggestion which Mr. Tingle makes is that many of the customs districts should be consolidated. "There are twenty-two ports of entry at which not a dollar of duties has been collected for a whole year, and this is true of many previous years."

Commissioner Dudley of the Pension Bureau states that over $100,000,000 have been paid out for arrears of pensions, and that it will require $235,000,000 more to pay the remaining claims which have already accrued under the Arrears of Pensions Bill. Commissioner Dudley thinks that the attention of Congress should be called to the nation's liabilities under the bill, and that provision should be made for their discharge. He also says that he wishes authority to employ a number of lawyers to make a personal examination of pension claimants and their witnesses, and to determine the correctness of the statements set forth in their affidavits. The necessities of the Pension Office seem to be pressing, and Congress will be forced to consider them at an early date.

In his report to Secretary Hunt, Admiral Rogers of the Naval Academy advocates a decrease in the number of cadet midshipmen and cadet engineers. He says that there are now two hundred graduates of the Naval Academy who are waiting promotion to the grade of ensign, which is the lowest commissioned grade, and that some of the young men who graduated last June will have to wait at least eight years longer before obtaining this promotion.

The unanimous report of the Naval Advisory Board relative to the construction of vessels for the navy has been submitted for the consideration of the Secretary of the Navy, and will appear in his annual report, which will be given to the press in a few days.

Professor Hough, Chief of the Division of Forestry in the Agricultural Department, who has been in Europe collecting data on forestry, has returned and will make a report of his investigations, with recommendations to Congress for the planting, preservation, and maintenance of forests on the prairie and desert lands of the United States,

The Virginia State Board of Canvassers announce the majority of Mr. Blair, the Readjuster candidate for Attorney-General, to be 12,273. It is stated that the Readjusters will have a majority of twenty-two in the Legislature on a joint ballot.

The Philadelphia Citizens' Committee of One Hundred has been working hard to get the Reform party into shape so as to carry the municipal elections in February. "Gigantic frauds" are being "unearthed" in the Tax Office, which are said to implicate other officers of the City Government. The whole matter is to be brought before the City Councils on Thursday next, when it is expected that some startling revelations will be made.

The Atlanta Exposition continues to draw immense crowds. On Thursday 19,320 people visited the Exposition. The town has been crowded to excess throughout the week. Great interest is taken in the South in the convention of planters, agriculturists, and mill men who will meet at Atlanta on the 6th of December. Thousands of persons are expected to attend this convention, which will doubtless result in great benefit to all Southern industries.

Judge Beardsley has refused the application of the Malleys for bail, and they will have to remain in jail to await the decision of the Grand Jury, which meets in January.

The billiard matches which have been played in New York during the last week for the cushion-carom championship, and which brought out most of the best billiard players in the United States, resulted in a victory for Joseph Dion, who carried off the diamond championship emblem. Schaefer won the second prize.

FOREIGN.

In the debate on the budget in the German Reichstag, on Thursday, Herr Richter, the

leader of the Progressists, delivered a long speech attacking those who support the economical policy of Prince Bismarck as set forth in the Emperor's message. He is said to have spared "neither the real nor the nominal author" of the message. He said that "while ready to recognize Prince Bismarck's immortal merits, the German people now claim to be of age, and to have a voice in the settlement of their destinies." The Opposition assert that they achieved a "great triumph" on Thursday, and that Richter's speech produced such a powerful effect that none of the Government's representatives were for the moment prepared to reply, thus necessitating the sudden closing of the debate.

The debate on the project of the incorporation of Hamburg in the Zollverein was begun in the Reichstag on Monday. Great interest was lent to the debate by a speech of Prince Bismarck, in which he said that the point involved in the question of the incorporation was the carrying out of constitutional provisions. In this he would not allow himself to be hindered, but would endeavor by every justifiable means, as long as he was compelled to retain office, to consolidate the Empire. He referred to the opposition which his efforts for the consolidation of Germany had received from the Liberals. The debate ended in a resolution to refer the bill to a committee, which should clear up existing doubts as to the constitutional aspects of the question.

At a Parliamentary dinner in Berlin Prince Bismarck maintained that the recent elections should by no means be taken as a condemnation of the policy of the Government, since, reckoning by the number of votes polled, the Conservatives alone among the principal political parties scored a substantial increase as compared with the elections of 1878. This year the Conservatives polled 870,358 votes against 749,494 in 1878.

M. Gambetta has had an interview with General Chanzy, late French Ambassador to St. Petersburg, in the course of which the premier declared that the foreign policy of France would not be changed. Regarding the internal policy, he said that the last elections indicated that the country required the adoption of a more decided line of action against the clergy.

M. Paul Bert, the new French Minister of Public Worship, in receiving the staff of his department on Friday, said that the administration of the Department of Worship had no concern with doctrines, as this office was one of police in the highest acceptance of the term. He added that he had no project of making the clergy a national body, and would abstain from violence or party molestation, and that the people would see that he was not a "revolutionist or a blunderer, but a man brought up in the study of science and law."

In consequence of a debate in the French Chamber of Deputies on Thursday, the Minister of the Interior has requested the prefects to prepare lists of all offences committed by priests in the exercise of their functions.

It is stated that as soon as the appropriation bills are passed the French Government will prorogue the Chambers. During the recess the Government will prepare the various proposals it intends to submit on the reassembling of the Chambers in January. The most important question will relate to the revision of the Constitution.

The result of the French elections for Senatorial delegates indicates that the Republicans will be victorious in twenty-five departments out of thirty-two.

Mr. Morton, United States Minister to France, had a conference with Premier Gambetta on Wednesday last with reference to the importation of American pork into France. The result of the conference has not yet been authoritatively stated.

M. Roustan, French Minister at Tunis, declares that he will soon ask to be transferred to another post.

There has been little news of importance from Tunis during the week. A portion of General Forgemol's division reached Gafsa after fighting the whole way. The Porte has applied to the Bey for a large sum of money to compensate the Moslem refugees for their losses from the bombardment of Sfax by the French, and the Bey is reported to have forwarded a communication to the French Minister on the subject. There is a report that Lord Lyons, the British Ambassador to France, informed the late French Cabinet, on behalf of both England and Spain, that they could not view the entry of French troops into Morocco as benevolently as they had their entry into Tunis.

Señor Martinez, the Spanish Minister of Justice, has said that the Government was negotiating with the Vatican for the arrangement of the civil-marriage question, and hoped for a favorable result, but that in a contrary event the Government would maintain the principles of the bill on this subject and uphold the prerogative of the state. It is stated that the prelates who belong to the Senate intend to submit a protest against the bill, and will afterward quit the Senate in a body. On Friday, a Senator from Cuba asked the Government whether it was disposed to open negotiations with England for the restitution of Gibraltar, and the Minister of Foreign Affairs replied with true diplomatic indefiniteness that "the Government would act in accordance with the best interests of the country and the maintenance of good relations with friendly powers." The question of buying Gibraltar from England is being considerably discussed in Spain.

Lawlessness is increasing in Ireland. It looks as if the policy of the "no-rent" manifesto were being adhered to to a much greater extent than had been anticipated. Incendiarism, petty outrages, and threatening proclamations are reported to be everywhere rife. Lord Cowper, Lord Lieutenant of Ireland, in a speech at Belfast on Wednesday, said that he held no hope that the Government would be able at present to relax coercive measures. The Land Commissioners have issued a notice calling attention to the power which they possess to hear applications from laborers to compel farmers to provide better dwellings for them. Three new sub-commissioners have been appointed under the Land Act. Lord Hartington and Sir William Harcourt both declared, in speeches delivered during the week, that the Government was determined to act with patience as well as "unswerving firmness." Various stricter coercive measures have been suggested during the week, among them suspension of trial by jury, but the Government seems by no means prepared for such a step at present, and the principal Irish judges strongly deprecate it.

The extraordinary movement in Confederate bonds which has excited so much interest of late is said to have been partly due to the fact that the committee of Confederate bondholders in London made a statement that they intend to appeal, "steadily and perseveringly," to the public and Congress of the United States to bring about an opinion that the time has come when the restriction imposed by the Fourteenth Amendment of the Constitution should be removed so far as it prohibits the Southern States from effecting a just and equitable settlement of their debts. The committee repudiate the idea of embarking in litigation to recover Confederate property in Europe.

It is stated that at the meeting of the Grand Lodge of English Freemasons on the 7th of December, the Prince of Wales will move a vote of condolence with the family of the "late brother, James A. Garfield."

Another heavy gale prevailed throughout England and Ireland on Saturday and Sunday, doing heavy damage to property.

It is stated that Count Kálnoky, the newly-appointed Austrian Minister of Foreign Affairs, will, before his departure from St. Petersburg, arrange a meeting between the Emperor Francis Joseph and the Czar.

In his opening address to the Rumanian Parliament on Sunday, King Charles dwelt chiefly on the Danube question. He said that the destinies of Rumania have always been, and will remain, closely bound up with the free navigation of the Danube.

The Rumanian Government has renewed for a year the prohibition of the importation of pork from the United States and several European countries.

An extraordinary plot to kill the Czar is reported to have been discovered in Russia. The plan was to send up a balloon loaded with dynamite and explosive fire-balls, together with appliances to cause the balloon to fall within the palace yard at Gatchina, where the royal family are; the balloon was then to explode and set the palace on fire. In the confusion it was intended to "seize the Czar and his family."

The Greek Post-office in Constantinople has been forcibly closed in pursuance of an order of the Turkish Government. The Greeks submitted without resistance, declaring that they yielded to force.

Señor Calderon, formerly Provisional President of Peru, and his Minister of Foreign Affairs, have been arrested by the Chilians and taken to Santiago. Mr. Martinez, the Chilian Minister to this country, says that this step was taken because Calderon persisted in "exercising acts of jurisdiction which interfered with the occupying forces, in spite of the decree of the Commander of Forces." Pierola's forces are reported to be deserting him, and his complete downfall and banishment from the country are expected daily; meanwhile the settlement of the difficulties between Peru and Chili seems to be as far off as ever. It is reported that the Chilian Ambassadors, now in Lima, are considering the project of declaring the occupation of Peru by the Chilians for five years, at the expiration of which period elections are to be held for President and Congressmen.

General Prendergast y Gordon, the newly appointed Captain-General of Cuba, was sworn into office on Monday. He has issued a proclamation in which he says he will follow a broad and generous policy, which offers guarantees of respect and consideration to all opinions.

Advices from Rio Janeiro announce that the Brazilian elections have passed off quietly. The indications are that the final result will be 72 Liberals against 50 Conservatives. The present Ministers of Foreign Affairs and the Interior are among the defeated candidates. Both have resigned their portfolios.

Despatches from Japan state that the dispute between the Japanese and the foreigners in regard to the silk trade is still unsettled. The Japanese dealers have passed a resolution favoring the direct export of the silk now in Yokohama, and binding themselves not to dissolve their combination so long as the foreigners decline to conform to the rules of the guild. This "deadlock" in the silk trade is producing serious consequences in the silk-producing districts on account of the dearth of money.

Affairs in Corea are reported to have reached a crisis. There has been much agitation on the question of opening the country to foreign trade, and the King is now reported to be in favor of the movement.

The Liberal Conservative Convention of Canada met in Toronto on Wednesday last. Resolutions were adopted endorsing the national policy and the syndicate bargain, complimenting the ministry, and expressing gratification at Sir John McDonald's restoration to health. Sir Leonard Tilley and Sir John McDonald addressed the Convention in defence of the Government.

TUESDAY, November 29, 1881.

WHAT AILS THE HIGH-TARIFF MEN?

THE holding of a Protectionist Convention in New York just now seems at first sight a little incomprehensible. The accounts which we have had from protectionist sources, during the last seven years at least, of the working of the present tariff have apparently left nothing to be desired in the mode of raising revenue. It has hardly been possible during that period to open a protectionist paper without lighting on a column of glorification of the existing legislative arrangements for the promotion of American industry. The account given of them by the Tariff Convention which met in Chicago the other day really went to prove that any change in the system would be a positive misfortune. It has reduced and is rapidly paying off the national debt; it has restored and is maintaining specie payments; it supports the American workingman in unprecedented comfort; it cheapens all the commodities of life; it keeps up a favorable balance of trade, and, though last not least, puzzles and maddens the British freetrader and causes him to lose faith in his nostrums. If this be all true, the question naturally suggests itself, Why do the supporters of the system hold a Convention? What is there to discuss? Can anything which has worked so much good be improved upon? It would appear from the programme of the proceedings, however, that high-tariff happiness is only a surface happiness after all; that it is only to the freetraders that the protectionists wear a smiling front. Among themselves there is apparently still much gloom and discontent and apprehension, and the object of the Convention apparently is an interchange of opinions with a view to the alleviation of various miseries which even tariffs cannot cure.

It appears in the first place that the delegates will all demand more protection. The very first topic for discussion is the diminution of protection and the "injury done to home industry" by certain decisions of the Secretary of the Treasury. These decisions have in some cases lowered the duties actually levied. The opinion of the Convention doubtless will be that whenever the Secretary has decided on a rate of duty he should decide in favor of the higher rate. Then the Convention is to demand a "civilian commission," whatever that may mean, not simply "to thoroughly investigate and report on the progress, condition, and needs of American industries," and recommend whatever (be it lower or higher duties) their condition seems to permit or call for, but "to recommend such tariff legislation as will be protective in character, consistent in all parts, and adapted to the present condition of the business of the country." It will thus be seen that the Tariff Commission of which there is so much talk, must, if our protectionist friends have their way, be not by any means a judicial body, but a body whose conclusions are to be framed for it beforehand by interested parties. It might find, for instance, that the tariff in several cases worked direct injury to American industry, and that in other cases any duty was unnecessary or mischievous, but it would be nevertheless its duty to recommend more protection. In fact, it is difficult to see what the protectionists want a commission for, if it is only to be allowed to recommend what they already enjoy. We are therefore forced to suspect that they think a commission is inevitable, and are preparing to take the harm out of it by imposing conclusions on it before it makes any inquiry. They do not want it to contain any of those confounded fellows who are open to conviction. They like men who when they set out to search know what they are going to find.

The fourth topic of discussion, "the maintenance of a favorable balance of trade by the enlargement of our markets for American produce, and the promotion of our shipbuilding interests and foreign commerce," would be very mysterious to anybody who had not followed the workings of the protectionist mind during the last twenty years. The fact is that we have no foreign markets worth mention for any product of American industry which our tariff protects. That we do not suffer from this more seriously is due to the fact that we cover a wider area, and possess a greater variety of soil and climate and a larger and busier population with free trade than any other country in the world. We enjoy, in other words, very much the advantages which England, France, and Italy would enjoy if they formed a Zollverein, and abolished their custom-houses as against each other. It is due also to the fact that the market for our manufactures is increased every year by immigration. The effect of immigration on American industry is exactly similar to the opening every year of a small foreign state, containing half a million of inhabitants, to the unrestricted entrance of American goods.

These two facts, combined with the enormous extent of our national resources, enable us to support the protectionist experiment, including the loss of all foreign markets for manufactured articles, and of all share in the carrying trade, with apparent impunity. If our protectionist brethren were wise, they would be content with this and keep quiet about foreign trade and the shipping interest. In fact, on their own theory, we ought not to desire foreign markets. But being only men after all, they are ashamed of the fact that we have no access to foreign markets and have no ships. Their mode of dealing with this problem is in itself a curious phenomenon. The universal panacea of higher duties will not answer in this case. It is plain enough that we cannot make the foreigner buy more of our goods by putting heavier duties on his, and it is plain also that there is no way of making him transport either our or his goods in our bottoms but by offering him cheap freights; and in protectionist eyes cheapness is an abomination. There is, consequently, a diverting vagueness about the Convention's description of this difficulty. We warrant, however, that when the two orators who are to open the discussion on it—Messrs. John Roach and William Ward—come to be heard, the remedy will be found to consist in having the Government bribe shipowners to run two or three lines of steamships at a loss to some point at which American goods cannot be sold at a profit after paying freight. The simplicity of this plan is its only recommendation. It is worthy of the early ages of the race.

The refusal of the Convention to hear an "address of welcome" from Mayor Grace because he, the legal representative of a city which owes everything to the interchange of commodities with foreigners, wished to give his own views about the tariff, calls attention to what is the most unpleasant and dangerous side of the protectionist mind—its intolerance. There is nothing more instructive in political history than the way in which even here, in the home of free discussion, a school of economists and politicians has grown up which, with a certain amount of success, manages to treat all opponents of its views as public enemies if not foreign emissaries. The phenomenon was witnessed once before in the case of the slaveholders, and the cause is the same in both cases—the creation and maintenance, by special legislation, of a class of property-holders whose interests are separate from or opposed to those of their fellow-citizens. Such a class is everywhere unusually fierce and intolerant in politics. It has to be so because it has to persuade the community year after year that laws which put other people's money in its own pockets inure mainly to the benefit of those from whom the money is taken. No logicians were ever known to be patient or charitable when engaged in a job of this kind.

SPEAKERSHIP CONTESTS.

THE despatches from Washington give an amusing account of the considerations which are affecting Congressmen's minds with regard to the selection of a Speaker. The friends of Mr. Burrows, of Michigan, think that Michigan ought to have the place, because for twenty-five years she has given large Republican majorities, and "has never been suitably rewarded for her constancy," while Ohio, Indiana, and Illinois, all much less constant, have had political favors showered on them. A Speaker from New York is out of the question, of course, because "with the President and two members of the Cabinet, the Empire State ought to be content." Mr. Kasson is supported by Iowa, and has great strength because Iowa is the "banner" Republican State, and in the matter of constancy it will be difficult to decide between Iowa and Michigan. The Indiana Congressmen, however, treat the constancy argument with great contempt, and insist that it is not a steady Republican majority which entitles a State to the Speakership, but a majority in a really doubtful State in a Presidential year, and therefore claim the place for Mr. Orth, who, by holding Indiana firm in the Republican column last year, helped to save the country from the Democrats. This argument is reinforced by the fact that Indiana is not represented in the Cabinet, while New York, the other doubtful State, has two Cabinet positions. General Keifer is the Ohio candidate, and his claims are based on "the assassination of President Garfield and the transfer of the centre of political influence and power to New York." All the Western Republicans are agreed that the Speaker must be a Western man, but it is obviously difficult to foresee the result of a

contest decided by such considerations as those that we have mentioned. The claim of Ohio may perhaps be regarded as rather far-fetched and sentimental, but it would puzzle the most fair-minded man to say whether the Speakership ought to be given to a "constant" or to a "doubtful" State.

The "views" of the candidates with regard to the various subjects about which the party platforms make declarations of principles, and with which the committees appointed by the Speaker have to deal, do not seem to be at all known. Mr. Kasson's friends assert that his opinions with regard to the tariff have "undergone considerable modification recently," so that he is now a revenue reformer of a "mild type," while on his own behalf Mr. Kasson is understood to declare that "he is now, as he ever was, a believer in the protective principle." Some Western Republicans who are opposed to General Keifer, are dissatisfied with him because, as they say he has, at some time or other, expressed hostility to the Mississippi River; but there seems to be no certainty about this, and for our own part we are strongly inclined to believe that the General, if he were asked a plain up-and-down question, would be found to have no more hostility to the Mississippi than he has to the Equator, and to be no more opposed to internal improvements on which a majority of the party is united than Mr. Kasson is to revenue reform or the protective principle.

No reasons are given why Mr. Hiscock, the New York candidate, should be selected, it being hopeless in the present condition of politics to urge any claims for this State; but a strong reason has been found by the supporters of the other candidates against him, and that is, that he cannot be trusted because "he has on several occasions been seen in pleasant conversation with that prominent Democratic statesman, ex-Speaker Randall"—experience having shown that with a New York politician such interviews as these are not infrequently the prelude to the most base and loathsome forms of treachery.

The usual newspaper view of the matter is that considerations such as these ought not to influence the result at all; that, in fact, they are peculiarly out of place in a contest for the Speakership; that any one who is put forward as the favorite son of a particular State will necessarily feel, if elected, that he must do what he can, in his appointment of committees and in his rulings, to advance the interests of the State he represents; that what is needed in a Speaker is solid judgment, breadth of information, thorough impartiality, and undoubted integrity. The organization of the committees determines to a very great extent the character of legislation, and a Speaker ought consequently to be chosen who will not fritter away the future of the party in any effort for personal popularity and aggrandizement, in rewarding friends, punishing foes, or promoting factions. This view of the subject is evidently not shared by anybody in Washington. The most noticeable thing about the discussion of the candidates' claims is, that it does not include any consideration whatever of their respective fitness for the office. It cannot be, in the nature of things, that Mr. Kasson, General Keifer, Mr. Hiscock, and the other candidates are all equally competent to discharge the duties of Speaker; and the only conclusion to which we can come from the total silence maintained about this is, that fitness is no longer regarded at Washington as a matter of any consequence in the contest. This is not owing, as we have said, to the unimportance of the office, but to the fact that as politics are now managed, "fitness" is such a confusing element that no man can see how things would come out if much attention were paid to it. If a Speaker is selected because he is in sympathy with the Administration, he will fix the committees and distribute his patronage so as to help the Administration's friends and punish its enemies; if, on the other hand, he is put forward as a favorite son of a particular State, a friend of the Mississippi River, or of increasing the duty on wool or iron, the friends of other rivers and the sons of other States and the advocates of a higher tax on whiskey know just where to find him, and how to make their arrangements in advance of the election so that, by means of that spirit of compromise which is the life and soul of good politics; their interests shall not be absolutely sacrificed. To settle the contest by considerations of fitness, or, in other words, experience, integrity, judgment, and impartiality, would introduce the most frightful confusion into the whole matter; for no politician cantell in advance to what conclusions with regard to conflicting rivers, or taxes, or the claims of constant or doubtful States, such a qualification would lead a Speaker.

The contest over the Speakership is becoming with every new Congress in many respects like the contest over the Presidency in the nominating convention. We find the same arguments as to the "claims" of various States, based on their constant or fluctuating election returns; the same cheerful readiness to subordinate opinions, so far as possible, to interests; the same feeling that the East is too greedy, and the West is entitled to the place, or *vice versa*. In the Speakership contest the disappearance of fitness as a test is perhaps more marked; on the other hand, "dark-horse" candidates, kept in reserve to be put in the running when the "break" comes, are not yet a feature of Speakership contests. For this a huge and tumultuous body like a national convention is probably necessary.

FRENCH FINANCE.

With the advent to power of a new Ministry in France it is probable that certain economic questions which were suffered to remain untouched by the late Ministry will come before the public for settlement. In nothing were the weakness and vacillating policy of the late Ministry more clearly shown than in their manner of treating matters of commerce and finance. Distrusting their own strength, they refused to notice many pressing matters, or treated them in such a manner as to render any hope of a final and satisfactory settlement fruitless.

First in importance, so far as the foreign commerce of France is concerned, are the commercial treaties, over which there has been so much discussion of late. Although it is announced that the treaty with Belgium has been signed, and the final proposals of a treaty have been submitted to Italy, this is not a very brilliant result for the late Ministry to boast of. It would seem to be an easy matter for two nations situated as are France and Italy to come to a speedy agreement on a commercial treaty; for as both are under a protectionist or at least a high, tariff, it is only necessary to decide upon the duties which are to be mutually reduced. But in treating with England the case is very different, for England has no general tariff, or any duties that could be reduced to any extent in return for a like concession on the part of France. Moreover, of late a strong protectionist party has gained the ascendancy in France, and forced the late Ministry to enter into the negotiations with England with such proposals as forbade any agreement between the two nations. This was accomplished only by a bargain between the protectionist manufacturers and the agriculturists, and this bargain has been broken, for little or none of the promised protection was given to agriculture. Still, this alliance between the two interests lasted long enough to make the Ministry consent to the protectionist programme, and all attempts to frame a treaty failed. But as Gambetta assumes power with a strong majority behind him, he may again offer to resume negotiations with England, and thus remedy to some extent the mistakes of his predecessor. In his speech before the Senate he is very vague in this matter; he merely engages to fix by treaties an economic régime of the various industries.

The most important question relating to finance, and one that has been allowed to pass almost unnoticed for six years, is that of the conversion of the public funds bearing five per cent. into funds bearing a lower rate of interest. While England and the United States have successfully accomplished at different times vast refunding operations, with little or no disturbance to trade, this method of reducing the public burdens by reducing the rate of interest on public loans has never been extensively practised in France, because the political situation has been such as to render any proposal to refund dangerous to the tenure of office of the Ministry. For in no country is the national debt so completely distributed among the population as is that of France. In 1875 the public fundholders were nearly equal in number to the freeholders of the soil (about four and one-half millions), and any attempt to reduce the income of so large a proportion of the total population is regarded as fatal to the Ministry proposing the reduction. But the charge on the national debt is very heavy, amounting to about twenty-one francs per head of population, so that, if this burden could be reduced, the fundholder would be benefited; for though his nominal income would be reduced, his taxes would also be less. The portion of the debt which bears five per cent. interest amounted in 1875 to 5,743,000,000 francs, and the annual charge on this amount to 343,000,000 francs; so that the reduction of even one per cent. in the interest would form

quite an item. This stock was quoted in the first week in November at 116; and as the three per cents were then selling at about 84, the whole amount of five per cents could doubtless easily be refunded at four per cent., and the new stock issued at par. It is true that Gambetta, in a speech at Romans in 1878, expressed a wish that this question should never be brought forward; but his position at that time was very different from what it is now, and his objection to refunding was based rather upon political than upon economic reasons. Had he appointed Léon Say Minister of Finance—and he was strongly urged to do so—the conversion would have been at once effected. The present financial situation of France is favorable to this conversion, although the political situation is not as favorable, owing to the uncertainty of the result of the Tunisian expedition. Yet if Italy, with the same cloud over her, can attempt the far more difficult operation of suppressing a paper currency, why could not France accomplish the easier task of refunding a part of her debt? The city of Marseilles, a few years since, succeeded in reducing the rate of interest on her debt from five and four and one-half per cent. to four per cent., and certainly the credit of France is as high as that of Marseilles.

These are the two most important questions relating to the commerce and finance of France to be settled by the new Ministry. There are also some minor ones, such as the reduction of burdens on agriculture; the suppression of the petty and harassing imposts on commodities which hamper the internal commerce of France without producing much revenue to the treasuries, and a change in the relations now existing between the national Treasury and the communes, by which the system of subventions will be abolished. The settlement of these will be watched with interest.

THE LICK OBSERVATORY.

In December, 1874, Mr. James Lick determined to erect "the most powerful telescope in the world," somewhere within the boundaries of California, his adopted State. Various sites were proposed and considered, the first being Observatory Point on Lake Tahoe, which was soon abandoned on account of the severity of the winters at this place, and especially on account of the great snowfall. Mr. Lick's original idea was somewhat crude and unformed, but it took shape after consultation by letter and otherwise with various men of science in the East and elsewhere, and also with gentlemen of scientific tastes in California. Monte Diablo (3,856 feet high), Mount Helena (4,343 feet high), and other points were successively proposed and, after examination, rejected. Finally, Mr. Lick sent Captain Fraser, his man of business, to examine Mount Hamilton (4,440 feet), an easily accessible peak some thirteen miles east of San José, in Santa Clara county. The first examination was made by Captain Fraser, in August, 1875.

In most respects this site was found to be satisfactory, but the chief objections to it were important if not vital. The cost of constructing a road to the summit would certainly be very great, and the summit itself was a sharp point of very hard trap rock. To make a level space here for the reception of the necessary buildings would be a serious matter. Finally, no water was known anywhere near the summit. The last objection was disposed of by the discovery of two springs, only 4,300 feet distant from the summit and 300 feet below it. Mr. Lick then announced that if Santa Clara county would build a suitable road connecting San José with the top of the mountain, he would establish and suitably endow an observatory on Mount Hamilton. After various changes in his plans Mr. Lick made a deed of trust (dated September 21, 1875), which gave a very large amount of real and personal property to five trustees to be by them expended for various purposes. The observatory was provided for as follows: The trustees were authorized to expend the sum of $700,000 for the purchase of the necessary land and for putting up on that land "a powerful telescope, superior to and more powerful than any telescope ever yet made," with the necessary machinery, etc., "and also a suitable observatory connected therewith." As soon as these objects are satisfactorily accomplished, the observatory is to be turned over to the Regents of the University of California, to become a department of the University, and any surplus left over after paying for the land and observatory is to be invested in safe bonds. The income from these bonds is to be devoted to "the maintenance of the said telescope and of the observatory connected therewith, and shall be made useful in promoting science."

A grant of land was obtained from the United States; the proposition of Mr. Lick to Santa Clara county was accepted, and the road to the top of Mount Hamilton was built during 1876. It was formally accepted by the trustees in January, 1877. It is now maintained by Santa Clara county as a county road, and it is quite likely that it will soon be extended by Alameda county over the range into the San Joaquin valley. Probably no more magnificent mountain road exists in the United States, when one considers all the circumstances of fine surrounding scenery, excellent road-bed, and commanding views. Some idea of the engineering difficulties overcome can be had from the cost of constructing this highway twenty-six miles into the heart of the mountains, and with a rise of 4,000 feet in twenty-two miles. Such a project would appall the average county surveyor of New England, but it was here accomplished at the large cost of $78,000.

The maximum grade is 6 feet 6 inches in 100 feet, or about 343 feet in the mile. Most of the road, however, is materially less steep than this. The first four miles is a fine level avenue, laid out in a perfectly straight line in the Santa Clara valley. The ascent of the foothills is then commenced, and the road begins a series of turnings and twistings which are of course necessary to keep the gradient low. Toward the end of the route the road winds round and round the mountain itself and overlooks one of the most picturesque of scenes: the valley of Santa Clara and the coast range to the west, a bit of the Pacific to the southwest, the Sierra Nevadas, with countless ranges between, to the southeast, the San Joaquin valley and the Sierras beyond to the east, while to the north on clear days you plainly see Mount Shasta (14,000 feet), 175 miles away. The bay of San Francisco lies open before you, like a child's dissecting map, and at the end of it Tamalpais, the mountain near the entrance to the Golden Gate.

Mount Hamilton has, properly speaking, three summits. The east peak is 4,440 feet, the middle peak is 4,350 feet, and the third, the Observatory peak (originally 4,256 feet), has been cut down to a level surface just large enough to contain the necessary buildings for the instruments. The dwelling-house and workshops are on a narrow saddle some fifty feet below the summit. To gain the level surface some twenty-nine feet of rock has been removed from the peak; in all about 40,000 tons. A level site is thus provided, and this is perfectly accessible from San José. With a light wagon one may trot the horses all the way. The springs have also been connected with "the hill," as it is called by the inhabitants, by a good road along which a water pipe is laid. These springs yield 850 gallons per day in the dryest time, and in the wet season as much as 5,000 gallons per day. Thus a very serious problem is solved.

The decision of the general plans for the Observatory has fallen largely to the President of the Lick Trustees, Captain R. S. Floyd. He has given to these questions an amount of time which few persons could possibly bestow on a matter outside of ordinary professional life. Since 1876 he has personally visited most of the observatories of Europe and America and has corresponded with astronomers all over the world. In 1879 he visited Washington, and together with Professors Newcomb and Holden, of the Naval Observatory, he prepared a series of drawings from which the Observatory was to be built, and ordered the first of the instruments. The general plan of the Observatory is to give the place of honor to the large dome (some seventy-five feet in diameter). This is to contain a refracting telescope by Alvan Clark & Sons, of Cambridgeport, who have made not only the largest but the best telescopes in the world. Their first telescopes were six inches in aperture and of exquisite definition. Without losing in precision, they have successively made object glasses of 8¼, 9⅛, 12, 15½, 18½, 23, and 26 inches. They are now engaged on an objective of 30 inches for the Russian Government, and will soon commence the Lick telescope of 36 inches aperture, for which they have served so magnificent an apprenticeship. This is to occupy the whole of the south end of the plateau of the summit. At the northwest corner stands a dome (completed in November, 1881) which contains a 12-inch telescope by Alvan Clark, one of his very finest. Connecting the two domes is to be a one-story building containing a clock room, workshops, a library, offices, and bedrooms for observers. A transit house of iron (completed in 1881) stands a few feet east of the smaller dome, and just south of this is the photo-heliograph, with its house. A few feet east of this the six-inch meridian circle (by Repsold of Hamburg) is to stand, which, with the four-inch transit (by Fauth of Washington), completes the list of meridian instruments. A four-inch comet-seeker, by Clark, occupies a small dome. The main building will be built of brick. The bricks of clay, found close to the Observatory, are made under a contract which saves the Observatory some fifty per cent. of the usual cost. About 2,000,000 brick are now made and ready to deliver, and these will just about suffice for the constructions agreed upon.

It will be seen that an observing station of importance is already established on the mountain, containing an equipment of which many European observatories would be proud. It may be said that the whole of the fund expended to date is less than the cost of the road to the summit, and this includes all expenses. This equipment has recently been utilized in the observation of the transit of Mercury on November 7, 1881, by Professor Holden and Mr. Burnham, who were invited by the trustees to set up their first instruments. In 1879 Mr. Burnham spent three of the summer months on the mountain, and used his six-inch telescope in regular observations, the object being to compare the conditions of vision at this high altitude with those at lower levels. His conclusions were extremely favorable to the Mount Hamilton site, and from his report there is little doubt that during the summer months this site is more favorable than that of any observatory now established. During the winter, storms prevail, but the

snow is not very deep, and does not lie long, and the temperature is not very low. When it is clear, in the rainy season, it is perfectly so, and the vision compares favorably with the average conditions at Eastern observatories. It is obvious that if the management of the Observatory affairs remains in the same able control, we shall have in a few years one of the most admirably equipped observatories in the world, on a site far superior to any; and without being too sanguine, it will be safe to expect much from such an institution in proper hands.

Correspondence.

MR. ADIN THAYER ON THE CAUCUS.

TO THE EDITOR OF THE NATION:

SIR: Your recent and somewhat lengthy article criticising my address at the Massachusetts Club seems to call for a few words in reply, although it is exceedingly difficult to defend, in your columns, a paper which, in all human probability, not one in a hundred of your readers will ever have an opportunity to see. Had you seen fit to publish the address, I should have been quite content to leave the whole matter to the candid consideration of your readers without a word of comment. As it is, they can hardly fail to get an entirely erroneous impression of its scope and purpose—not from anything which you quote, but from the meaning which you attempt to give to parts which you do not quote. For instance, you say, "From the account he gives of Sam Adams one would suppose that the union of liberty with law was never thought of until his time." Pray where do you find anything in my address that warrants this statement? I have never said or believed anything of the kind. The idea of liberty regulated by law is as old as civilized society, and nothing could have been further from my purpose than to claim for Sam Adams or anybody else the honor of its discovery. Let me quote what I said upon this subject:

"Sam Adams was a thinker. He had mastered the idea of a republican form of government, and it is doubtful if any man ever had a clearer conception of liberty, regulated by law, than he. He was also a statesman and a politician. The terms to me are synonymous. Upon him, more than upon any other man, fell the duty of organizing resistance to British aggression; and, to accomplish this end, he used all the appliances which were suggested by his powerful and trained intellect. The press and the town meeting he found established, and he used them. But finding them insufficient, he supplemented them with an institution which the enemies of liberty, probably in derision, called 'a caucus.'"

Will any intelligent student of American history say that I have claimed too much for Sam Adams?

This is not the only instance in which you have tortured my words into a meaning contrary to their fair and legitimate import; but let the others pass.

It is no very serious thing for an individual to be misrepresented in the columns of a newspaper. That a considerable number of people are not satisfied with the caucus is to my mind no valid objection to the system. No human institution, however beneficent it may be, satisfies everybody. Even universal suffrage has hosts of opponents in this country to-day. You say that "to the changed condition of society in many parts of the country, and particularly the great cities, the caucus is entirely unsuited." You do not state how or why it is unsuited. I therefore have simply to place my opinion against yours, and assert that under our present form of government it is suited to substantially every locality.

You say that "under his definition of the right of voting he would not be permitted to take part in any Republican caucus in the city of New York." What of that? I have not defended any clique or cabal which usurps the power of the people and assumes the honored name of caucus. Such an organization is no more entitled to the name of a caucus than are the followers of Joe Smith and Brigham Young to the name of a Christian church. I spoke in defence of the caucus as it ought to be, as it was in the time of Sam Adams, and as it is to-day throughout Massachusetts, and I denounced its perversion as fraught with danger to the republic.

From this line of argument I do not propose to withdraw for the sake of discussing side issues. You say that "the best system of party nominations is that in which it is easiest for the most intelligent and the laziest and most indifferent to take part." So far as this idea applies to "the laziest and most indifferent," I think you may fairly consider that it is an entirely new discovery, and nobody will be likely to dispute your claim to priority of invention. What your precise system may be you do not state. When you do, it will be quite time to criticise; but in the meantime I must be permitted to say that I have no faith in any royal road to good government any more than I have in a royal road to learning, virtue, or religion. The problem of adapting political duties to the requirements of absolute laziness has never yet been solved, nor am I aware that its solution has ever before been seriously attempted. Should you, however, succeed, you will confer lasting benefit upon the human race, and greatly relieve the anxiety of those of us who believe that political inertness is the chief stumbling-block in the road to the permanent success of free institutions.

ADIN THAYER.

WORCESTER, November 14.

[Mr. Thayer published his address in a pamphlet and sent it to this journal, presumably to be discussed as well as read. He can hardly have expected that if we discussed it we should publish it—any such rule would of course make any notice of a book or pamphlet an impossibility. It would fill several pages of the *Nation*. We will add that if we had published it in full, our comments on it would have been much more effective. For instance, more space for quotations would justify our assertion as to the rôle Mr. Thayer assigns to Sam Adams. The proper answer to the charge that we have in other cases tortured his words into a meaning contrary to their fair and legitimate import is, as it is not supported by proof or illustration, a simple denial. As Mr. Thayer now says that he defended "the caucus as it ought to be, as it was in the time of Sam Adams, and as it is to-day throughout Massachusetts," we really have no further controversy with him. But we must in self-justification add that, whatever his design may have been in writing his pamphlet, what he really did defend was the caucus as it is, and not in Massachusetts only but everywhere, as the following curious passage alone abundantly proves. If his plan had been more limited, he would doubtless have treated people who find fault with the caucus—many of whom are as honest, intelligent, and patriotic as he is—with more respect, or rather with less contempt, for not agreeing with him. It will be seen that he claims without qualification success for the caucus everywhere but in the slave States, and castigates the "doctrinaires" for not being satisfied with what was good enough for Sam Adams and his contemporaries. With a few slight changes, this argument might be used against railroads, and steamboats, and stoves in churches.

"Adams and his compeers saw that British tyranny could best be resisted, and republican institutions organized, by submitting all questions to the people in their primary capacity, where every citizen could discuss and vote on a perfect equality with his fellows. The experiment was tried, and has proved an abundant success, so that it has been ever since an established institution throughout the country, save only in localities controlled by the slave oligarchy, where freedom of speech and of the press have always been practically denied; and it would seem that a discreet distrust of their own wisdom might lead some of our doctrinaires to cease from their flippant denunciations of an institution which received the approval of Hancock and Otis and Warren and the Adamses, and which more than a century's experience has justified and approved. It is a peculiarly American institution; for we find nothing really analogous to the orderly, deliberative American caucus in any of the institutions of the Old World. It is difficult to see what objection can really be made to the caucus in the abstract, the peaceable assembling of citizens together to deliberate upon public affairs, and to place in nomination the candidates who are to be supported at the coming election. The objections, as expressed by orator and journalist in their furious denunciation of caucus tyranny and political wire-pulling, may be all formulated in the single statement that corrupt and time-serving men attend and control caucuses. Undoubtedly, but they also vote and control elections when they are in the majority. The objection proves too much, if it proves anything, for it strikes at the very foundation of free government—universal suffrage. If these men are to vote and participate in elections, why not recognize the fact and provide for it? We not only meet the vicious and depraved at the caucus and the polls, but we meet them in all the walks of life."

—ED. NATION.]

THE NEW YORK CITY YALE ALUMNI JUBILEE.

TO THE EDITOR OF THE NATION:

SIR: What the Yale Alumni in the city of New York do, or do not do, is a matter of interest to a limited, perhaps a small, portion of your readers; yet Yale graduates are numerous throughout the country, and critics, hostile to university education, are more numerous. The transactions, then, of the most conspicuous and largely attended reunion of Yale Alumni in our colossal city are not without consequence, since they indicate with more or less exactness the result of university education at a time when the educated intellect unbends itself, when Socrates and Alcibiades hob-nob together, and pleasure goes hand in hand with philosophy to the supper-table.

When ordinary men meet for convivial purposes, uncheered and unchecked by feminine presence, there is always an outflow of vulgarity, only partially redeemed by that Rabelaisian humor which is the muck out of which all gross stories grow, and which, however much we may deplore its existence, is an admitted and permanent fact—a sort of "covenant running with the land" out of which male human beings are made. A natural supposition would be that a university education, especially the education imparted at such a university as Yale, would tend to refine away such vulgarity to a vanishing point; to cleanse a Rabelais of filth while leaving to him the full exercise of his native humor, and in fact developing this humor by fruitful methods of culture. Two hundred classically, mathematically, philosophically educated gentlemen, alumni of one seat of learning, devote an evening to intellectual recreation in the society of each other, and what is the result? A song is sung, as a preliminary. This song of four verses is written in a halting style, and fails to furnish correct scansion. Charity

compels us to believe that it was intended to be incorrect as to rhythm, and rhyme also; but although undeniably bad, it was not bad enough to be good. It was admirably sung, however; and a good-natured audience prepared themselves to enjoy a poem. In order to enjoy a poem, an educated listener requires that the poem shall be constructed in accordance with the rules of poetic art, and that it shall be vitally informed with the poetic principle. Such construction is simple, and demands little more than educated industry; the life-giving interjection of the poetic principle is a matter of genius, and cannot be manipulated to order. The prevalent conclusion, after the alleged poem had been read, was that the audience had been cheated of their time and attention. Yet, but for the *doubles ententes*, the general dulness of the piece would have been pardoned, since the performer was evidently doing the best he could; and this sort of energy only becomes blameworthy when he is doing his best in an unworthy direction.

A "missionary address" followed, as to the bad taste of which no doubt was expressed. No reason exists why a collection of scholars should at any time set up one of their number to travesty a sermon, or to make a parody of Scripture, or to ridicule organized schemes of doing good; but if such a reason should exist, it is the *minimum* of fair treatment of the travestied sermon, the parodied Scripture, or the organized scheme that the business should be done on artistic principles—neatly, skilfully, with keen wit, with a humor that shall produce a smile upon the faces of listeners while the speaker wears the mask of gravity. None of these conditions were observed during the delivery of the "missionary address" at the Yale Jubilee. When the orator, liberally educated at great expense, displayed his culture by saying: "This is a big scheme; we'll let you all in on the ground-floor; Jay and Cyrus are both in it, and it's bound to go through; yes, there's lots of money in it," his own countenance was wreathed with smiles, and he chuckled audibly; but the audience despaired. With this orator *doubles ententes* went out and broad vulgarity came in without mask or clothing. A map of Africa, with a railroad from end to end, garnished with caricatures, is a puerile conception to depict on muslin wherewith to interest an intellectual and educated audience. At the highest, in lecturing before such a show, one could not rise above Artemus Ward; while the chances are, as it proved in this case, that one will fall below a Bowery variety actor.

With the "Review of the Progress of the University" came another deluge of obscene allusion, to which the audience had now grown callous; and it is a satire upon Yale that the only clean effort of the evening, aside from the singing, was the final address of a graduate dressed to imitate Prof. Agassiz of Harvard. This was delivered without notes, and was incisive and clever.

A jubilee performance such as this should never be repeated. I apologize for so long a letter on so slender a topic.

A YALE GRADUATE.

NEW YORK, Nov. 22, 1881.

TREE CULTURE.

TO THE EDITOR OF THE NATION:

SIR: A recent communication in your columns on the subject of "Schools of Forestry" contains some wholesome truths which it would be well for legislators to bear in mind before devoting public money to uses which may prove unavailing in effecting the desired object. The fate of most of the agricultural schools which have been attempted in this country should serve as a warning against proceeding rashly in the effort to give instruction in a single branch of culture, and especially against adopting such systems as are demanded and have proved successful under the entirely different conditions which exist in Europe.

Nevertheless, the fact remains that our forests have been and are being stripped from the face of the earth at a rate which threatens far greater evils than the mere loss of the timber, and the prevailing ignorance of forest preservation and culture is so great and so universal that it is very difficult to discuss the subject in terms that will convey any clear ideas to the average mind. I have heard intelligent men, whose pursuits are such as would seem necessarily to have made them familiar with the growth of wood, deride the assertion that our timber supply was being diminished, and assert that the young wood which was everywhere springing up was more than sufficient to supply its place. To hear this said by a man whose life had been passed in other pursuits, and who only formed his opinions from what he saw in travelling about the country, would be no cause for surprise; but I have heard it from professed agriculturists and from men actually engaged in the business of lumbering—men who one would suppose could not help seeing and knowing that of all the vast extent of wood which may be seen on almost any journey, not one tree in ten thousand can ever attain the dignity of timber, while the great mass will run up into mere hoop-poles, serving only for fuel or fencing-stuff. And yet these same forests, by proper thinning and culture, might be preserved, and a very large amount of timber thus secured for future use, while the annual thinnings in many instances could be made a source of revenue.

There is scarcely an acre of woodland even in the vicinity of great cities which shows the least evidence of knowledge on the part of its proprietor that its value might be enormously increased by such care and culture as would develop either timber or ornamental forest, which would add very greatly to its attractions as a site for suburban residences. And when the work of thinning is begun, as in the case of such a tract having been selected as a site for a rural home, the manner of its performance bears further evidence of utter ignorance of the primary necessities of forest culture. The (so-called) underbrush is first carefully grubbed out, as well on the edges as in the interior of the wood, so that the winds have full sweep over the surface of the ground; the trees are thinned without regard to any object but the preservation of the best specimens; and finally the leaves are carefully raked up and burned or carried to the compost heap. The result is that the myriads of fine fibrous roots which every tree had sent out, and which had formed a perfect matting, permeating the leaf mould near the surface, which had always been kept moist by the mulching of fallen leaves and the shade of the trees, being now exposed to the drying influence of sun and winds, are sure to perish; and the wood, which had previously presented as a whole the beauty of a living mass of luxuriant foliage, is converted into an assemblage of gaunt and sickly-looking trees, devoid alike of symmetry and grace.

I mention the above as an illustration, the truth of which must be obvious to most people, of the prevailing ignorance of the requirements of tree-culture; and of the need, not of schools of forestry, but rather of illustrative examples, within easy access of cities, colleges, and schools, not only of arboretums in which specimens of all desirable varieties of trees and their best mode of culture may be exhibited, but of tracts of native forest in which the best modes of treatment may be followed to ensure the finest development of ornamental or timber trees. These examples would result in a few years in such a popular recognition of the importance of the work, and the possible attainment of increased wealth and beauty by the judicious management of the native forests wherever they still exist, as would form the foundation of a future demand for schools of forestry that might become of essential value.

It will be seen that my ideas are in the main the same as those of the writer to whose communication I have referred. I agree with him that "experimental forests" should constitute the first step we should take toward the attainment of what we want; but an experience of thirty years as a landscape gardener has convinced me, first, that in every section of our country there are vast tracts of woodland now standing which, if left to themselves, will never attain a greater dignity than that of fire-wood, but which, by proper care and culture, might be made to attain such value as would in the aggregate constitute a vast source of national wealth; and, second, that the ignorance of forest culture is so universal that there is no just appreciation of this truth; and even the men who so wisely urge the planting of new forests, and bewail the destruction which is going on, have failed to perceive the means within our reach of vastly increasing the value of those which still remain.

The subject is one I have so much at heart that I should be glad to enlarge upon it if it were consistent with the objects of your paper or the interest of the majority of its readers.

H. W. S. CLEVELAND.

CHICAGO, Nov. 25, 1881.

GUITEAU'S INSANITY.

TO THE EDITOR OF THE NATION:

SIR: When Hödel and Nobiling shot at the German Kaiser, I was residing in Berlin, and finding nothing in my own daily paper about the prisoners, inquired at news-stands and then of several German friends, until at length I came to understand that there seemed to them a shade of ill-breeding, if not of disloyalty, in the fact of my curiosity. I saw at length in my paper an announcement of two lines for each, that after due trial they had been beheaded for treason, in the presence of a few officials and physicians. Both these men, so far as I could learn, were fanatics of excitable temper, aggravated by bitter party feeling, and the sentiment seemed strong and universal that public duty required, and public safety demanded, that not the least notoriety should be attained by these wretches.

Now, as the other extreme, the trial of an assassin who not only killed but tortured our Chief Magistrate, fills several columns each of the morning and evening editions of my daily paper. Nothing is less insane in the psychiatric sense than the passion for fame. The insane often think they have obtained, but never in my reading or observation do they crave it. It is almost a part of the young American temperament to long to do something exceptional and great, and often without discriminating between fame and notoriety. Guiteau is already a hero of this sentiment. He devours the printed reports of his trial, and then devotes himself to new sallies, speeches, declarations, etc., for the next day's record, often amid roars of laughter, while the Judge himself, we are told, sometimes smiles. However indifferent he may appear to the gallows, the prisoner has a very sane fear of assassination, if we may judge by his manifestoes.

As to Guiteau's "Deity business," I know several very practical people who piously believe

their every word and act is immediately directed by God. They belong to a larger sect of essentially the same creed. The irresponsible type of inspirationism appears almost only when attended by auditory hallucinations, due to disordered subjective sensations, and interpreted by the patient as a voice of Deity or other commanding his deed. Some admit only this type as irresponsible, in which the subject often resists for a long time and often appeals to his friends for help, and perhaps even demands to be confined before the dangerous impulse has entirely mastered him.

Again, sanity shades off into its opposite by many insensible gradations. Instead of being a fixed and definite state, we are almost all of us insane to a degree, just as we are not in absolutely perfect health; and the point is where responsibility ceases. Now no one doubts that there are many Guiteaus at large. This one dreads death, as his proclamations and his excitability show, while he sees himself proved insane with great complacency. Would not the other Guiteaus be wholesomely affected by seeing him hung, rather than made a notoriety or hero of? Stern discipline is often salutary in an asylum, and it has been well said that nothing would cure hysteria like flogging or executing a few of its worst cases.

The fact is that as surgery is the very best department in medical science in this country, alienism is the very worst; and as sympathy, such as was illustrated during President Garfield's illness, is the best side of our national life, so the administration of justice is that in which republics notoriously fail. So far the trial has been a very broad afterpiece to the noble spectacle of our national grief, and humiliating enough to those who chance to have a personal interest in the comments of candid and critical European friends. The facts that we have no such scientific care for the insane in our hospitals or in private practice as is found in Europe, and especially in Germany, since the great revival of this department some two decades ago; that even post-mortem studies of the brain or spinal cord are so rare, or so uncritical; that many of our medical schools have yet no special chairs of insanity; that most of the best books in this department in other languages remain untranslated, etc.—these facts do not indicate that the medico-psychological principles that should determine this case will be likely to be impressed very vividly upon the minds of the twelve "average men" in the jury-box.

It is clearly for Stalwart interests that Guiteau should be proved insane; but it is a great mistake to suppose that it will "look better abroad" to have this verdict, and it is worst of all for political interests to be in the least heard or felt in the matter. Since this trial began I, for one, have first learned what a sense of national shame means. Very respectfully, X.

Boston, November 28.

Notes.

Houghton, Mifflin & Co. will bring out a new and enlarged edition of Bret Harte's works in five uniform volumes. 'Noah Webster' will form the second of this firm's series of "American Men of Letters," and will contain a portrait on steel from an old oil painting by James Herring.——'Authors and Authorship,' by William Shepard, in the press of G. P. Putnam's Sons, treats of the advantages and discouragements of the literary profession, with some statistics of success and failure in it.——S. C. Griggs & Co., Chicago, announce as in preparation a joint translation, by Professor R. B. Anderson and the author, of Frederic Winkel Horn's 'History of the Literature of the Scandinavian North,' already reviewed in the original in the *Nation;* a new and revised edition of Professor Anderson's 'Viking Tales of the North'; and 'The League of the Iroquois,' a poem, by Benjamin Hathaway, intended to embody the traditions of the Five Nations.——An elaborate undertaking in color-printing is Tennyson's 'Lady of Shalott,' decorated by Howard Pyle, and to be published by Dodd, Mead & Co.——Harper & Brothers will be the American publishers of John Richard Greene's 'The Making of England' and Sarah Brook's 'French History for English Children.'——I. K. Funk & Co. will have ready this month their 'Cyclopædia of Practical Quotations,' by J. K. Hoyt and Anna L. Ward. Stocks must not be inferred from this rather singular title, but "seed-thoughts of inestimable value."——The next number of *Liberty*, the Boston fortnightly socialistic publication, will contain the first likeness of Michael Bakunin ever published in America.——The first and second reports of the Boston Record Commissioners are nearly reprinted, in answer to the unexpected demand for them, and No. 7 (Boston, 1660–1700) is completed except the index.——Mayor Courtenay's annual review of "Education in Charleston, S. C.," which attracted wide attention at the time of its delivery, has been printed in pamphlet form, by unanimous vote of the City Council, with the sub-title, "The Disabilities of the Unaided South in Public School Facilities." It considers the three questions: "Why the National Government should help us," "How it has the power to help us," and "What means it can apply to help us."——The proceedings of the meeting held by the Trustees, Faculty, and other members of the Johns Hopkins University in commemoration of the late Sidney Lanier have also been published as a pamphlet.——Professor Fowler, of Oxford, England, whose volume on Locke has been reviewed in the *Nation*, has lately edited his 'Conduct of the Understanding,' with notes and introduction, in a handy little volume of 136 pages, in the Clarendon Press Series (Macmillan). The work itself is well adapted, as Hallam says, to boys just beginning to reason; but to whom Professor Fowler's notes are adapted it would be hard to tell. He informs us that Lord Verulam means Bacon; that mizmaze is a maze or labyrinth; and that orthodoxy is "opposed to the tenets of the heretics"; and for the rest refers the reader repeatedly to the Bible, Locke's 'Treatise,' and his own works, and cites many parallel passages from Bacon, on whom he was preparing a volume—all in the dryest and most scholastic of ways. Thirty pages are filled with this philosophic verbiage.——Very late indeed is the *Almanach des Spectacles* for 1880. Ten months is a little larger margin than even the most elaborate editor has a right to ask, and there is nothing in this volume which should have delayed it after February. The etched portrait (this year by M. Gaucherel) represents M. Coquelin *cadet* in "Ami Fritz." The elder and greater M. Coquelin has just published 'Un Poète du Foyer—Eugène Manuel' (Paris: Ollendorff; New York: F. W. Christern), which, like its predecessors in the same dainty form, "L'Art et le Comédien" and "Molière et le Misanthrope," was originally delivered as a lecture. It is a sympathetic study of a poet little known on this side of the Atlantic. Incidentally, it is remarkable as containing a sketch of M. Gambetta, whose intimate friend the actor-author is.——The November number of the *Moliériste* has a colored engraving of the chair which Molière used in the last act of the "Malade Imaginaire," and which is still used by the Comédie-Française every time that play is acted. It was at the third performance of the "Malade Imaginaire," and while he was sitting in this very chair, that the great dramatist and actor was seized by the fatal attack which carried him off before morning.——The second and third volumes of the 8vo edition of M. Alphonse Daudet's complete works will appear before the new year, and will contain 'Jack' and 'Robert Helmont.' Besides the two illustrations in each volume, each story will be preceded by an account of its origin from the author's own pen.——The bibliography given this year with the report of the Royal Library at Stockholm is Part 1 (1483–1658) of "Sweden's Relations with Foreign Powers." It fills 171 pages, is arranged chronologically, and includes pamphlets. Everything is fully described.

—The December *Scribner* is fairly to be denominated a memorial number. Its late editor, Dr. Holland, is of course the theme of much discourse. His singularly checkered career is narrated at some length by Mr. Edward Eggleston; and we have besides the tributes of poets and of his editorial associates, and the respectful addresses of friends and neighbors in Springfield. The effect of it all is greatly to heighten one's estimation of the man and of the writer from the moral side. Two posthumous editorial articles in the "Topics of the Time," one of which aims to show that the prayer for President Garfield's recovery was answered, while the other treats, apropos of Garfield, of "Poverty as a Discipline," are as characteristic as possible of Dr. Holland's intellectual qualities. Mr. E. V. Smalley contributes a sketch of the prominent traits of President Garfield with truthfulness and insight, and his paper is illustrated with an interesting portrait of his subject as a lad of sixteen, and a beautiful engraving of the Presidential candidate of 1880. Another relic of rare interest is presented in a copy of a life-mask of Abraham Lincoln, made in 1860 by the sculptor Volk, who recounts the history of it with sympathetic humor and directness. The chin is smooth, and nothing hinders the study of the remarkable features of the lower half of the face. Yet a third President is commemorated by Mr. Horatio King, in an article equivocally entitled "Buchanan's Loyalty," of which the contents are mainly letters to and from Mr. King, while First Assistant Postmaster-General, from Oct., 1860, to March, 1861. These reveal his own anxiety lest the President's inability to withstand the secession influences about him should prove fatal to the Union, and the efforts of his correspondents—notably General Dix, then postmaster of this city—to achieve the impossible task of maintaining the authority of the Federal Government and satisfying the South that the North would make fresh concessions to slavery. This mode of Union-saving is not now held in the esteem it then was, and Mr. King naturally makes a free use of asterisks in quoting the correspondence. Nothing new is developed, and as it clearly appears that Buchanan remained imbecile to the last, never dismissing a Cabinet officer however open his disloyalty, one is rather surprised to find Mr. King winding up with an apology for his "policy of forbearance." We should have been glad to hear his opinion of the story, told on page 526 of Clingman's 'Speeches and Writings,' about Secretary Thompson's having gone on a mission to North Carolina to ensure the secession of that State, with Buchanan's permission and hope that "he might succeed." This is said to have occurred in the middle of December, 1860, when the President wanted all his Cabinet officers to stay by him until March. We have only space to mention a few other significant papers in this number of *Scribner's*—Mr. Edmund W. Gosse's "Early Writings of Robert Browning," with its Macready episode; Oswald Seidensticker's "A Colonial Monastery" (Ephrata, Penn.); Prof. E. S. Holden's "The Hiero-

glyphs of Central America," and the first instalment of Mr. Howells's new story, "A Modern Instance."

—*Lippincott's* for December contains a pleasant article on French life by Anna Bowman Blake, called "Some Impressions of an Open-Air People." With regard to riding in France she makes some observations which would probably apply with equal truth to a good many other out-door occupations as cultivated by the French —*e. g.*, that there is an inherent difference between Gallic and English horsemanship, owing to the fact that with a Frenchwoman, or a Frenchman for that matter, the exercise itself is not the sole or chief object of equestrianism.

"All Frenchwomen ride as if conscious of their admirable *tournures*. They pose more or less in the saddle. There is little of that physical delight displayed among the well-mounted, glove-fitted *amazones* who crowd the *Allée des Poteaux*, the Rotten Row of the Bois, every morning in May and June, which one sees across the Channel. The beaming, radiant faces, the fearlessness, the enthusiasm, which characterize the mounted Englishwoman and make of her so different a being oftentimes from the same creature afoot, are all lacking. Frenchwomen ride prettily, if we may be forgiven the tameness of the phrase; their unrivalled grace in this, as in every action of life, standing as an admirable substitute for that oneness with the horse which makes the Englishwoman supreme when in the saddle."

This peculiarity comes from a fundamental difference in character between the Gaul and the Saxon, the latter being always intent, with a sort of barbarous earnestness, upon the object pursued, whether it relates to the more serious or the lighter things of life, the former never pursuing any object without a distinct consciousness at the same time of the relation which he will seem to the spectator to bear to the pursuit. Whether this double consciousness is to be regarded as a defect or virtue can hardly be settled by either French or Anglo-Saxon criticism. Apropos of riding, also, the writer of the article calls attention to the curious freedom from social restraint enjoyed by French horsewomen. Precisely how far this freedom goes it is difficult to get at; but every one who has any acquaintance with French fiction or the French stage recognizes at once the truth of the remark that a Frenchwoman on horseback is allowed a freedom from restraint which is denied the same woman on terra firma. Whether this was originally introduced as an imitation of a supposed English freedom, we do not know; but there seems to be no doubt that the copy has been carried much further than the original. According to the writer from whom we have been quoting, the independence of a mounted Frenchwoman far exceeds that of her English prototype.

—Dr. William Hunt contributes an article on "Popular Fallacies about Surgery," of which he enumerates five: first, the belief that in gunshot wounds the ball is necessarily the source of after-danger, and that the surgeon must extract it—a fallacy which we commend to the attention of the physicians who exercised their skill upon the wound of President Garfield through the columns of the press; second, that after a trephining operation a silver plate is fitted into the opening made in the skull; third, that in fractures the bone is always "set." Dr. Hunt's remarks about these are valuable and interesting. His fourth and fifth fallacies, that nature is perfect in her workings and always salutary, and that doctors disagree, can hardly be put in the same category with the others. Surgeons are called in to perform operations that no one imagines nature will ever effect, and the belief that doctors disagree can hardly be called a fallacy at all. It may be true that lawyers disagree quite as often, but then contention and disagreement are so much part of a lawyer's business that a contentious habit of mind may be supposed to be produced by the study of jurisprudence, while in medicine—the object being simply the application of the results of science to the cure of disease, and science being a sort of common fund on which all physicians are supposed to draw—the laity cannot but be surprised when they find that while in diagnosis a surprising amount of professional harmony is apt to be found, in treatment the difference of opinion seems often to be in direct proportion to the number of physicians employed. With regard to divinity, there being in this no common basis of agreement whatever, the comparison is still more unfair. The following passage, considered as a showing up of the errors of lawyers and theologians, must be regarded as an extravagant piece of absurdity, rather than as throwing any light upon the ratio which disagreement among physicians bears to disagreement in other liberal professions:

"Now compare these statistics with those of the legal profession. As every case that requires judicial decision has disagreeing advocates on each side, and as one side or the other must lose, it follows mathematically, that the lawyers lose fifty per cent. of their cases—a sad showing for those who should dwell together in unity; for we are told that law is the perfection of reason, and yet we see that one-half of the reasoners inevitably fail. We have no reliable returns as to the other profession. We may form, however, some idea of the calculation it would take to make up an average when we consider that the column of figures would include those of the Universalist with his one hundred per cent., or all, saved, down to the all save less than ten righteous, consigned by the Calvinist to the Hades of the New Version."

—The State Historical Society of Wisconsin, at Madison, has just published the fifth volume of its library catalogue. This addition is a work of 585 pages, and the pages of the four previous instalments were 2,491. The whole number of titles, with cross-references, of books and pamphlets exceeds 94,000. In the centennial report on public libraries in the United States, issued at Washington in 1876 by the Bureau of Education, sixty-eight historical societies are described. At that time the bound volumes in the Wisconsin library numbered 33,347. Only two of the historical societies then possessed more books, namely, the Worcester Antiquarian Society, which had 60,497, and the New York Historical Society, 60,000. Yet the Wisconsin accumulations were no doubt less valuable than the smaller numbers which had been more judiciously selected in certain other Eastern cities, especially in Boston, Hartford, and Philadelphia. In the matter of Northwestern subjects the library has been made, so far as possible, exhaustive, but it also embraces a wide miscellaneous range. Its set of British patent reports (3,403 vols.) is believed to be the only copy (since the Chicago fire) in the Northwest. Its transactions of the British Royal Society (154 vols.) is a series that has few rivals in America. Dutch books ought to be plenty in New York, but Knickerbockers have more than once detected in the Wisconsin Holland alcove treasures of their vernacular which they had vainly sought at home. A work just published by Mr. Lyman C. Draper, the Society's perpetual secretary, entitled 'King's Mountain and its Heroes,' is full of details which will be all the more welcome to Carolinians because the authorities for them cannot be discovered in either Carolina. While rich in books, and not without manuscripts concerning local history as well as possessing portraits of more than a hundred State pioneers, the Wisconsin association claims preëminence in the line of prehistoric copper. Aside from half a dozen rude tools in Buda-Pesth, almost the only specimens known in Europe are thirty celts in the Royal Irish Academy at Dublin. These are all of one single type —a sort of hatchet with no helve-hole—and all are small. But in the Wisconsin Museum there are one hundred and ninety-one implements, some weighing five pounds apiece, and the varieties are no less than fifteen. Moreover, all these relics were brought to light within the limits of the State. The Wisconsin historical gatherings and gleanings, contributed by well-nigh six score of authors, already fill eight printed octavos. The papers thus produced, as well as the five volumes of catalogues, have drawn many exchanges and contributions to the library from far and near. The library, daily open to all comers, occupies one wing of the State capitol, which stands in the business centre of the city. Three halls, sixty feet in length, are each girdled by a gallery which doubles the shelf-room, but every corner is crammed and crowded. The building passes for fire-proof, but so many edifices so reputed have been found wanting when tried by the fire-test, that it is believed that the Legislature at the approaching session will vote money enough to erect a structure which, while adequate for a long prospective growth, will approximate in its safeguards against conflagration the British Record Office in Fetter Lane.

—A few weeks since, in giving an account of certain German periodicals belonging to the department of belles-lettres, we were obliged, for want of space, merely to mention the greater part, and did not profess to give a complete bibliography even within the limits to which we confined ourselves. Even if our list had been complete when published, it would not be so now, for German literary journals are born overnight, so to say, and many of them are dead before the world is aware of their existence. Since the publication of the note mentioned have appeared the first numbers of two monthlies—*Vom Fels zum Meer*, already described in these columns, and *Auf der Höhe*, edited by the more renowned than respected Sacher-Masoch. This journal "is to be a neutral ground, on which the interests considered are to be those of humanity at large, and where the great minds of all nations and opinions shall contend with each other openly, honorably, and in a dignified manner." After this high-toned generality, the editor becomes more specific in describing the aim of his magazine, which, it seems, is "to avoid the malicious spirit by means of which the clique of Berlin mediocrities [*Auf der Höhe* is to appear in Leipzig] have sought to conceal their own incapacity." The editor, moreover, is not only free from that selfish narrow-mindedness which causes other German authors to discourage rising talent because of the possibility of future rivalry, but he may also pretend to be an inspired critic, for he has discovered, in his writer of fiction, a genius of the highest rank, which, it is needless to say, the above-mentioned Berlin clique were quite unable to appreciate. Miss Arand is the name of this new light, and the editor gives a pathetic account of how, "ignorant of the cliques and intrigues which rule the German literary market, of the sway of the mediocrities who discourage all genuine talent," she was reduced to despair when, fortunately for the world, she heard of *Auf der Höhe*. It is but fair to say, however, that the prospectus announces a good list of articles by very respectable writers.

—A correspondent calls our attention to the fact that our list did not include that venerable periodical *Das Magazin für die Literatur des In- und Auslandes*, from which in past years we have often quoted, and of which we have held a high opinion. A year or two ago it changed editor and publisher, since which time it has seemed to us to have steadily deteriorated, being much more scrappy and miscellaneous than formerly, and deprived of the admirable correspondence from Paris, London, St. Petersburg,

etc., which, with the careful studies of Heinrich Homberger, the then editor, made it perhaps the most uniformly readable critical journal in existence. It has lately become the organ of the "Allgemeiner Deutscher Schriftstellerverband"—a questionable honor, since hitherto only journals of small circulation and doubtful future have cared to give so much space to dry reports; the *Litterarische Correspondenz*, a by no means ill-conducted paper, and the *Magazin's* immediate predecessor, sank beneath the burden. But our reason for not mentioning the *Magazin* before was simply that it did not come within the field we proposed to discuss—a fate which it shared with many well-known and admirably conducted journals, such as the *Litterarisches Centralblatt*, the *Historische Zeitschrift*, *Aus allen Welttheilen*, and others.

—We have more than once referred to the work of A. Barth on the 'Religions of India' as one of the highest order of merit in its particular field. It is the product of original studies by a scholar of eminence, who is especially versed in the study of religions. It appeared, two years ago, as an article in the 'Encyclopédie des Sciences Religieuses,' published at Paris. It is now reproduced, in a somewhat extended form, as one of the volumes of Trübner's Oriental Series; and it is to be most heartily commended to general notice, as at the same time truly learned and in the best sense popular. Its divisions are: the Vedic religions; Brahmanism; Buddhism; Jainism; and Hinduism, or the modern forms of Indian faith—to the beginnings of which, however, Barth is inclined to attribute an antiquity decidedly greater than has hitherto been allowed. The detailed notes give abundant reference to the sources of knowledge, and to the works of original investigators. Another volume of the same series, issued along with this, is called a 'Manual of Hindu Pantheism,' being an annotated translation of a Vedânta treatise, by Major Jacob. It addresses itself, of course, to a much more limited public.

— The *Revue Politique*, having expressed its opinion on the value of German *Gemüthlichkeit*, is delighted to find in the *Rundschau* a confirmatory example. Martin Miller, the author of the most sentimental novel of the most sentimental school of novelists—the German in the last century—fell in love with Lotte, as gay a girl as he was lachrymose a lover. But she was good-hearted and submissive, it appears, for at his instance she abandoned her gayety and became as tearful as himself. They read Klopstock and wept together; they looked at the moon and wept; their very kisses were drowned in tears. They parted in floods of grief. But, alas, he did not return. On his travels he found a still more tearful maiden, and married her, and when she died nearly thirty years later, within three months he married his cook, about whose lachrymation nothing is said. As for Lotte, no doubt she recovered her gayety when she lost her sobbing suitor. At any rate she had other lovers, and after some years of married life we find her exchanging friendly letters—no longer tearful—with the faithless Miller. Many tears and little troth, thinks the Frenchman. Moral, as before: How much better we do these things in France.

—The Reports of the Norwegian North Atlantic Expedition have been already alluded to in these columns. The latest is the report on the *Gephyrea*, or Sipunculoid worms, by the veteran Doctors Koren and Danielssen. Only sixteen species were obtained, yet of these seven were new, and represented two new families and four new genera. In *Hamingia* the curious arborescent organs, sometimes known as "respiratory trees," were determined to have a secretive (probably renal) function, as previously suspected, but also warmly contested by some observers. A curious feature is the total absence of nodes or ganglions in the nervous system. In *Epithetosoma* the perivisceral cavity was found to communicate with the exterior by two fissured openings which admit sea water. This is a feature hitherto unknown in the entire group of *Gephyrea*. The text, as before, is in parallel columns of Norwegian and English, and consists of about fifty pages, with six exquisitely drawn plates and a map of the region explored.

—We are informed by cable telegram that Minister Morton has had an interview with M. Gambetta on the subject of pork. This is a good subject for the intervention of diplomacy, and we shall be glad to learn what comes of it. Some months ago the French Government prohibited the importation of American pork, for the alleged reason that it was dangerous to health. The real reason was the same as that which induces us to put prohibitory duties on a great many articles of foreign growth and manufacture—viz., "protection of native industry." The *Journal des Économistes* promptly avowed this to be the true reason, and there can be no doubt of it. Protection to native industry is an art in which the French have been skilled ever since the time of Colbert, whom our protectionists are in the habit of extolling as a great statesman and financier. If not the founder, he was at least the prophet and forerunner, of the "American system." His precepts have had a revival lately, and one of its effects has been the prohibition of American pork. Now, if Gambetta is as shrewd and witty a statesman as our Mr. Morton, he will agree to suspend the prohibition, and to establish in place of it the same duty on the *habillé-de-soie américain* (American pig) that we impose upon French silks. This would answer all the purposes of the Gallic pork-butchers, and would at the same time give our farmers something to cogitate upon.

—Rubinstein's "Tower of Babel" and the Sanctus from Berlioz's Requiem were sung by the Oratorio Society on Saturday night at Steinway Hall. Both compositions had been previously heard at the May festival, and that they had given satisfaction was evinced by the immense audiences they attracted this time both at the rehearsal and at the concert. The rehearsal had been so unsatisfactory that there were reasons for doubting the success of the concert; but these doubts were soon dispelled by the admirable manner in which the Sanctus was rendered both by the chorus and the orchestra. There is nothing particularly original in this Sanctus, and yet the total effect is good; its charm being chiefly due to the elementary beauty of simple tone combinations, as in the vocal compositions of the old Italian masters. The "Tower of Babel" may be described as a youthful error of Rubinstein's, although it is in the execution one of the most charming errors ever committed. The plan of creating a special type of music under the name of sacred opera, as a sort of hybrid between oratorio and opera, is, like most hybrids, sterile; and the fact that Rubinstein in "The Maccabees" and subsequent works adopted the form of opera pure and simple shows that he too felt the truth of this view, although he may not have admitted it in words. It might be supposed that the pictorial background of such a work as the "Tower of Babel" was too complicated and impracticable to be realized in the form of stage scenery. But when we read of the wonderful scenic effects that are being prepared for "Parsifal"—such as a floor of marble, which is to reflect like a mirror, and a garden of fairy flowers which in a few minutes spring up, fade and die—or of the Rhine daughters swimming about under the surface of the Rhine in "Rheingold," even the realization of a Tower of Babel seems to offer no insuperable difficulties; and there is no reason why the experiment should not be tried here in New York. However, Rubinstein's music is so beautiful that his "Tower of Babel" is quite able to hold its ground even if the falling tower, the rainbows, the lightning, etc., have to be supplied by the imagination of the hearer. The first half of the work is far less interesting than the second. The gem of the whole is doubtless the chorus of the descendants of Shem, an exquisite specimen of local color, which lies in its quaint and unusual melodic intervals, and strongly reminds one of the wonderful charm of the choruses in Rubinstein's grandest stage work, "The Maccabees." Hardly inferior in beauty are the following choruses of the descendants of Ham and Japhet, and we should like to suggest that if at the remaining concerts of the Society it should be impracticable to repeat the whole of the "Tower of Babel," these three choruses at least might be again put on the programme. That the chorus and orchestra would be willing to repeat them was shown by the spirited and finished manner in which they were rendered. Several passages in this work no less than in his later operas prove Rubinstein to be the most dramatic of all Semitic composers. And yet, what is considered the most dramatic effect in the "Tower of Babel"—the destruction of the tower—impressive as it is, could have been made much more so if in the intervals between the tremendous crashes of the "obbligato drums" the chorus and orchestra kept up a sustained fortissimo instead of repeating a series of broken or interrupted chords. The soloists were Herr Remmertz and Signor Campanini, and they were both satisfactory. Herr Remmertz was particularly applauded after a fine rendering of "A tower whose lofty height," and Signor Campanini after "The dark and stormy clouds." We fail to understand why Campanini should have felt called upon to sing his part in Italian. He has surely been in this country long enough to have learned to pronounce our language. If he looked at the text, he must have seen that it differs from that of Italian operas in being sensible and poetic, and that it should therefore be sung in a language understood by the audience. Dr. Damrosch had his forces under good control, and the only criticism we have to make relates to the chorus of boys, which was not always in perfect tune, and evidently needs some sifting. Nor does it seem to be in accordance with concert etiquette that some of these boys should get up before the end and put on their overcoats.

DRAPER'S KING'S MOUNTAIN.

King's Mountain and its Heroes. By Lyman C. Draper, LL.D., Secretary of the State Historical Society of Wisconsin. With steel portraits, maps, and plans. Cincinnati: Peter G. Thompson. 1881. Large 8vo, pp. 612.

IN this long but valuable monograph, the battle of King's Mountain, which was fought just south of the boundary line between the Carolinas, October 7, 1780, is shown to be an important landmark in the history of the war for American independence. From that nearly equal border fight of about an hour's duration, between a picked force of nine hundred loyal backwoodsmen, under militia colonels like Shelby and Sevier, and a detachment from the regular army of Cornwallis, together with a strong force of upland Tories, under the command of Ferguson, sprang the first real current of American success in the Southern campaign. From this historic battle-ridge we can look back toward the sur-

render of Lincoln at Charleston, the rout of Gates at Camden, and numerous minor reverses in the Carolinas; before us can be seen the American victory at Cowpens, won by a bayonet charge of the Maryland line, under John Eager Howard; the repulse of Cornwallis from Virginia by Massachusetts regiments under Lafayette, and the final capture of the British army at Yorktown by Washington and his allies.

As the Yorktown centenary quickened the historical spirit of the whole country and laid the foundations for a national monument, so the centenary of the battle of King's Mountain, worthily celebrated last year by the unveiling of a completed shaft of granite, prompted Mr. Draper "to set about the preparation of his long-promised work." The author, who is well known to all American antiquaries for his labors in upbuilding the Historical Society of Wisconsin (now one of the best in the country), began more than forty years ago to collect materials for a history of this and of other battles in the South and West, proposing to make a special study of the border warfare of this country. He has in contemplation a series of works, "embracing in their sweep the whole frontier, from New York and Canada to the Gulf of Mexico." He proposes to treat in special monographs such themes as Sumter and his men, Pickens and the battle of Cowpens, the life and campaigns of General George Rogers Clark, Boone and the pioneers of Kentucky, Kenton and his adventures, Brady and his scouts, Mecklenburg and its actors, Tecumseh the Shawanoe leader, Brant the Mohawk chief, border forays and adventures—in other words, to compose some ten volumes, "of which this [of 612 pages] is the commencement." We are very kindly disposed toward Mr. Draper, but 6,000 pages of reading matter upon any subject, however interesting, is rather a formidable prospect. The tendency of historical science nowadays is toward economy of expression. Leopold von Ranke, the most eminent of living historians, has this year edited a 'History of the World,' from ancient Egypt down to the decline of Greece, in one volume smaller in size than 'King's Mountain and its Heroes.' Another German specialist, Max Duncker, has lately rewritten the 'History of Marathon' in less than twenty-five pages (Sybel's *Historische Zeitschrift*, 1881, *fuenftes Heft*). To be sure, the materials relating to King's Mountain, a few of which are reprinted in Mr. Draper's appendix of 128 pages, are far more extensive than the few classic authorities upon Marathon and Thermopylæ.

The distinguishing merits of Mr. Draper's history are his comprehensive survey of the events in the Southern campaign leading up to the victory of King's Mountain, his thorough mastery of details, his personal knowledge of Southern topography, his intimate acquaintance with local incidents of border warfare, his lifelike pictures of the character of the mountaineers, who, armed with rifles and well mounted, gathered in clans from the neighboring counties, under militia colonels of local celebrity, and cut off Ferguson's retreat from North Carolina, where he had attempted to effect an uprising of Tories. The biography of some of these "colonels," given with minutest particularity, will not only be interesting to their numerous descendants in the South and West, but will prove valuable to the American sociologist, interested in the survival of "types." Mr. Draper's work throws much light upon the militia system of the South during the Revolution. It is safe to say that the success of that popular uprising will never be fully understood until a thorough study has been made, in all the old seaboard States, of the outcroppings of old English militia institutions—as conspicuous in sparsely settled Southern counties as in the densely settled towns of New England.

One of the most striking facts in the Southern campaign against Cornwallis is the close similarity between the modes of popular uprising and defensive warfare in that region and in New England, where the Revolution broke out Everywhere, whether at the North or at the South, we find local agitators, in the persons of select townsmen, colonels, justices of the peace, and others. James Otis and Samuel Adams, addressing a Boston town meeting, have a Southern counterpart in Patrick Henry, addressing a throng of people in St. John's parish church at Richmond. Virginia and the Carolinas had their Paul Reveres speeding from shire to shire and spreading tidings of the enemies' march. The spirit of the old Teutonic *Heerbann* was a portion of the inheritance of all English colonies in America. This spirit early pervaded the new world, and it now fills the old. We see it to-day in the idea of the German *Landsturm*, and we saw it revived twenty years ago in this country in a general uprising of the Northern and Southern clans, who fought as fiercely with one another as did ever Saxon tribes or the Scotch and the English. The select body of clansmen under Colonel Campbell who won the battle of King's Mountain were for the most part Scotch-Irish Presbyterians. Mr. Draper thus admirably describes their characteristics:

"Those from the Holston, under Campbell, were a peculiar people, somewhat of the character of Cromwell's soldiery. They were, almost to a man, Presbyterians. In their homes, in the Holston Valley, they were settled in pretty compact congregations; quite tenacious of their religious and civil liberties, as handed down from father to son from their Scotch-Irish ancestors. Their preacher, Rev. Charles Cummins, was well fitted for the times; a man of piety and sterling patriotism, who constantly exerted himself to encourage his people to make every needed exertion in defence of the liberties of their country. They were a remarkable body of men, both physically and mentally. Inured to frontier life, raised mostly in Augusta and Rockbridge counties, Virginia—a frontier region in the French and Indian war—they early settled on the Holston [beyond the Alleghanies], and were accustomed from their childhood to border life and hardships; ever ready at the tap of the drum to turn out on military service; if in the busiest crop season, their wives, sisters, and daughters could, in their absence, plant and sow and harvest. They were better educated than most of the frontier settlers, and had a more thorough understanding of the questions at issue between the colonies and their mother country. . . . They trusted in God and kept their powder dry." (Pp. 242-3.)

Not alone in self-reliant piety, but also in stern regard for justice and for the forms of law, were these Presbyterian soldiers of the South akin to the Puritans and Independents of England and New England. After the surrender of the Royalists at King's Mountain, the leading Tories, for their murders, and house-burnings, and shameless atrocities, were condemned to be hung. This sentence, like that passed upon Charles I., was thought to be according to forms of English law. Mr. Draper shows that this was not the act of "private soldiers," as Bancroft has said, but of a court-martial, composed entirely of officers. Undoubtedly they proceeded according to their best knowledge of martial law, which had its historic origin in the exigencies of camps and campaigns. The observance of English modes of legal procedure was as much an instinct with those militia colonels of Virginia and the Carolinas as it was with the Pilgrim Fathers when, without legal authority, they hung Billington for murder, or with the Massachusetts courts which condemned Salem witches according to laws inherited from England.

RECENT NOVELS.

Aunt Serena. By Blanche Willis Howard. Boston: James R. Osgood & Co.

Eleanor Maitland. By Clara Erskine Clement. Boston: James R. Osgood & Co.

Rosemary and Rue. [Round Robin Series.] Boston: James R. Osgood & Co.

The Mysteries of Heron Dyke. [Franklin Square Library.] New York: Harper & Bros.

The Private Secretary. [Franklin Square Library.] New York: Harper & Bros.

Family Fortunes. By Edward Garrett. London and New York: T. Nelson & Sons.

Queen Titania. By Hjalmar H. Boyesen. New York: Charles Scribner's Sons.

'AUNT SERENA,' like its predecessor, 'One Summer,' is a story of very unequal merit. In Aunt Serena herself we have a picture of a very sweet woman. The author has drawn her very distinctly: "her gracious ways; her loving kindness; . . . her most enchanting fairy-godmother surprises; . . . her old-fashioned grace; her frail helpful hands; her smile." "St. Serena," says her niece Rose Wellesley, "never thought anything about herself at all. She had no time to stand in a niche. She would have been too busy to stay there. She wore rather rich and costly garments, and old lace and very becoming caps. . . . She needed no hair-shirt or other penance for her soul's grace, because she had brought up from early infancy Rosamond Wellesley; and that was deemed discipline enough for one earthly pilgrimage." She takes her beautiful niece to Europe. There in a little German town Rose meets the hero, a man of talent, handsome and rich. It is a very natural, straightforward love-story to its climax while listening to the opera "Lohengrin." That scene is well done in something of Miss Thackeray's manner. It would have been far better if that had been the end, for what comes after is as unnatural as it is unpleasant. A lady whom Sydney Bruce had once known, if not loved, presents herself, upon her own invitation, at Aunt Serena's party for Rose's birthday. She is a figure now familiar to commonplace, the Circe of the Cleopatra pattern. The author endows her with every charm of person and manner, especially of the latter, and yet on the next page she does that for which "repulsive" is only the mildest word that can be used. One would be glad to leave her in oblivion, but a protest is needed against the false colors with which such characters, of late more than ever, have been painted. The coarse, scheming nature will betray itself; it cannot put on the garb of purity and truth. Speaking generally of the book, the fine New England types in it did not need as a foil the narrow walls of a German *pension*, with its petty, gossiping life, and occupants not only mean but, what in a novel is worse, stupid.

'Eleanor Maitland' is an amiable dissertation on comparative manners, and none the less a dissertation in that it is parcelled out among a half-dozen interlocutors. The heroine is rich: we have her fortune in round numbers. She is handsome; who would not be, in "a dress of pale blue satin—that tint which is only comparable to the concentrated moonlight of last month shimmering and glimmering under the full rays of the present moon"? She is intellectual: "Her studies had been confined to languages and general literature, this last having been taken up systematically, by periods, and under capable masters." To natural science now, at the height of the Washington season, "she methodically gave her time from ten to twelve each day, three mornings of the week being passed with the professor, a learned man of the Smithsonian Institution." The hero is a German of high birth as well as

official rank. His mother's pride of position is the obstacle which love finally surmounts. Von Zelle resigns his birthright to his younger brother, thus leaving himself free to marry Eleanor. We are at loss to see why the author should forego such a crowning proof of the superiority of American feminine manners and character as might have been offered, had she made the old Countess yield to the charms of Eleanor herself, rather than to the sacrifice of her persistent son. Whether it be from the ponderous wealth of the Americans, or from the burden of the ancestral dignities of the Germans, the book is very heavy. In 'Aunt Serena' the declaration is made in two broken words and answered in one eloquent glance. Von Zelle takes twenty lines (fine print, too) to tell his love. There are some passing sketches of fashionable life in Washington and Boston as well as Berlin. How true they are, might be better judged if one knew from which the author had drawn this curious inference: "How few men have any good degree of acquaintance with a woman who do not put a hand upon her arm or shoulder in a thoughtless if not a familiar manner." It is a minor matter, but it seems not a mistake of the types that the first line of Luther's hymn is differently misquoted in each of these books. It should be:

"Ein' feste Burg ist unser Gott."

'Rosemary and Rue' is another "international" story, though the scene is laid a hundred years ago. It is rather a series of prettily sketched episodes than a connected narrative. It begins with the escape of the Quaker Selah Greene and his daughter Rosemary from a mob in New Bedford, and ends with her death by the guillotine to save her mother-in-law, the old Countess d'Osy. Rue is a young French Jewess of one of the families that settled in Newport in colonial days. Both the young maidens are charming figures, spite of such inconsistencies as setting a Quakeress of that day to paint the Cupids of Boucher for the *grandes dames* of Paris, or Rue's quoting, in the midst of her broken English, the phrases of our version of the Hebrew Bible. Her English, by the way, like the English of the German "Von Zelle," is not genuine, nor even a successful imitation. To write absurd English is not to make good "broken English," for there is a law in the very oddity and drollery of the latter. It consists either in the misuse of words which have been caught up and remembered, or else in the exact transfer of the foreign idiom. "Faire mourir votre fils" would never suggest "I died your son." This transfer of idiom is especially noticeable in the case of German, where the order of the words is subjected to a law so inflexible and so different from our own.

To commend 'The Mysteries of Heron Dyke' would be to commend a book highly sensational; but it has nothing worse than murder in it. A periodic ghost, pocket-picking, burglary, an attempt at abduction (the least probable incident in the book), and murder, all in one story, ought to satisfy the most ravenous appetite. The special villain of the piece is a novelty, a gentleman of fashion who not only bets and gambles, but steals his friends' sleeve-buttons as well as their watches and purses, and robs the doctor of his snuff-box and his hostess of her jewels; but it may be open to doubt whether it is the office of the novelist to discover or invent new varieties of thieves and burglars.

There is a whole class of books which a critic would prefer to ignore, or at most to mark "Dangerous passing"; but sometimes a book wears such a fair semblance of right that without an explicit warning it might easily mislead. Such is 'The Private Secretary.' A young lady, to support her father and brother, both ne'er-do-weels, accepts a situation as private secretary to Mr. Clifford, a gentleman of quiet, studious habits, devoting his time and the large surplus of his income to modest, well-considered philanthropy. Miss Reid is indeed a lady, brought up not by her father, but by a careful aunt and uncle, so that she is exceptionally well educated. She is high-minded, clear-eyed, and solely and generously devoted to her home. Both parties soon perceive the anomalous position in which they have placed themselves, but for the first third of the book the reader admires the tact with which Miss Reid sustains herself, for the sake of the indispensable salary, and the delicate consideration with which Clifford observes the proprieties of the situation. Of course they fall in love, and it can be conceived that a plot might still have been imagined which should not destroy honor and purity. But the book goes over to evil completely. Because of an inconvenient will, Clifford cannot marry without loss of fortune—not entire loss if he does not marry before the cousin to whom he is betrothed by a family compact. He allows Miss Reid to believe that he must lose all if he marries, persuades her to the sacrifice of herself for his sake and her younger brother's—to be his "by every real bond save the formal one." She consents, and they fly to the Continent. Repentance comes shortly, and he marries her, though not till he discovers that his cousin has made a runaway match. In what is called "an hour of retribution," his wife discovers his deception, but, for all that appears, forgives him totally. Something is said of his regret in after-life, but the book has no condemnation for his baseness. Nor is there by him or by Hilda Reid any recognition of duty, of obligation not to commit the sin against their own souls. The fact is, however, that the whole conclusion is an impossibility. No such conclusion could follow such a beginning. The same radical inconsistency of plot has appeared more than once of late. The man and woman of the first half of the book could never have thought the thoughts and done the deeds of the second half. Character must go for something, and to suppose that years of steady self-control, of continual doing good, leave man or woman at the mercy of a momentary temptation, or of a deliberate sophistry, is to mock at all the motives that can make life noble.

There is a delightful portrait of an old servant woman in 'Family Fortunes'—the one steady figure in a somewhat wandering chronicle about various young people. "Our lass has done more than maist folk's lads," said the dying mother of Barbara Craig, and Barby served the Farquhars with true Scotch faithfulness and shrewdness. She has her word for the master who is over-anxious for his young daughter Margery. "Ye think unco weel o' the warld, sir, gin ye think it's the gude lasses it rins after; and unco ill o' the warld, gin ye think it's such a dreidfu' place for an auld maid to bide in!" Yet she had had her experience. "It's ower muckle the way o' the warld to gar a woman do a' or naething. It's seldom she gets a fair start like the loons. If a lass doesna choose to be a gentle beggar, she has to be a giant Goliath o' sense an' courage. And that isn't in a' o' us, no more than in a' the men!" Her homely sayings are worth remembering. "There's ane way, and but ane, to keep ither folk's 'musts' frae hurting us, and that's to say bigger 'musts' to oor ainsel's." "Dinna open the door to Change till it's chappin'. It's better to wish yoursel' awa' whiles than aye to wish yoursel' back again."

'Queen Titania,' and the companion story, 'A Dangerous Virtue,' are improbable enough, but they have a certain kind of inward force which perhaps proves them true as special incidents, however doubtful they may seem when judged by general laws.

The Ancient Bronze Implements, Weapons, and Ornaments of Great Britain and Ireland. By John Evans, D. C.L., F. R. S., etc., etc. New York: D. Appleton & Co. 1881.

In this volume Mr. Evans has followed up his work upon the 'Stone Implements of Great Britain,' and though the period of which he now treats is lacking in some of the elements of interest that characterized the preceding age, yet he has not failed to make the most of the material at his command. We can trace with him the whole development of the ancient bronze industry of Great Britain, from the time of its introduction into England—when the flat celt and the thin knife or dagger are found in the same barrow with typical neolithic implements—through an intermediate or transition stage, down to the period when the socketed celt and the leaf-shaped sword, associated with other tools and weapons of bronze, as well as with ornaments made of this and other materials, indicate not only an improvement in the character of these implements, but also an advance in the method of manufacturing them, and a decidedly higher stage of artistic culture. Of the thoroughness with which all this is done too much cannot be said. It was a task for which Mr. Evans was well fitted, and he has given us a work which, in wealth of material, clearness of arrangement, and in the liberality with which it is illustrated, is at once a text-book for the special student, and a model for future investigators.

But while we cheerfully award this meed of praise, we may well doubt whether our author is here seen at his best. The subject itself did not admit of the close inductive treatment that lent a charm to his discussion of the antiquity of the implements found in the river drift; and the fact that the investigation was confined to articles made of bronze did not leave him free to deal with contemporary arts and industries in such a manner as to present a full and accurate picture of the material development of the time. Of course it was perfectly competent for him thus to limit the field of his inquiry, and no fault can be found with him for doing so, even though it leaves us, for the time being, without the data necessary to a correct estimate of the civilization of the period of which he treats. Fortunately, however, this omission, if such it can be called, is to be but temporary, as we are given to understand that Mr. Evans will shortly return to the subject, and "depict some of the principal features of the external conditions of the bronze-using population" of the British Islands. Meanwhile we may congratulate ourselves upon the possession of an exhaustive account of the bronze implements of that country, and while awaiting his promised volume we can, in the pages before us, study the mode of life and the manners and customs of the Britons of that early day, so far as they are revealed to us by a knowledge of the different uses to which bronze was applied.

In this portion of his work, as well as in the chapters devoted to the origin and spread of the industry, Mr. Evans will be followed with unabated interest. The story of human progress never loses its charm, and in the account here given of the substitution of bronze for stone in the manufacture of implements and weapons we have the record of one of the most important steps ever made in the march of improvement. Exactly when and where this change took place, and how it was brought about, are questions that cannot be easily answered. So far as known, all the indications point to some one locality in Asia as the place where bronze was discovered, and from which, as a centre, its use was propa-

gated throughout Europe. The pathway along which it travelled into Gaul and Britain is tolerably well defined, and this fact, taken in connection with the similarity in the forms and identity in the component parts of all the earlier bronze implements found there, precludes the idea of separate centres of discovery. Of the circumstances of this discovery we know nothing. Mr. Evans is of the opinion that, in some parts of the world, it must have been preceded by a time when the use of copper was more or less common, and this is very probable. As yet, however, no positive proof of the fact has been found, either in Asia or Europe, though in certain districts of North America we are told that a copper age formerly existed. That the Indians of Wisconsin were ignorant of bronze, and that a few—probably less than one per cent.—of their tools and weapons were made of copper, simply hammered into shape, is unquestionably true; but to call this a copper age, using the words in their ordinary signification, is simply an abuse of terms. Even if it were not, and the use of that metal were greater than it seems to have been, it would no more justify an inference as to the sequence in the phases of civilization elsewhere, than the fact that, among these same Indians, implements of hematite and other iron ores were relatively more common than those of copper, would authorize the conclusion that there was a time previous to the introduction of bronze into Europe when an age of iron ores coexisted there with one of copper. The argument proves too much, and though, strictly speaking, it does not militate against the abstract theory of the existence of a time when pure copper was in more or less general use in some other region, it does not afford any grounds for sustaining it.

With the effort to assign a definite chronology to this period we have but little sympathy. The temptation to indulge in speculation of this kind is very great, but the unknown factors that enter into the calculation are of such a character as to make it but little better than guesswork. Probably all that can be definitely said upon the subject is that it was not synchronous throughout Europe, and that while, in Scandinavia, it lasted down to the Christian era, it probably ceased in Great Britain and France some centuries earlier. Back of this all is doubt and uncertainty, and hence the reserve with which Mr. Evans undertakes to fix a date for the beginning of this phase of civilization in England, and the cautiousness with which he ventures the opinion that, while it cannot have been later than from 1200 to 1400 years B. C., it may have been much earlier.

In the preface Mr. Evans, in a few well-chosen words, returns thanks to different persons for assistance given him in the preparation of the volume, and, among others, he particularly mentions his sister, Mrs. Hubbard, to whom he was indebted for the compilation of the index. This was a task that involved no little labor, and Mrs. Hubbard is entitled to the thanks of all working archæologists for the careful and conscientious manner in which she performed the work.

The Theory of Preaching. Lectures on Homiletics. By Austin Phelps, D.D., late Bartlett Professor of Sacred Rhetoric in Andover Theological Seminary. New York: Charles Scribner's Sons. 1881.

RETAINING the forms of oral delivery throughout this volume, Prof. Phelps offers it to those who are still living of more than twelve hundred students who, in the course of thirty-one years, have been under his instruction, as a tolerably exact transcript of his lecture-room work. He gratefully records the fact that not one of the twelve hundred ever gave him occasion for rebuke or admonition. Some grave suspicion of the quality of students so uniformly blameless would certainly be started in the unregenerate mind were it not that Prof. Phelps appears to great advantage in his book. It is easy to believe that his students found his lectures an agreeable diversion from the more solid work of natural theology and Christian evidences and hermeneutics. They are certainly agreeable in their present shape. They are exceedingly formal in their presentation, and the chapter-headings are calculated to deter all but the most resolute from trespassing upon the author's field. But they are needlessly forbidding. Venturing upon the first chapter, we were carried on from that to another and another until, arriving at the end, we found ourselves regretting that there were no more.

Prof. Phelps's definition of a sermon will seem to many of his readers, if his book is widely read, to be arbitrary and exclusive. It is as follows: an elaborated oral address upon religious truth contained in the Scriptures, intended for popular effect. Underlying this definition and his whole system of homiletics is the assumption that the Bible is a volume supernaturally inspired. He does not, however, hold to this in any literal sense. That "ounce of mother-wit" which some one has declared to be "worth a pound of clergy" is his preservative against the falsehood of extremes. A great many discourses preached on Sunday are not sermons according to the Professor's standard. Every sermon presupposes the divine authority of the Holy Scriptures. It must be the exposition of a Scriptural doctrine. Every sermon must have a text, but a text doesn't make a sermon. When Theodore Parker preached upon "The Future of the Democratic Party," his discourse, says the Professor, was no sermon, even if it had a text. But when he says there could have been nothing in that discourse to serve a religious purpose, a question may arise as to the meaning of the word "religious."

In contending that a sermon implies elaborate treatment, Prof. Phelps has some excellent remarks upon "spontaneous preaching." Here and elsewhere he makes it plain that his valuation of the *donum lachrymarum* is extremely modest. Tears are "sometimes nothing but a nervous luxury. . . . In a public speaker tears are an infirmity to be got rid, never a gift to be vain, of." His advice to weeping clergymen is excellent: "Use tonics; study mathematics; take the fresh air; take to the saddle." He has little doubt that it was some weeping preacher of the "Clapham Set," to which Zachary Macaulay belonged, that spoiled T. B. Macaulay's Christian faith.

A sermon is made up of Text, Explanation, Introduction, Proposition, Division, Development, Conclusion. The terms of this analysis are elaborately treated in a succession of chapters. Five are given to the Text, as many to the Explanation, and the other terms are treated with about equal fulness. Reading the five chapters on "The Text," we have found ourselves wondering how much these marvellous refinements have affected the twelve hundred young men who heard them in their choice of texts. Here are some of the points of contention: May a text be an interpolation or mistranslation? May it be an uninspired sentiment? Must it be a grammatical sentence? There are various others like these. Prof. Phelps decides against mistranslations and interpolations, but adds: "We must concede that it is a misfortune that Christian scholarship has lost from the Bible the only literal declaration of the triune existence of the Godhead." In defending the use of uninspired sentiments occurring in the Bible, special mention is made of the celebrated text, "Almost thou persuadest me to be a Christian." There are several references to this text, but, strangely enough, never a hint of its radical mistranslation, though it is no new discovery of the Revised Version which renders it, "With little persuasion thou would'st fain make me a Christian." Prof. Phelps's discussion of "The Text" is enlivened by many humorous illustrations, the number of which might be indefinitely increased.

An interesting fact brought out in the discussion of "The Explanation of the Text" is the strong aversion in the early New England churches to the public reading of the Scriptures without any comment. This was thought to smack too much of liturgical observance. In one of the chapters on "The Introduction," a slip of the pen makes Samuel Adams instead of John the imaginary author of Daniel Webster's celebrated "Sink or swim." One of the happiest illustrations is with reference to excessive qualifications. It is the story of a sermon from the text, "Train up a child in the way he should go, and when he is old he will not depart from it," which the preacher ended with a fervent appeal to parents, exhorting them to strict obedience of the text, and then added: "After all, brethren, character depends much on the blood."

Prof. Phelps's ideal sermon is not so mechanical as might be inferred from his analysis of it. But it is probable that the value of these lectures for those who heard them consisted much more in what was informal and incidental than in the systematic exposition. There are certain passages in the thirty-third and thirty-fourth chapters, where the "causes that enervate the applicatory power of preaching" are under discussion, in which the Professor's trumpet gives no uncertain sound. In them he characterizes the theology which was New England orthodoxy one hundred years ago as "a theology that cannot be preached." "A working theology in the pulpit must possess three elements—freedom from self-contradiction, *consonance with the necessary intuitions of the human mind*, and harmony with the Scriptures as a whole." The words we have italicized would once have been regarded as decidedly latitudinarian, but the fashion of theology, as of this world in general, passeth away. The volume closes with a noble justification of a cultured ministry in reply to the call for something "cheap and nasty" to supply the popular demand.

Classiques Anglais. Shakespeare: Macbeth. Édition classique par James Darmesteter, Docteur ès lettres, Directeur-adjoint à l'École des Hautes-Études. Paris: Ch. Delagrave; New York: F. W. Christern. 1881.

THE well-known house of Ch. Delagrave, Paris, is publishing a series of English classics for use in schools, and sends us an edition of "Macbeth," which is a model book of its kind. An introduction treats of the English theatre before Shakspere; of Shakspere's life, his works, and the history of his genius. It also gives an analysis of "Macbeth," an account of its sources, a discussion of its date, its history as an acting-play, and the text. All these matters are discussed with the clearness, completeness, and good taste of the best French criticism, and with admirable brevity; they are brought within ninety-four pages of open long-primer. M. Darmesteter is the first representative in France of the historical school of Shakspere students. French literature has heretofore treated Shakspere's plays in the old way as works of pure inspiration—an

inspiration depicting different subjects, to be sure, but always the same inexplicable outpouring embodying nothing of the author. The man Shakspere has been treated as an amanuensis or a plain mirror—a mere colorless power of writing anything and everything. M. Darmesteter, on the contrary, makes it a main point to trace the development of his powers from the inexperienced and young-mannish work of "Titus Andronicus" and "Love's Labour's Lost" through all their marvellous history. He follows for the most part the work of Mr. Furnivall, Prof. Dowden, and other members of the "New Shakspere Society" of London.

The text of "Macbeth" is good, adhering somewhat more closely to the folio than the common English editions. Explanatory notes are given at the bottom of the pages, and are admirable in their brevity, clearness, and the selection of points to explain. Notes are also given to illustrate the influence of the play on subsequent literature, mostly passages from famous authors imitated from it. This kind of illustration is very interesting, and hardly less important in a text-book than the passages from prior and contemporary authors with which all good students' editions illustrate difficult passages. It is one of the striking peculiarities of the best philological teaching of literature to connect the classic that is read in class with later classics, so as to bring it home to the students, and it would be good for editors generally to follow M. Darmesteter's example. A large number of these imitative passages are from Byron. He talked about Pope's being a greater poet than Shakspere; but "Macbeth" certainly made a sufficient impression upon him. The influence of "Macbeth" is further treated in two appendices—one on "Macbeth" in France, the other on "Sleep no more." We learn that this play is the most popular in France of all the works of Shakspere. The translation of Lacroix was played a hundred nights in succession in 1863. Rachel sought to rival the glory of Mrs. Siddons. She invented a touch for the sleep-walking scene. "Oh! mais, j'ai une idée, moi," she said: "je lécherais ma main." M. Darmesteter thinks that the poet would have accepted this Dantesque trait, and that Rachel's use of it shows that one can understand both Racine and Shakspere. French literature abounds with types of character and current expressions drawn from "Macbeth." Hugo has imitated it in many passages. "Sleep no more" is repeated not only as an expression of remorse, but as the doom of an inspired poet.

The cheapness and neatness of the book are worth mention. We have good paper, print, and fair plain binding, with nothing for show, at half the price perhaps of an English or American book of the same literary grade. One fault, however, is to be found: the proof-reading of parts of the Introduction is wretched. Henry IV. will be printed for Henry VI., Richard II. for Richard III.; the figures of dates are wrong here and there; Shakspere's youngest daughter is called Edith; and the like. For this proof-reading M. Darmesteter, in his Preface, gives his special and cordial thanks to the "professeur d'anglais au lycée Saint-Louis."

Matabele Land and the Victoria Falls. A Naturalist's Wanderings in the Interior of South Africa. From the Letters and Journals of the late Frank Oates, F. R. G. S. Edited by C. G. Oates, B. A. London: C. Kegan Paul & Co. 1881. Pp. xliii.-383. Maps and illustrations. 8vo.

THE chief value of this book is in the appendix, which consists of papers by the late Prof. Rolleston, Prof. Westwood, and others on the collection of skulls, birds, insects, and plants, made by Mr. Frank Oates in South Africa. The remainder is an account of the travels of this gentleman, compiled from his letters and journals, together with a brief memoir by his brother. These posthumous publications, the outcome of a sincere affection, are rarely successful, and often do injustice to the person whose lives they commemorate. The editor is hampered by a natural unwillingness to change in any way the writings entrusted to him, and the result often is that the attention of the public is called to that which is of interest only to a small circle of friends. This, in our judgment, is the case with the present work. Mr. Frank Oates did nothing to deserve especial notice either as a traveller or a naturalist. Had he lived to write an account of his journey, containing accurate descriptions of the birds and insects of the Zambesi region, he might have made a distinct contribution to science. As it is, we have a dry record of a singularly uneventful two years' wanderings, through a country now even better known than parts of Poland or Hungary. His one exploit, which cost him his life, was a hasty visit to the Victoria Falls, a toilsome and difficult journey, but dangerous only to the health. Unfortunately, of this visit, which was interesting because made during the rainy season, when the river is at its height, we have only this brief notice by himself: "After breakfast I visited the Falls—a day never to be forgotten." A fever contracted on its banks proved fatal a month later. His book also suffers from the fact that it appears soon after those of Holub and Serpa Pinto, upon the same regions, and inevitably, though very unfairly to him, provokes comparison with those important works.

Frank Oates landed in Durban April 19, 1873 and started immediately for the Matabele country, with the intention of going directly to the Falls, and, if possible, to the region lying north of the Zambesi. On September 15 he had reached the abode of Lobengula, the King of the Matabele, and obtained his permission to visit the Falls. The next fifteen months were spent in the attempt to pass over the two hundred miles which lay between him and his goal. The difficulties were due partly to vexatious accidents and incompetent servants, but chiefly to the climate. The natives themselves have a great dread of the fever, and for a considerable part of the year the King absolutely refuses to let any of his people accompany travellers to the river. His solicitude for the safety of the Europeans in his dominions is somewhat remarkable, as the following extract from a letter of Mr. Oates shows: "My old man is the cousin of the King and nephew of Mosilikatze, and the King sent him with me as a special mark of favor. If any harm had befallen me, he would have been held responsible, and with most fearful zeal did he fulfil his office. He would never let me sleep without a hut, or do anything he deemed imprudent or unhealthy, carrying his care of me to such a pitch that it was often a very great bore." At length, on December 31, 1874, Mr. Oates succeeded in reaching the Falls, though the only safe months for doing so are apparently from July to November. Allowing himself but a day or two on its fever-haunted banks, during which he took two water-color sketches, which are reproduced in his book, he started on his homeward journey, but died before reaching the first settlement, and was buried by the roadside.

"Many miles after they had left the grave, one of Frank Oates's pointers—his favorite 'Rail'—was found to be missing, and boys were sent back in search of him. These men sought long and wandered far in vain, till at length in their pursuit they got back even to the grave, and there, patiently watching, they found the devoted creature laid. A little longer and he must inevitably have fallen a prey to lions or other wild beasts: but now he was taken down with his companion to Bamangwato, whence they were subsequently conveyed to England. And thus it happened that, whilst Frank Oates's friends at home were rejoicing at the speedy prospect of his return, and wholly unsuspicious of the truth, this faithful dog was watching, the sole mourner, by his grave."

A word of unqualified praise should be given to the maps, the plates illustrating the scientific papers, and the admirable index which the book contains.

Oddities of the Law. By Franklin Fiske Heard. Boston: Soule & Bugbee. 1881.

MR. HEARD has collected in this little volume a number of anecdotes, sayings, remarks, and comments told of or attributed to judges, lawyers, and law-reporters. As in all such collections, many of these are old, some of them trite, and others of little value. The professional reader will, however, find in it not a few things which will be new to him. Several of the anecdotes relate to Mr. Justice Maule, whose caustic humor is better known to English than American lawyers. On one occasion a man who had been convicted of bigamy before him, on being asked why sentence should not be passed upon him, explained to the court that his wife "took up with a hawker, and ran away five years ago"; that he had never seen her since, and that he had married his second wife in consequence of this desertion. Mr. Justice Maule thereupon proceeded to instruct the prisoner before passing sentence as to the course which he ought to have taken under the circumstances:

"I will tell you what you ought to have done; and, if you say you did not know, I must tell you that the law conclusively presumes that you did. You ought to have instructed your attorney to bring an action against the hawker for criminal conversation with your wife. That would have cost you about a hundred pounds. When you had recovered substantial damages against the hawker, you should have instructed your proctor to sue in the ecclesiastical courts for a divorce *a mensa et thoro*. That would have cost you two hundred or three hundred pounds more. When you had obtained a divorce *a mensa et thoro*, you would have had to appear by counsel before the House of Lords for a divorce *a vinculo matrimonii*. The bill might have been opposed in all its stages in both Houses of Parliament, and altogether you would have had to spend about a thousand or twelve hundred pounds. You will probably tell me that you never had a thousand farthings of your own in the world; but, prisoner, that makes no difference. Sitting here as a British judge, it is my duty to tell you that this is not a country in which there is one law for the rich, and another for the poor."

On another occasion, when in the act of passing sentence upon a man, the governor of the county jail came to the table to deliver some calendars to members of the bar, and in doing so offended the judge by passing between him and the prisoner. He called the governor's attention to his breach of decorum in the following impressive manner: "Don't you know," said he, "you ought never to pass between two gentlemen when one gentleman is addressing the other?" and an apology having been offered by the governor, the interrupted interview was concluded by a sentence of the gentleman addressed to seven years' transportation.

As an illustration of the value of readiness and humor in trying cases, there is nothing better than the story told by Erskine with regard to a cause tried by him before Lord Kenyon at Guildhall which turned upon the rule of the road. The judge seemed disposed to leave it to the jury whether the plantiff might not have saved himself from a collision by going to the wrong side of the road, where, according to the testimony, ample room was left. Perceiving that Lord Kenyon was doubtful on this

point, Erskine said to the jury, in stating the defendant's case:

"Gentlemen, if the noble and learned judge, in giving you hereafter his advice and opinion, shall depart from the only principle of safety (unless where collisions are selfish and malicious), and you shall act upon it, I can only say that I shall feel the same confidence in his lordship's general learning and justice, and shall continue to delight, as I always have delighted, in attending his administration of justice; *but I pray God that I may never meet him on the road.*"

The expression of this pious hope not only made Lord Kenyon and the jury laugh, but put in such a forcible way the dangerous uncertainty which would have been created by abandoning the strict rule on the subject, that the jury was charged as Erskine desired.

A good story of Lord Ellenborough, who never lost an opportunity of being wittily savage to counsel, is given. On one occasion he showed some impatience at a barrister's speech, upon which the latter paused and inquired: "Is it the pleasure of the Court that I should proceed with my statement?" To which the Court replied: "Pleasure, sir, has been out of the question for a long time; but you may proceed." Two rather instructive anecdotes are given which bear upon the value of professional reputation in argument. The learned Sergeant Williams, the editor of the learned Saunders, was a poor advocate, but a man whose knowledge of the law of real property was unequalled. In a case before Mr. Justice Lawrence, himself a learned judge, a question arose of a purely technical character with regard to the operation of a recovery, upon which the Court expressed some doubt. Instead of citing any cases in support of his view, the worthy sergeant only emphatically said: "I assure you, my lord, it is so—upon my honor, it is so"; upon which the Court at once yielded. On the other hand, in the well-known Ryves case, in which Mrs. Ryves attempted to establish her claim to royal descent, a very unfortunate appeal to honor was made by Dr. Smith, who was beginning to say in his address to the jury for the petitioner that "on his honor, he believed his client's case to be well founded," when the Chief-Justice interfered, and peremptorily said that "he could not allow the learned counsel to pledge his honor on his own belief. To do so were a violation of the rules of the profession, and dishonor to counsel." Dr. Smith was obliged to apologize.

Country Pleasures. The Chronicle of a Year, chiefly in a Garden. By George Milner. Boston: Roberts Bros. 1881. 12mo, pp. xii-345.

THERE is a class of economists who point out the fact that American and Russian wheat is now cheaper in England than English wheat, and argue that English farming is to become a thing of the past. Worse than this, the English manufacturer is to follow the English farmer out of existence, according to the same prophets, as soon as steam machinery is somewhat more perfected, and coal a little cheapened, upon the Continent and in the United States. The income of the great estates is to be rapidly reduced; the commercial and the political importance of England are to be greatly lessened, if not to pass away. Yet "the United States of Europe" are not to be the losers. English landed estates, we are told, being no longer profitable as farms, are to be divided among a select company of *rentiers*, lovers of retirement and of nature. Great Britain, in short, is to be transformed into parks, preserves, and gardens, and become the paradise of northern Europe, the chosen home of those who neither dig nor spin, and who share Mr. Ruskin's aversion for the power loom and the steam plough.

It is curious to see how a movement which certainly looks in this direction is withstood by one at least of the great interests we have named—the manufacturing interest. Mr. Milner's chronicle is mostly that of a sylvan year in his garden at Moston, Lancashire, in a "parish or township already threatened on one of its borders by the fast approaching outworks of a great city," presumably Manchester, and where the Yorkshire hills can only be seen on days when the wind is easterly, and when also "the ejection of smoke is less than usual." So near has the town-demon approached to his garden; and yet we shall give a false impression of Mr. Milner's book if we do not hasten to say that it is given to few writers of our time to take us as far as Mr. Milner has taken us from "the smoke and stir of this dim spot." His book is thoroughly, penetratingly rural—a year book of rural seasons as studied in the centre of England for the most part, but recording occasional trips to the moors and to the Lake district. The author's method is a new, or at least an unworn one: it is to chronicle week by week and month by month the garden life of a single year (the year 1878), and to illustrate what he has seen and enjoyed by frequent quotations from the range of English poetry, in this manner connecting his own with a more general experience. Thus, under date of February 13, he writes:

"The sun rose only two or three fields away. He was a near neighbor; his light streamed through the hedges; he seemed to be set in the middle of the landscape, and to be turning everything to his own substance and color. Very beautiful were the long shadows of the trees, stretching across the hoar-frosted lawn. My own shadow—

> '—Spindling into longitude immense,
> In spite of gravity, and sage remark
> That I myself was but a fleeting shade,
> Provoked me to a smile. With eye askance
> I saw the muscular proportioned limb
> Transformed to a lean shank. The shapeless pair,
> As they designed to mock me, at my side
> Took step for step.'"

These quotations form a part of the author's plan; they are not to be regarded as selected merely "for the enrichment of the text." Mr. Milner adds:

"It has been the writer's habit to associate certain passages of literature with certain scenes of natural beauty, or with particular phases of country life, in such an intimate way that the pleasure given by the one was in no small degree dependent upon the existence and recognition of the other; and as the writer's chief object has been to convey to the reader as completely as possible the delight which he himself felt, it became not only desirable, but necessary, to insert such passages as were already connected in his own mind with the things described."

Such a task is, of course, a delicate one, but Mr. Milner has brought to it a fine scholarship in English poetry, from Chaucer to "his latest disciple," William Morris, and sympathy and taste of the most delicate. We may best indicate his literary gift by saying that among other English lovers of nature Christopher North reminds us of him the least, and Miss Mitford (in 'Our Village') perhaps the most. But Mr. Milner has a wider range of knowledge and of intellectual sympathy than Miss Mitford. Not to compare the creative gift of the two men, we should liken Mr. Milner's tastes and training to those of Mr. Tennyson, from whom he makes frequent citation: for our taste, indeed, he quotes a trifle too frequently from Tennyson; and one is surprised to find Andrew Marvell's name absent in his very catholic index of authors quoted. White of Selborne depicts a breezier out-door life than Mr. Milner, and Mr. T. Jefferies at his best has a minuter forest lore than any English writer of our time. But the present book is a delightful one, abounding in delicate and interesting observations, sometimes framed as commentary upon the poets:

"It has been said that the skylark never sings after the sun is below the horizon, and that Shelley was wrong in speaking of the bird as singing

> 'In the golden lightning
> Of the sunken sun.'

But the poet was unquestionably right. On this occasion [Whitsuntide, June 11] the moon was perceptibly brightening; and although there were thin streaks of fading color in the upper sky, the sun had been set for twenty or thirty minutes, and the west was already cold and gray. The bird was in no hurry to finish his vesper; but came slowly down from a great height, singing on his way and making but a faint drop at the last. There were no trees near him, and I saw him waver over the meadow until he found his nest and sank quietly into it. So you see the lark 'startles the dull night,' not only at its departure, as Milton puts it, but also upon its appearance."

And Mr. Milner finds place occasionally for criticism of the poet's form as well as subjects; on *Perdita's* description of the daffodils—

> "That come before the swallow dares, and take
> The winds of March with beauty; violets dim
> But sweeter than the lids of Juno's eyes
> Or Cytherea's breath"—

he comments thus:

"This passage is probably the most felicitous piece of expression in the language, and our best example of discreet and faultless art, coexisting with the flowing openness of an apparently spontaneous evolution. Much of the exquisite harmony of the lines will be found to depend on the way in which alliteration, not too conspicuous, is carried from line to line; and on the fact that, perhaps with one exception, there are not in any one line two accented feet carrying the same vowel sound."

We have quoted enough to show that while Mr. Milner is not an "apostle" of nature, nor yet of culture, he is a very entertaining writer.

BOOKS OF THE WEEK.

Alden, W. L. The Cruise of the Ghost. Illustrated. New York: Harper & Bros.
Anderson, C. H. Armour; or, What Are You Going to Do About It? New York: W. R. Smith & Co. $1.
Anderson, J. Scotland and its Early Christian Times. Second Series. The Rhind Lectures in Archæology for 1880. Edinburgh: David Douglas.
Ayers, A. The Verbalist: a Manual Devoted to Brief Discussions of the Right and Wrong Use of Words. New York: D. Appleton & Co.
Bryant's New Book-Keeping, Elementary and Practical. Buffalo: J. C. Bryant.
Burton, J. H. The Book-Hunter, etc. Philadelphia: Robert A. Tripple. $3.
Darwin, C. The Formation of Vegetable Mould, through the Action of Worms. With Illustrations. New York: D. Appleton & Co. $3.

The Nation.

NEW YORK, THURSDAY, DECEMBER 8, 1881.

The Week.

THE most important topics discussed in the President's message are the civil service, our South American relations, and the silver question. With regard to the first, he "urgently recommends" that an annual appropriation be made by Congress to carry out the existing provisions of the law (§ 1753, U. S. R. S.) authorizing the President to prescribe regulations for the admission of persons into the service, and to "employ suitable persons" to conduct inquiries into the fitness of applicants. With regard to competitive examinations, which he refers to as the "principal feature" of the measure urged upon Congress and the Executive, he suggests that the chief argument in its favor is the success of the British civil-service system, which is based upon it. A life-tenure of office, however, which may be considered an essential part of the English plan, the limitation of the maximum age of admission, and retiring allowances, he thinks, are not looked upon with favor in this country. Nevertheless, he says emphatically, "to a statute which should incorporate all its essential features I should feel bound to give my approval." He expresses at the same time serious doubts as to the advisability of doing anything of the kind, and makes objections to each feature of the English system, and suggests that as that system itself was the growth of years, we ought to proceed slowly. As he does not say what he thinks of our past rate of progress, it may be inferred that he means that we ought to proceed "just slowly enough," but not "too slowly." His objections to competitive examinations grow partly out of the usual Stalwart feeling about "mere intellectual attainments," and this explains the suggestion of the submission of "a portion of the nominations" to a central board of examiners selected to test the fitness of applicants without competition. On the whole, this part of the message is very remarkable as being the first serious discussion of the "British civil-service system" by a Stalwart politician. Hitherto the Stalwarts have never been able to refer to it with straight faces, and the fact that their spokesman has stopped laughing at it, and made an explicit announcement that it must be treated as a serious political question, is an encouraging sign of the times.

With regard to the sole guarantee of the Panama Canal, the President insists that the existing Clayton-Bulwer treaty, which provides for a joint guarantee, must be modified, and says that he has "supplemented" the action of the late Administration by proposing to the English Government a modification of the treaty, and "the abrogation of such clauses thereof as do not comport with the obligations of the United States toward Colombia, or with the vital needs of the two friendly parties to the compact"—which is sufficiently vague to cover almost anything. As to Chili, Bolivia, and Peru, he is entirely non-committal with regard to the instructions given to our representatives, but says that, on account of the "serious misapprehension of the position of the United States" in both countries, he has sent a "special envoy" to each of them, with "general instructions" intended to "bring those powers into friendly relations." The envoy referred to is no doubt Mr. Trescott. He recommends the abolition of all internal taxes except those which fall directly or indirectly on tobacco and spirits, and suggests a commission to revise the tariff. He thinks that perhaps the tax on whiskey might be lowered. He approves the recommendations of the Secretary of the Treasury that the silver certificates be retired, that the act calling for their issue be repealed, and that the monthly coinage of silver be stopped. He says that he has directed the Star-route cases to be prosecuted with vigor, strongly urges appropriations for the construction of a navy, and among minor matters recommends further legislation against polygamy by requiring the registration of marriages in the Supreme Court of Utah, and the admission of the testimony of wives against their husbands.

The President has sent two Commissioners to Lima and Valparaiso to look into the conduct of Messrs. Hurlbut and Kilpatrick, and explain to them what their instructions really are. One of these, Mr. W. H. Trescott, who goes to Peru, is a trained diplomat. Mr. Walker Blaine, the son of the Secretary of State, goes to Chili. He is a clever young man, who, after a few months' training in the State Department, is probably sent to Chili to give him a little experience in diplomacy and a pleasant foreign trip. Mr. Trescott's mission is the more important of the two. He is accredited to the Hurlbut Government, but whether Hurlbut will recognize him or have anything to do with him remains to be seen. According to the *Herald's* Washington despatches, a gentleman "who is thoroughly acquainted with the nature of the misunderstanding" says that the President merely intends to try by persuasion and argument to get Chili to treat Peru in a lenient and civilized manner; but he adds these significant words:

"*Should President Arthur adopt the views which Secretary Blaine has held upon this subject*, the Government will take steps to intervene and insist upon Chili releasing Garcia Calderon. Although this course doubtless is a delicate one, it may be necessary to adopt because the United States Minister has already recognized Garcia Calderon, but had not ascertained if his was a government *de facto*. The further difficulty in the adjustment of the affair is that the Chilians, having arrested Garcia Calderon, who really never exercised the functions of a *de facto* Governor of Peru, have now to treat, if they treat at all, with Pierola, he being the only person they can recognize as the head of the Government."

The fact that Calderon is now under arrest in the hands of the Chilians, shows, as they say in "Patience," what a particularly singular kind of a government *de facto* that kind of a *de facto* government would be.

Guiteau appears to have misconceived the theory of Judge Porter's cross-examination of himself on the witness stand. He evidently fancied that it was to be a trial of his wits instead of his lack of wits, and accordingly he made the most of his opportunity, and bent himself to the task of giving the Judge as good as he sent. Whenever he was led up to anything like inconsistency he either sheered off, or fell to blackguarding the Judge, or refused to answer. When, for instance, the Judge asked him if he would have shot President Garfield on July 2 if Mrs. Garfield had been with him, he replied that he would not. Then, pursued the Judge, interrogatively, "it depended entirely on your will?" The prisoner saw the trap and perceived that there was no way to avoid it except by shutting his mouth and refusing to answer; for if it depended entirely upon his will, then the agency of the Deity in the case was eliminated. So he took up a newspaper, adjusted his eye-glasses, and commenced reading, pretending that he had already answered the question more than once, and that it would be a waste of time to answer it again. For one whose sole defence is the plea of insanity he has been much too smart. He has had some little training as a lawyer—just enough to know that in ordinary criminal trials it is best for a prisoner to avoid contradicting himself, but not enough to know that an insane man will contradict himself frequently without being conscious of the fact.

The annual report of the Attorney-General contains very little that is important or new. He calls attention once more to the condition of the Supreme Court docket, which shows an increase of causes undisposed of, and recommends that United States attorneys be paid by salaries in all cases instead of fees. He points out that under the present system the emoluments of the officer depend upon the number, and not upon the importance of the prosecutions undertaken in his district. He adds that "it is believed that all these officers would prefer to be paid entirely by salaries, as not infrequently it is unjustly suggested against them that prosecutions are encouraged for the sake of making fees." The objection to fees might be put on a stronger ground than this. We may sympathize with the sensitiveness of the unjustly suspected district attorney, but this is, after all, a matter of sentiment. He can learn to suffer and be strong, and the Government loses nothing from the unjust suspicion. The serious fact is that the fee system furnishes ground for just suspicion as well. As long as the income of district attorneys depends on the number of cases they bring, some district attorneys will infallibly bring suits for the mere purpose of getting fees, and by this the Government will lose money. It is not merely, therefore, on account of the feelings of the shy, sensitive district attorneys that the system should be broken up.

We have had so much criticism lately of the

manner in which the duties of bank examiners are performed that it is interesting to see what their superior officer, the Comptroller of the Currency, thinks about the matter. The official view is produced in full in his report, which has just been published. What it amounts to is simply this: that the main portion of the work of seeing that the business of the bank is honestly managed must fall upon the directors, and that it is the stockholders, after all, whose duty it is to see that the directors are the kind of men they ought to be; that it is the duty of the examiners to look after the directors rather than the inferior officers of the bank; that it is not possible for the examiners to make anything like a thorough examination of the condition of any bank; that they are not bound to do so unless they "see reason to suspect dishonesty or fraud." In this case, he says, "it is their business to investigate thoroughly, and they should employ experts to assist them in so doing." But here, again, he maintains that it is not possible for them to do what they should do, inasmuch as "the small compensation provided by Congress does not contemplate the yearly auditing of all the accounts of a bank by an examiner, as the pay is entirely inadequate for such work, the amount allowed for the examination of banks of like capital being the same, without reference to the difference in the volume of their business." Unfortunately, "reason to suspect dishonesty or fraud" in the management of a bank seldom or never lies on the surface. It is very seldom indeed that bank examiners can count upon discovering such a reason in doing what the Comptroller says is all that they are ordinarily required to do, namely—ascertaining whether the officers of the bank and its directors are complying with the mere requirements of the law. Perfect bank inspection, such as will completely assure the business public, must consist not simply in finding out whether the accounts of the bank show on their face that the directors and officers are complying with the Act of Congress, but whether the accounts really tally with the facts. The bank is, after all, not a place where books are kept, but a place where money is kept, and the main question is not whether the bookkeeping is good, but whether the money is there. Any system of examination, therefore, which does not ascertain whether the money is there, or which waits to have a suspicion excited by mere discrepancies on the face of the accounts, must necessarily be defective.

The fact is that banking, unlike most other business, has to be conducted on what may be called a basis of suspicion. Every man connected with it, whether borrower or depositor or officer, has to be treated as a person who may possibly fail to do his duty or keep his engagements. The mere requirement of collateral security for every loan is a sign of suspicion. The exaction of bonds from bank officers means suspicion. The existence of Government examiners means suspicion. Banks are examined because there is, as a matter of law as well as of business experience, standing reason to suspect everybody concerned with its management. A bank conducted without this standing suspicion would soon become a very rotten concern. Every examiner who goes to a bank, therefore, is bound to treat everybody connected with it as legitimately open to suspicion. He has no right to treat any officer's character as raising him above suspicion. If he is not paid enough, or has not time enough to enable him to make a thorough examination, of course he is not to be blamed for not doing so, but such examination as he is able to make should be conducted, as far as it goes, not on the assumption that everybody in the bank is doing his duty, but on the assumption that he is not doing his duty.

The reserve of the New York banks was reduced during the week slightly below the twenty-five per cent. limit, and while the money market was easy enough during the greater part of the week, a sharp stringency was manipulated toward the close. The effort of the Secretary of the Treasury to drive cash out of the Treasury by prepaying called bonds without rebate of interest was only moderately successful, and a call was made for the redemption on January 29 of $20,000,000 more three and a half per cent. bonds, which it is expected will be prepaid if the present stringency in the loan market continues. The public debt statement shows a reduction last month of $7,249,126, making $62,373,471 for the first five months of the fiscal year. The London money market was easy during the week, and the market here for exchange on London became heavy. After several meetings of an informal character, the representatives of the trunk-line railroads failed to arrive at any plan for settling the "war" which has now raged for so many months, the two main points of contention which remain being those which caused the war. The first of these is the demand of Mr. Vanderbilt that the other roads shall abandon New England territory to the New York Central; and the other is that differential rates shall be abolished. The failure of the efforts to make a settlement, and the stringency of the money market, caused a decline in speculative stocks which ranged from ¼ to 4½ per cent., although there were exceptions to this general course of prices. United States bonds early in the week were strong, but the agitation of new funding schemes caused a lower market for the extended 5's and 6's late in the week. The general domestic trade of the country continues very active. In the foreign trade the tendency is still toward a falling-off of exports and an increase of imports, or toward a reversal of the course of the last few years.

The Tariff Convention got thoroughly tired of "the papers" on Wednesday week. In fact, paper reading broke down early in the day, leaving twelve papers unread. The delegates refused to submit to any more of them, and it was resolved that a representative of each industry should be allowed five minutes to say what it needed in the way of protection—that the delegates, in other words, instead of perorating on the principles of government, should supply information on the subject which they best understand, the profits of their own trade. There was, however, very little information forthcoming. Every one said that his business needed protection. Some said that they needed more protection than they had, owing to some foreign enemy trying to undersell them. The quinine man, Mr. Jones, fell foul of Mr. J. S. Moore, and asked for a duty on quinine, which he apparently thinks the sick get too cheap. They ignominiously expelled one of their vice-presidents, Mr. Constable, of this city, for desiring a reduction of duties on raw materials, which they evidently consider a nefarious suggestion. Mr. Roach was allowed to read another "paper," or rather have it read, before the resolutions were adopted. These were, as usual, a mass of generalities, praising the tariff, and demanding its revision in the interest of more protection. The chief lesson of the Convention is that nothing short of total prohibition will ever satisfy protectionists as a whole. Nothing else can ever produce "harmony."

The rejection by the Tariff Convention of Mr. William D. Kelley's resolution for the repeal of internal-revenue taxes leaves the country, so far as the Convention can control its destinies, in the harrowing situation of having a probable surplus revenue of one hundred and fifty millions per annum. This surplus, applied to the redemption of the 3½ per cent. bonds, will clear them all out of the way inside of four years and be productive of further evils well known to Mr. Wharton Barker and other publicists of Philadelphia. It is not the least singular of the proceedings of the Convention that the rejection of the Kelley programme regarding internal taxes should have been based not upon financial or business considerations at all, but on dread of the catch-word "free whiskey." The people, it was contended, would never tolerate free liquor. It was rather broadly insinuated, and the suspicion was evidently strong in the minds of the delegates, that "the people" would consider a repeal of the tax on distilled spirits equivalent to making grog absolutely free to all drinkers, so that a man could get drunk for the asking. "Protection" itself having considerable value as a catch-word, the delegates were not so rash as to expose it to needless collision with another catch-word of perhaps equal potency. The Convention finally passed a resolution for the repeal of stamp duties on bank checks, friction matches, and proprietary medicines.

The *Tribune* has apparently fallen into some confusion of mind about the Thugs of India, whom it uses as an illustration in discussing Guiteau's case. It says: "They run amuck, and kill or maim all who come in their way," and "no doubt honestly believe their murderous frenzy to be a religious impulse." Our esteemed contemporay has evidently been mixing up the Thug and the Malay. The Thug does not, and never did, "run amuck." He killed much, but he killed stealthily, deliberately, and with wonderful skill in concealment, and generally, if not always, by strangling. His murders, it is true, were acts of worship of his goddess Kali,

but his worship was sober and calm, and he did not maim people. The Malay who "runs amuck," on the other hand, does so sometimes under a "religious impulse," but oftener under the impulse of bang, and sometimes for the fun of it. The matter is of more importance than it seems, because an illustration is one of the things the whole value of which depends on their correctness. If you use the rose as an illustration, for instance, it must be a real rose, as it exists in nature, and not a rose of your mind; if you use a mule, it must be the true mule of Western and Southern teaming, and not the mule as you would like him to be—sweet and reasonable, and soft in the mouth. And in like manner, your Thug must be the real Thug of Hindostan, and not an imaginary Thug of the Spice Islands.

There is a performance going on in Kansas at this moment which is probably as disgraceful an exhibition of lawlessness as has occurred in any part of the country during the last ten years, and which, if reported from the South, would lead to numerous reflections on the part of the Northern press on the barbarism of that region. A banker has failed at Caldwell, in that State, and, we presume, has failed fraudulently. He was in the custody of the Sheriff under an execution of some sort, in the ordinary course of law, when he was seized by a large mob, who have held him for a week and carried him from place to place—all the time threatening his life unless he turned over to his creditors certain property which he had, or was supposed to have, in his possession. Nor has this been done secretly. The news of the operations of the mob and their negotiations with the prisoner have been telegraphed regularly to all parts of the country by the Associated Press. The State authorities have been in full possession of them from day to day, yet he is still, at this writing, in the hands of his assailants, and, we presume, still liable to be hanged unless he has satisfied the furious crowd that he has surrendered all his assets. If there be one thing in trade worse than fraudulent banking, it is the punishment of bankers by bands of brigands. If lynch law were permitted to punish the most patent and outrageous frauds against creditors, it would certainly not be very long before in some parts of the country any man who failed in business on a large scale, however innocently, would be exposed to the most horrible violence at the hands of any creditor able to get together a crowd of roughs and call them "enraged citizens." The Roman and mediæval legislation against insolvent debtors was barbarous enough, but it was far from approaching this Kansas method in cruelty and indecency. Any community in which this Caldwell outrage has lasted for a week should hereafter hold its tongue about the "Mississippi plan."

The latest news from Brazil shows a healthy growth of constitutional ideas and methods in that country. For some time past the Emperor himself has perceived that if the electoral régime enacted by the Constitution were given up for that of direct elections by the people, the result would be a more trustworthy index of public opinion. After many attempts the trial was made, and the recent election held under it justifies the hopes of its friends. Instead of a unanimous or nearly unanimous Chamber of Deputies, the present Liberal Ministry, which has been as acceptable as any in Brazil, would have to confront, were it to continue in power until the Chamber met, an Opposition of fifty in a house of one hundred and twenty-two members. For the first time in the present reign (and Dom Pedro ascended the throne in 1831) a minister of the Crown has been defeated, and, therefore, has been dismissed from the Cabinet by the people. In the recent election two ministers, both belonging to influential families in Rio de Janeiro and S. Paulo, failed to be reëlected, and their resignation only precedes that of the whole Cabinet at the reopening of the National Legislature a few days hence.

The Government is modelled after those of England and Belgium, and its written Constitution, promulgated more than half a century ago, guarantees most of the political and civil rights enjoyed in the more advanced communities. The trouble in Brazil has been that the people are not sufficiently educated to apprehend and assimilate the liberties granted by law. In a constitutional monarchy, a good division of powers and their proper balance are essential to a smooth working of the delicate machinery of the Government. Thus, if the people fail to take their full share in the direction of affairs, some other power will lose a restraint which by the theory of the Government is indispensable; and that power itself is placed in the false position of usurping attributes not belonging to it. Such has been the case in Brazil. The Constitution is very liberal. The Emperor has no responsibility, and none of his orders is valid unless countersigned by one of his Ministers. These are supposed to be, as in England, a committee of Parliament. The Parliament is made up of two houses, the Senators being elected for life by electors chosen by all citizens having a net income of about one hundred dollars per annum, and the Deputies being elected for four years by electors chosen in the same manner. Such has been the theory. But in practice the electoral laws have been so fashioned as to give undue power to the Cabinet. The Ministers have found it easy to manipulate the electors and corrupt them with the "spoils." And this abuse has compelled the Emperor, in self-defence, to resort to another abuse—that of dissolving Parliament in circumstances not allowed by the written Constitution, thus arousing among the intelligent classes a clamor against "personal power" which would imperil the throne of any monarch less respected than Dom Pedro is.

The repeated efforts Prince Bismarck is making to put the old Emperor into the foreground as the originator and champion of the measures urged in the celebrated "Imperial speech," are not a sign of strength or confidence. There was a time when he would scarcely have resorted to such a stage-trick. His utterance, in response to a complimentary address, that he firmly believed in the "ultimate victory" of his plans, "but had little hope himself of seeing the success of the proposed reforms," has rather a discouraged sound. The recent vote of the Reichstag rejecting by a two-thirds majority the appropriation for the expenses of the "Economical Council," a pet scheme of the Chancellor's, advocated by himself in an "energetic speech," showed very clearly that the combination of the Conservatives and Clericals cannot be depended upon in support of the Government measures. The "Economical Council" was to be a commission of experts on matters of trade, industry, and labor, to consider economical questions, for the purpose of advising the Government and the Reichstag. In proposing the formation of such a commission outside of the Reichstag the Chancellor was suspected of a design to depreciate the parliamentary power and to limit the range of its inquiry and action. The Reichstag, resenting this, voted down the appropriation by 169 to 83, in spite of Prince Bismarck's personal appeal, and in this vote the Clericals were found side by side with the Liberal Opposition. It is most probable that the same will be the case when the tobacco monopoly and the question of biennial budgets come up.

The Scotch landlords have long been separated from the farmers by the fact that they are generally Episcopalians, while the tenants are Presbyterians. It is long, too, since they had any political influence. They had to surrender it in order to get good farming, and they and their tenants have for fifty years belonged in the main to different parties. The landlords are mostly Tories, the farmers Liberals. These things have in some degree assimilated the Scotch landowner to the French Legitimist. Having nothing to gain, like the Englishman, by being "bluff" and hearty and genial, he has become more exclusive and fastidious and blood-proud and even haughty than his English brother, in order to protect his position against the popular lack of reverence for the caste. The farmer has, however, not remained content either with political independence or with the comparatively long leases which constitute so marked a difference between English and Scotch land tenure. He is restive under the stipulations in the lease by which the landlord exercises more or less active control over the mode of farming, and still more under the landlord's right of distress for the rent, or, as it is called in Scotland, the law of hypothec, which makes the rent the first lien on the crops of the year. They are, moreover, no longer content to have rent settled, commercial fashion, by supply and demand; they wish, like the Irish tenants, to have it fixed by a court. The communications made to the landlords by the Scotch Farmers' Associations on these subjects, during the past summer, have been received in some cases with so much hauteur, and even insolence, that they have greatly stimulated the agitation, which has now resulted in what seems to be a very formidable demonstration, which no Liberal Ministry can afford to disregard.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THE Forty-seventh Congress met and was organized on Monday. All the Republican caucus nominees were elected by the House. On taking the chair, Mr. Keifer read a short speech, invoking "aid and generous judgment" in the fulfilment of his duties. All but three of the members of the House were present. In the Senate a number of bills were introduced, among which were bills to provide for the retirement of the trade dollar, and to provide for its recoinage into the standard silver dollar; to place General Grant on the retired list of the army; to punish attempts to take the life of the President of the United States; and to provide for the issue of three per cent. bonds. This last bill was introduced by Mr. Sherman, and enacts that such bonds be payable at the pleasure of the United States after January 1st, 1887, and that the money deposited under the Act shall be applied solely to the redemption of the bonds bearing three and a-half per cent. interest.

The President's message was delivered to Congress on Tuesday. He reviews our relations with foreign nations, and declares them to be satisfactory. Steps have been taken to secure the better protection of American Hebrews in Russia and American missionaries in Turkey. A protest has been addressed to the Swiss Government in regard to the deportation of criminals to this country, and treaties of commerce and navigation have been concluded with Rumania and Servia. In regard to the Panama Canal the President reviews the action of President Garfield's Administration in the matter, and announces that he has supplemented the action of his predecessor by proposing to the British Government the modification of the Clayton-Bulwer treaty, and the "abrogation of such clauses thereof as do not comport with the obligations of the United States toward Colombia, or with the vital needs of the two friendly powers to the compact." The temporary misunderstanding between our Ministers to Peru and Chili is ascribed to the want of "prompt reciprocal communication," and the President announces that he has sent special envoys to both republics, with general instructions which, it is hoped, will enable them to bring these powers into friendly relations. The President, in treating our relations with the East, announces that he hopes at some future time to lay before Congress a scheme for the improvement of our system of consular jurisdiction throughout the entire East. In regard to domestic matters, the President in the main approves the recommendations which have been made by the heads of the different departments in their annual reports. He approves all the important suggestions of the Secretary of the Treasury in regard to the finances; recommends the retirement of the silver certificates, and that the coinage of silver be confined to what is required by demand. He is opposed to the refunding of the 3½ per cent. bonds, unless they can be refunded at a much lower rate than they now bear. The appointment of a commission to revise the tariff is recommended, but "important changes are to be made with caution." In regard to the Star-route prosecutions, the President states that he has enjoined upon the officials who are charged with the matter "the duty of prosecuting with the utmost vigor of the law."

The question of the civil-service reform is treated at some length. The President regards some sort of reform as necessary, but objects to appointment and promotion by competition on the ground that such a method has met with success in England when accompanied with life tenure, limitations of maximum age at entrance, and a retiring allowance, which features he thinks would not be regarded with favor in the United States, and he doubts the success of the system without them. He suggests the "submission of a portion of the nominations to a central board of examiners, selected solely for testing the qualifications of applicants, without resort to the competitive test." The decline of our merchant marine is deplored, and the same kind of aid and protection as has been bestowed upon our manufactures is recommended. To put down polygamy in the Territories, legislation is recommended "by which any person solemnizing a marriage in any of the Territories shall be required to file a certificate of such marriage in the Supreme Court of the Territory." In concluding his message the President calls the attention of Congress to the question of Presidential inability, and recommends that speedy consideration be given to it.

A resolution was adopted by both Houses of Congress on Tuesday, providing for the appointment of a joint committee to consider "by what token of respect and affection it may be proper for the Congress of the United States to express the deep sensibility of the nation at the decease of its late President."

The Republican Senators in caucus on Monday unanimously agreed to support a resolution of Mr. Edmunds providing for continuing the Senate committees as they existed during the last session.

The contest for the Speakership of the House of Representatives was decided in the Republican caucus on Saturday by the nomination of Mr. Keifer of Ohio on the sixteenth ballot. The largest factor in bringing about this result was the transfer, under Mr. Cameron's orders, of the votes of the Pennsylvania delegation from Mr. Hiscock to Mr. Keifer. Edward McPherson was nominated for Clerk of the House and Colonel George W. Hooker for Sergeant-at-Arms. The Democratic caucus which met on the same day renominated all the officers of the last House.

Guiteau continued the story of his life on Wednesday, and gave his reasons for assassinating the President. The court-room was crowded to excess, and Guiteau seems to have felt it to be one of the proudest moments of his life. He reiterated his old story of Divine inspiration, and said that he had considered the country to be drifting into a civil war owing to the split in the Republican party. He caused some amusement by his statement that he had had for twenty years the idea that he was going to be President of the United States, and that he expected to "make it yet," as he anticipated a decided change in public opinion in regard to himself. He made several remarks of this character which would seem to indicate, if not a disordered mind, at least an egotism so excessive as to border upon it. Their effect was counterbalanced, however, by his cleverness in avoiding self-contradiction and in getting out of difficulties when cornered in the cross-examination, which was begun on the same day and was ably conducted by Judge Porter. The aim of Judge Porter's questions was to involve the prisoner in contradictions in regard to his "Divine inspiration" theory. One unimportant but amusing point brought out was Guiteau's novel method of obtaining law business in connection with getting prisoners out of the Ludlow Street Jail in New York. He said that he paid a commission to a prisoner in the jail who was a "big talker," and who would recommend him to other prisoners. The cross-examination was continued on Thursday and concluded on Friday. The prisoner was involved in a few contradictions, but on the whole adhered closely to his "inspiration" theory. He was very insolent to Mr. Porter, and once or twice utterly refused to answer his questions. When he saw himself in danger of being cornered, or when irritated in any way, he was apt to become abusive. His remark in reply to one of Mr. Porter's questions, "If your head is so thick that you cannot get the idea in, I won't try to pound it in. Don't ask your questions in a mean, sickly sort of way," was illustrative of his whole bearing during the cross-examination. On Saturday, among the witnesses examined were Mr. Emory Storrs, of Chicago, and Senator David Davis. Mr. Storrs turned out to be rather an unfortunate witness for the defence, as he distinctly stated that he had never seen anything in Guiteau which led him to believe that he could not distinguish between right and wrong. Nothing of importance was elicited from Senator Davis. On Monday, eight medical experts testified as witnesses for the defence. An elaborate hypothetical question was put to them to the effect that if insanity were assumed to exist in the prisoner's family, and he himself had been at one time demented, and if his alleged belief that he acted on Divine inspiration were assumed to be true, did they think he was insane? To this seven of the witnesses answered that if the proposition were true, the prisoner was insane. The eighth said he would not express an opinion until he had a clearer explanation of the word inspiration than Mr. Scoville gave him. As usual, the prisoner interfered in the proceedings. He showed that he was sensitive on the question of his mental powers, saying that he would rather be "hung as a sensible man than acquitted as a fool." He also objected to the implication that he was a vulgar criminal, saying that there was "nothing vulgar about this case; it is all high-toned."

The public debt was reduced $7,249,126 in the month of November, which makes the reduction for the five months of the present fiscal year over $62,000,000, against $37,000,000 for the corresponding months of last year. The decrease for last month was twice as great as for November, 1880, and the receipts from customs and the internal revenue show an increase of $3,000,000 as compared with the same month of 1880.

The annual report of Mr. Nimmo, the Chief of the Bureau of Statistics, on the foreign commerce of the United States for the fiscal year, shows it to have amounted to $1,675,024,318, a sum larger than in any previous year in the history of the country. There was a great increase in the exportation of the products of the Western and Northwestern States, largely owing to the reduction in the transportation charges on the railroads, lakes, and the Erie Canal.

On Saturday the retiring Grand Jury presented indictments against Deputy Sixth Auditor Tilley and Contractor Brott. The attempt which was made last week to hold Tilley before United States Commissioner Bundy fell through, as we stated in our last issue, owing to the disappearance of Brott, who was to have been the Government's chief witness. As it now turns out, it would have been better for Mr. Brott had he appeared on that occasion, as he is now held as principal instead of witness. The Government's prospects in the Star-route prosecutions, which looked rather discouraging last week, are now brightening a little.

A new Grand Jury will be convened in the District of Columbia at the end of this week, and it is understood that the Government will at once present the evidence against the leaders of the Star-route ring. An indictment will in all probability be found in the Dorsey case, as the evidence is voluminous. In the Prescott and Santa Fé case the defendants will probably plead the statute of limitations in regard to part of the allegations. These proceedings will be watched with interest, as the Government is said to have some strong cases, and an opportunity will be afforded to retrieve previous failures in the Star-route prosecutions.

A new convention for the exhange of money orders between the United States and Switzerland, to go into effect on the 1st of January, was signed by the President on Wednesday. Its effect will be to reduce the charges on orders issued in the United States on Switzer-

land to the same rates as those on French, German, and Italian orders.

The Washington Citizens' Committee of One Hundred intends to take energetic steps during this session of Congress to bring about some action in regard to the Potomac flats. The committee is composed of some of the most influential citizens in Washington, but heretofore, even with the coöperation of the President, they have been unable to bring about any result in this matter, which is of such vital importance to the health of the capital.

Senator Beck was unanimously renominated by a joint caucus of the Kentucky Legislature for Senator, on Thursday. This action of course makes his election a mere formality.

Tax Receiver Hunter of Philadelphia made his report before the Common Council on Thursday. The report shows that great frauds have been committed in the Tax Office and Almshouse departments of the city government. Mr. Hunter stated that the examination of the books of the Tax Office had not much more than commenced, and that he was, therefore, unable as yet to estimate the amount of the frauds. There seems to have been collusion between the Controller and the Tax Receiver, and a system of false entries in the books of the departments adopted by which the city was "annually robbed of thousands of dollars." The whole matter was referred to the Finance Committee, at the suggestion of Mr. Hunter, in spite of an interested movement to appoint a special committee.

One Danford, a defaulting Kansas cashier, has been forcibly detained by his creditors, at Caldwell, under threat of death in case he refused to settle. The Governor tardily made a show of calling out the militia, but was defied by the mob, and a committee finally brought the prisoner to terms.

FOREIGN.

In the German Reichstag, on Wednesday, Prof. Virchow made an attack on the Government. He said that the Progressists, when they joined the *Kulturkampf*, had hoped that Prince Bismarck would definitively liberate the schools from clerical influence. To this Prince Bismarck replied that the reproach was unjustifiable, and that even if he were really inclined to continue the struggle, he should be hindered by the fact that his former allies had deserted him and driven him into the arms of the Centre party. It is said that after Wednesday's proceedings in the Reichstag doubts are no longer entertained that a Clerical and Conservative coalition has been concluded. On Thursday, Bismarck was defeated in the vote for money for the expenses of an Economical Council, notwithstanding the fact that he made a speech showing that this council was absolutely necessary, and that if money for it were not forthcoming, he would be compelled to request the governments of the various States to send their deputies to a Prussian economical council. On Friday there was a discussion on the emigration question, one speaker impliedly advising that less care be bestowed upon German emigrants on their arrival in America, as the present system was only calculated to foster the desire to emigrate. To this it was replied that the Government could not relinquish the care of emigrants either in the ports of departure or landing. It is stated that the Progressist, Secessionist, and National Liberal parties have taken measures in order that the Liberal parties may work together in future.

The Emperor William has had an interview with the President and Vice-President of the Reichstag, in the course of which he emphatically declared that his message, read at the opening of the Reichstag, was the fullest expression of his innermost convictions as to the welfare of the nation.

The speech of King Charles of Rumania in regard to the necessity of Rumanian control of the navigation of the Danube has caused trouble between Austria and that country. The Austrian Government has directed the Austrian Minister at Bucharest to suspend all personal relations with the Rumanian Cabinet until the return to Vienna of Count Kálnoky, the Austro-Hungarian Minister of Foreign Affairs. It is thought, however, that the difficulty will be arranged without much trouble.

The Servian Government will introduce into the Skuptchina in March a Jewish Emancipation Bill in conformity with the Treaty of Berlin. By this bill the Servian Jews will be placed on an equality with Jews who are Austrian subjects.

More Greek post-offices have been closed by the Turkish Government. The Porte has issued a circular to the Powers explaining that the principal motive for closing the post-offices was to retaliate for the premature closing of the Turkish post-office at Larissa. The foreign ambassadors are said to be discussing the post-office question and also the frontier difficulties.

The Russian Government has issued a decree providing that all trials for crimes against the state, as well as those especially calculated to excite the people, shall be held with closed doors, and that only the officers and the wife or one direct relative of the accused shall be admitted.

A court-martial which has excited great interest in Russia has just been brought to a close. Prince Shervashidze, who wounded a merchant in a restaurant last summer, has been found guilty and sentenced to exile in Archangel, with deprivation of his rights as a nobleman.

A St. Petersburg despatch states that the Chinese intend to fortify extensively the western frontier of Kulja next spring, and to transfer there 8,000 families to replace those who emigrated to Russia. There have been two Mussulman revolts against the Chinese garrison at Yang-Hissar during the last four months. They were attended with the usual indiscriminate massacres.

Accounts of disturbances in Ireland still continue. Torturing and killing the cattle of rent-paying farmers is a class of outrages which is growing in popularity. Opposition to rent-paying is said to be especially marked in the county of Limerick, where the Sheriff was reported on Thursday to hold 300 writs of eviction against tenants for rent due. Prof. Goldwin Smith, however, seems to find encouragement in the condition of affairs, as he has written to the *Pall Mall Gazette* that he considers the phase of agrarian crime less dangerous than the domination of the Land League. The rent-paying farmers whose cattle are being killed and who are being shot at every day or two, probably regard this as a very poor sort of consolation. The Ladies' Land League continues active operations in exorting tenants not to pay rent, and in giving assistance to those who obey their behests. A lady, Miss Reynolds by name, who has been especially conspicuous in this sort of work of late, has been served with a summons charging her with aiding and abetting a criminal conspiracy to prevent payment of rent

A great demonstration in connection with the land agitation was held at Aberdeen, Scotland, on Thursday. Two thousand delegates, representing 40,000 farmers, were present. Resolutions were adopted demanding a general reduction of rents, compensation for improvements, the abolition of the laws of hypothec and entail, and other legislation in the interest of tenant farmers. A Farmers' Alliance for Scotland was formed.

A grave robbery has been discovered in Scotland. The body of the late Earl of Crawford and Balcarres was stolen from his tomb at Dunecht some months ago, but the fact was not discovered until recently. Money is supposed to have been the motive of the thieves. No arrests have been made in connection with the matter as yet.

Mr. Samuel Morley, M. P., who has recently been travelling in the United States, made a speech on Wednesday evening, in which he said that he could bear testimony to the hearty feeling toward England which pervaded America. He also said that the Western States offered great attractions for certain classes of the surplus population of Great Britain, and recommended farmers to go there.

A meeting is to be held on Wednesday in Westminster Abbey, to consider the subject of a memorial to the late Dean Stanley. Mr. Lowell has been invited to attend the meeting, in token of the respect evinced for the memory of Dean Stanley in America.

There have been rumors circulated that the Duke of Cambridge was hostile to the appointment of Sir Garnet Wolseley as Adjutant-General of the army, but an official announcement from the War Office, to the effect that General Wolseley will, like his predecessor, transact official business under the authority and responsibility of the Commander-in-Chief, is regarded as a denial of such rumors.

In reply to several speeches in the French Chamber of Deputies, M. Gambetta said on Thursday that he was opposed to the annexation of Tunis, and that the task imposed on France by virtue of the policy she has adopted was not that of annexation, but protection. He said that the regency would prove a vigilant and necessary doorkeeper for the French colonies in Africa. He further stated that the Government had no intention of pushing military occupation to the frontier of Tripoli, because it was not desirable to have the Porte for an immediate neighbor.

M. Rouvier, the French Minister of Commerce, said on Monday that he was willing to withdraw M. Tirard's decree concerning American pork if the Americans would submit to a trustworthy system of inspection; also, that he admitted that the French Chambers ought to respond to the action of the American Congress by taking the initiative relative to the appointment of commissioners to conclude a Franco-American treaty of commerce.

At a recent meeting in Paris of the Consulting Commission of the Panama Canal, convened by M. de Lesseps, the opinion was expressed that the nature of the soil of the Isthmus had been found to be such that it was thought much of the estimated expense of construction would be saved.

The French Scientific Society has submitted a plan for the construction of a canal across France to connect the Atlantic and Mediterranean, which has been approved by the Council-General of the Seine.

It is reported that 3,000 French troops will return from Tunis to France on the 15th instant. A number of the insurgents have surrendered to the French.

The Spanish Senate has passed bills for converting the redeemable debt, and authorizing the Government to enter into negotiations with the holders of consolidated stock. In the Chamber of Deputies a resolution modifying the Parliamentary oath so as to avoid doing violence to the conscience of the deputies of any religious belief, was taken into consideration with the consent of the Ministry.

Radicals have been elected to the Presidency and Vice-Presidency of the Swiss Council of State.

The trial of Esposito, the Italian brigand, has begun in the Court of Assize at Palermo. There are six counts in the indictment.

TUESDAY, December 6, 1881.

THE GUITEAU TRIAL.

In judging the performances of Guiteau at his trial, and the course of his counsel in producing him as a witness in proof of his own insanity, we must not forget that the example of sensationalism in the conduct of the case was really set by the prosecution. It was District Attorney Corkhill who furnished the key-note of the proceedings by the utterly unnecessary minuteness with which he proved the notorious and undenied fact of the killing, and by the unnecessary and most revolting production in court of a piece of the late President's vertebræ to be handled by the jury and the prisoner. It is not surprising that after this both Guiteau and the spectators should have looked on the trial as a species of melodrama, in which everybody was entitled to make the most of his own rôle.

To Guiteau the trial is evidently the great success and the highest gratification of his life. There is probably nothing for which he has longed so much during the last twenty years as public notoriety and an attentive audience. These things he has now for the first time secured. He is more talked about at this moment than any other man in the United States, and he is eagerly listened to on his favorite topic —his own career and his mental condition at various times. But, as a correspondent well pointed out in these columns last week, the craving for fame is not a sign of insanity. In fact, the really insane, if their minds run on this point at all, believe they have secured fame already, while intense desire for it and readiness to resort to almost any means to obtain it, are a characteristic of hundreds of thousands whose capacity to bear the ordinary responsibilities of society no one doubts. Guiteau's conceit and love of talking about himself are, in fact, phenomena with which we are all familiar, not only among the sane but among the eminent and highly placed sane. We see every day able and distinguished men who think their own personality as attractive and deserving a subject as can engage the human understanding. It would never do, therefore, to allow a murderer to escape the gallows by the display of an inordinate self-esteem. It is time enough to doubt the sanity of such a man when he is satisfied that the world shares his own estimate of himself.

After one has got over the absurdity of calling a man as a witness—not as a patient—to prove his own insanity, the thing in Guiteau's testimony which is most worthy of attention is the light it throws on the lives of that large class to which he belongs, and which it is now the fashion to call "cranks." Now that his case has called unusual attention to them, it is found that everybody occupying a position in any sense prominent or public, and particularly newspaper editors, has had much experience of them. They are not absolutely cracked, but they are too unsteady and too wanting in persistence and in capacity for fixed attention to follow any regular calling successfully. They are generally much given to speculation on social and religious topics, and to the concoction of schemes of social reform. American society produces them in larger numbers than European society, because it runs less in class grooves, and presents a wider field of possibility to the philosophical as well as commercial adventurer. The rigidity of custom, and the strength of official etiquette in Europe, steady many a brain which here would go clean daft. It would, for instance, never have entered the head of an English or French Guiteau that he could get the Austrian mission or even the Paris consulship. But here it really was not such a very wild dream after all. He had seen things nearly as good go to persons whose equipment of all kinds was not indisputably better than his own.

A very great stimulus was given to the production of "cranks" by the reform movement of fifty years ago. But then it furnished them with harmless mental occupation. The people who protested against the tyranny of custom by sitting naked on their own stoops in Boston, or who asserted the non-moral quality of all spoken words by swearing profusely in the Concord stage, were not a whit saner than Guiteau. But that general expectation of the social millennium of which transcendentalism formed a part, and which spread over the world after the French Revolution of 1830, may be said to have furnished them with a wide field for their activity. They hung on to the skirts of the anti-slavery agitation in great numbers. They busied themselves with Theodore Parker's theology. They joined in the temperance movement, and made a stand against bolted flour, against meat, raw oysters, tobacco, and perpetual marriage. They started small newspapers of their own for the promotion of their favorite "ism," or published pamphlets, or established little churches which lasted until something new caught their eye. But as a rule they cared little about politics, and paid small attention to the strife of parties. The gradual decline of the transcendental state of mind; the triumph of most of the struggling reforms; the growing indifference of the public to dogmatic discussion; the failure of most of the communistic enterprises, and indeed of nearly all the early efforts after queer living, have now deprived them of perhaps as healthful an occupation as their brains could have had. Guiteau's history shows that the country no longer offers them the old opportunities of innocent fussiness. He took politics up because all other delusions and follies had failed him, and here at last he saw, what he had never lighted on in any of his other ventures, the opportunity for a great stroke.

If the public generally knew with how little respect expert testimony on the subject of insanity is regarded in courts of justice, the interest in the alienist witnesses in the Guiteau case would greatly diminish. The language used about it by the best judges has almost invariably been to the last degree contemptuous. Many of them have sarcastically described it as a kind of testimony which can be got as readily by one side as by the other in any required amount, while at least one court of established reputation has declared it to be absolutely "worthless." The reasons for this unfavorable opinion are very strong. In the first place, expert witnesses are generally retained by the party who produces them. Their value as experts depends upon their reputation and standing, and the greater this is the more they have to be paid. But it also depends entirely on their impartiality, and their impartiality is destroyed by the very fact of payment. The retaining of expert witnesses in criminal trials has long been recognized as a scandal in the administration of justice, and all expert testimony, whether paid or not—and how this may be in the Guiteau case we do not know—suffers from the suspicion attached to it.

In the second place, alienists who pass upon the question of mental disease are in reality not experts on the only material fact involved in the trial of the criminal—that of responsibility for the criminal act. What an alienist does is to pass upon the mental soundness of the prisoner, just as any ordinary physician passes upon a patient's physical soundness. What he has before him, accordingly, is not a standard of criminal responsibility, but one of mental health; and as perfect health is just as uncommon in the case of the mind as of the body, the testimony of alienists almost always discloses the startling fact that they believe a large percentage of the population of the world to be "insane." One of the experts on Monday, for instance, testified that "out of twenty-five persons in ordinary life, five are insane"; that among twenty-five ordinary business men he "would probably find five of them insane." In this statement the witness was probably perfectly sincere, but it has no bearing whatever on the question as to whether Guiteau ought to be hanged.

As has been repeatedly pointed out, this question must be decided mainly by practical tests furnished by common sense and the experience of mankind. This is precisely the point at which law and medical science on the subject of insanity diverge. To ascertain whether a criminal should be punished or not, all that justice requires to know is not whether his mind is unbalanced, or in an unhealthy condition, but whether punishment, or the fear of it, acts upon his mind as it does upon other men's. If it does, then he is responsible for his acts. The legal tests of "capacity to distinguish between right and wrong," and of knowing "the nature and quality of the act," amount to no more than this, and they are not at all the tests which an alienist applies when asked whether a criminal is sane or insane.

When, however, we reach the region of hypothetical questions in such a case as Guiteau's the investigation becomes almost farcical. The hypothetical question asked by his counsel was as follows:

"Q. Assuming it to be a fact that there was a strong hereditary taint of insanity in the blood of the prisoner at the bar; also that at about the age of thirty-five years his own mind was so much deranged that he was a fit subject to be sent to an insane asylum; also that at different times after that date, during the next succeeding five years, he manifested such decided symptoms of insanity, without simulation, that many different persons conversing with him and observing his conduct believed him to be insane; also that in or about the month of June, 1881, at or about the expiration of said term of five years, he became demented by the idea that he was inspired of God to remove by death the President of the United States; also that he acted on what he

believed to be such inspiration, and on what he believed to be in accordance with the Divine will in the preparation for and in the accomplishment of such a purpose; also that he committed the act of shooting the President under what he believed to be a Divine command which he was not at liberty to disobey, and which belief made out a conviction which controlled his conscience and overpowered his will as to that act so that he could not resist the mental pressure upon him; also that immediately after the shooting he appeared calm and as if relieved by the performance of a great duty; also that there was no other adequate motive for the act than the conviction that he was executing the Divine will for the good of his country—assuming all of these propositions to be true, state whether, in your opinion, the prisoner was sane or insane at the time of shooting President Garfield?"

In other words, if he was insane at various times down to the shooting of the President, was he probably sane when he shot him? This is not a very good specimen of a hypothetical question, but its absurdity is only an extreme illustration of the general uselessness of the class of testimony to which the answer it was framed to bring out belongs. The hypothesis is always a mere array of what the counsel who frames it assumes, rightly or wrongly, to have been proved on the trial, stated in the most extreme way for the benefit of his client, and the answer up to which it leads is determined by the form and character of the question.

There has probably never been a case in the history of crime in which expert testimony was likely to prove so utterly worthless as in Guiteau's. It is obvious to any one who has followed the trial that he is not mentally sound. His behavior from the first has been such as would be impossible if his mind were in a healthy state. No expert testimony can make this fact any plainer than it is now. But it is not to find out that he is a "crank" that the trial is going on. What the jury have got to decide is whether, in the case of men like Guiteau, punishment has the same salutary effect that it has in the case of ordinary criminals. It does not require that he should have a well-balanced mind for this; and consequently the opinion of experts as to his sanity or insanity is very nearly irrelevant, while their opinion as to the sanity or insanity of a hypothetical Guiteau, imagined by his counsel, may be set down as totally worthless.

THE SPEAKERSHIP OF THE HOUSE OF REPRESENTATIVES.

The Speaker of the House of Representatives is the most powerful man in the Government next to the President himself. While it is the President's constitutional duty to execute the laws, and he is entrusted with certain limited powers to that end, the Speaker exercises, or at least can exercise, upon the making of the laws not only more influence than the President, but sometimes even more than the majority of the House over which he presides. The principal legislative work of the House of Representatives is done in the committees. There bills are discussed, amended, and prepared in detail. The House itself is more a voting than a deliberating body. Debate is limited, and generally exercises scarcely any influence upon the votes of members, except when so directed as to make an impression upon public opinion calculated to frighten time-serving politicians in Congress. To change a legislative measure in the House against the wish of the committee having it in charge, is very difficult unless the attempt be aided by the Speaker. It is, in the first place, the privilege of the Speaker to appoint the committees which prepare legislation. Then it is the Speaker who "recognizes" members who claim the floor. It is within his power to give the preference to this one or that one, as he may prefer the proposition to be brought forward by this one or that one. He construes in the first instance and enforces the complicated rules of the House, which are a profound mystery to most members, and he may construe and enforce them, or omit to enforce them, in favor of or against motions or amendments as he may favor or oppose these, and the ruling of the Speaker is but rarely reversed by a vote of the House. The action or pretended action of the House of Representatives is not seldom so rapid and confused that scarcely anybody but the presiding officer knows what is going on, and he may sometimes put motions to a vote and declare them carried or defeated without attracting the attention of anybody except those immediately interested. It is, therefore, assumed by many that when the Speaker is in favor of a measure his support is almost as good as a majority, and that when the Speaker earnestly opposes a bill its friends will have to be very keen and active to save its chances. It is needless to point out how dangerously such a power may be abused when entrusted to an unscrupulous man.

The first quality, therefore, a Speaker should possess, to do full justice to the requirements of his position, is that impartiality which rises above all selfish considerations. He should never forget that it is his duty not to do legislative business for the House, or even without the House, but to guide the House in doing that business according to the true sense of the majority. The second requirement for a successful conduct of the Speaker's office is of course a sufficient acquaintance with the rules and with parliamentary practice and precedent, and that quickness and clearness of insight, and promptness of judgment and decision, necessary for the control of a large and somewhat unruly assembly. If the Speaker has in his bearing that natural force of authority which makes itself obeyed, so much the better. It is needless to say that a combination of all these qualities is not very frequently found.

The Republican caucus of the House of Representatives last Saturday nominated for the Speakership Mr. Joseph Warren Keifer of Ohio. Mr. Keifer achieved an honorable reputation as a soldier in the war of the Rebellion, and occupied, not a prominent, but a respectable position in the House of Representatives. There is nothing in his record which suggests a particular reason why he of all men should be chosen Speaker; but comparing him with the other gentlemen mentioned as candidates for the place, there is no apparent reason why he should not be chosen. He is a man of irreproachable character and good impulses. He will undoubtedly try to wield his power in the interest of the public good. His abilities have, by the common opinion of his colleagues, not been rated far above mediocrity. Whether he is as conversant with rules and parliamentary practice as a Speaker should be will soon become known. The minority is strong enough to give him trouble. But he has a certain dignity of manner which not seldom goes with moderate parts, and sufficient affability to conciliate good feeling. If Mr. Keifer does not make a "great Speaker," it may certainly be said that among his competitors there was, except perhaps Mr. Kasson, nobody that might have made a greater one.

Mr. Keifer owes his good fortune to a combination which may embarrass him if he permits it to exercise much influence over him. His nomination was brought about by the interference of Senator Cameron, who induced the Republican members from Pennsylvania to aid in carrying out the decree of the "bosses" that Mr. Hiscock must be punished. The fight between the Stalwarts and Anti-Stalwarts is therefore to go on. The more the old issues between the great political parties become obliterated, the more animated becomes the war of factions inside of them. This is a natural development which will lead to others equally natural. But the "bosses," after all, lack shrewdness. They permit their vindictiveness to run away with their common sense, and this never pays. The New York "bosses" have certainly not strengthened themselves by destroying the chance of a Representative of New York for the Speakership. The "bosses," it seems, have ceased to be sharp politicians.

A SHIPPING REVIVAL.

The somewhat familiar plan for the revival of our ocean carrying-trade which Mr. John Roach submitted to the Tariff Convention differs from other schemes considered by that body in this respect: the latter are intended to continue the fostering process of protection in its application to actual and flourishing industries; the former proposes to create off-hand an industry which has no existence. For the illustration which Mr. Roach triumphantly finds in our coast carrying-trade is really no illustration at all. It may be true that in ten years we have built for that traffic 120 iron and twenty-five wooden steamships, with a total tonnage of 27,563; but we have done it because the coasting trade is absolutely prohibited to foreign nations. The increase of this business, which Mr. Roach says "has exceeded our unparalleled progress in manufacturing industries," is not due to bounties and subsidies, but to the actual exclusion of foreign owners and builders from it. Merchants engaged in this trade have bought dear American ships because they were not allowed to buy any others. Mr. Roach has sold ships for this trade, notwithstanding the higher wages and heavier taxes which builders on the Delaware have to pay as compared with builders on the Clyde, because he has had a monopoly of the market. Commerce along the coast must go in American bottoms, and American bottoms must be launched from American yards or that commerce must cease.

It is scarcely necessary to say that this prohibition cannot be applied to the foreign carrying-trade. We may indeed declare that the flag of the Union shall float only over ships

built in American yards—our navigation laws do so declare; but we cannot declare that there shall be no commerce between this country and Europe except in American bottoms. If we could do that, our ocean trade might soon rival our coasting-trade in growth. But if we should shut English, German, and French ships out of our ports, Great Britain, Germany, and France would shut American ships out of their ports; and in that event it would not be worth while for us to have ocean-going vessels. The illustration which Mr. Roach draws from our prosperous and exclusive coasting-trade, therefore, is not pertinent to a foreign trade in which our high-priced American ships must compete with low-priced English ships.

From the published reports of his address it does not appear that Mr. Roach lays so much stress upon the question of taxes, as related to the shipping interest, as he did some months ago in a letter to the *Evening Post* accounting for the failure of his Brazilian line. Perhaps his silence in the circumstances is not surprising. From oppressive taxes levied by a State to burdensome customs-duties imposed by the United States, the advance is easy, and it would lead a paper-reader before a Tariff Convention upon forbidden ground. We agree with Mr. Roach that ships should be relieved of local taxation so far as possible. When a British owner is assessed only upon the income or profits from his ship, while an American owner is assessed upon the value of his ship without regard to income or profits, the inequality is obvious. We go farther than Mr. Roach, however. We contend not only that ships should be relieved of local taxation, but that foreign articles which enter into the construction of a ship should be free of duty. But so far as a revival of shipping is concerned high taxes furnish an argument for the free-ship policy rather than against it, because, if taxes add to the cost of shipowning, there is the stronger reason for allowing owners to buy ships where they are cheapest. It is worth noting, by the way, that the passage by the Legislature of this State of a law to exempt ships from taxation has not elicited from Mr. Roach those lively expressions of gratitude which might reasonably have been looked for.

It is a mistake to suppose that a shipping revival can be effected by turning the hand or by passing an act of Congress. No "policy" whatever would accomplish so magical a result as to bring to life forthwith a dead industry. We have so far lost the maritime habit, and other nations have so far outstripped us in the race of the seas, that if the most liberal measures were adopted, if unjust taxes and tariffs were set aside, if the navigation laws were repealed to-morrow and our merchants were allowed to buy the best ships in he cheapest markets, our recovery would be gradual and slow. Still less would the flag be restored to the ocean by the most lavish system of subsidies. Apart altogether from the essential wrong of that policy, it would not accomplish what some persons expect of it. It might enable Mr. Roach to sell a few ships, but it would not restore the lost ocean carrying-trade. That trade is a business and must be founded upon broad business principles. A Congress which granted a subsidy one year might withdraw it the next year. Intelligent and farseeing men of business will not risk their capital upon the caprice of Legislatures and politicians. They will not waste their time in enterprises which do not promise to be self-sustaining upon ordinary commercial considerations. The ocean carrying-trade, upon a field of fair competition, might be made such an enterprise, although foreigners have secured such advantages over us that the work would be laborious and tedious; but upon no other ground is a shipping revival possible.

MR. GLADSTONE'S NEW IRISH DIFFICULTY.

The Irish troubles of the Gladstone Cabinet appear still far from at an end, owing undoubtedly to a miscalculation about the working of the Land Act. The Land Commission, which was organized to carry it out, was apparently organized on the assumption that only a few cases would come before it, and that, in the majority of cases, the landlords and tenants would settle their differences about rent by private negotiation, on the basis furnished by the decisions of the Commission. It now appears highly probable that the judgment of the Court will be asked for by one-quarter if not one-half of the tenants, or, in other words, that it is not unreasonable to anticipate from 100,000 to 150,000 applications to have a "judicial rent" fixed. This would give the Commission, with its present force, in spite of the appointment of several sub-commissions, work enough, it is said, for fifteen years to come, and at best would leave most of the applications undecided for three or four years to come. It is plain, in fact, that instead of two or three sub-commissions, there must be one for every county, or thirty-two in all, and that the powers of every one of these would be tasked to the uttermost. The work of fixing a "judicial rent" is by no means confined to hearing counsel and examining witnesses in court. It involves a visit to the farm in litigation, and the examination of the soil in portions of it, and ocular inspection of the whole of it, often in places very remote from that in which the Commission sits. In this way a single case, however simple, can hardly help occupying two or three days.

As yet the Government has taken no decided steps in the way of preparation for the enormous mass of business with which the courts are threatened, and the result is a feeling of disappointment among the tenants, and of renewed hopefulness among the landlords, which furnishes the "no-rent" agitators with a renewed opportunity for pushing their own programme. In other words, they have apparently thus far succeeded in "swamping," or paralyzing, the Land Court, and in maintaining the condition of doubt or uncertainty which was their main capital. Accordingly, larger and larger numbers of the tenants are reported as undertaking to anticipate the action of the court by refusing to pay rent without a heavy reduction. The reduction is perhaps not greater than the court would order, and not so great as English landlords are making voluntarily; but it is imposed on the landlords by combination in defiance of the law, and made to cover the rent already due. To make this resistance more effective, "outrages" are being again resorted to as the nights grow longer, and include every species of violence, from murder and mayhem down to the maiming of cattle. The chances are, too, unhappily, that they will increase in number as the winter advances. How to repress them is now the question which perhaps more than any other occupies the public mind in England, and it is so important that it may be said not untruly to put the very existence of the Gladstone Cabinet in some peril.

The situation is briefly this: The Coercion Bill, which the Ministry passed reluctantly and at the last moment, and at the risk of alienating their more radical followers, has failed. It has not produced the slightest effect on the "village tyrants," or "dissolute ruffians"—the classes at which Mr. Forster said it was aimed—while it has, by locking up a considerable number of orators and writers, including four members of Parliament, justified the worst fears of the English Radicals about its operation. It has apparently had no effect whatever on the outrages. The situation is, therefore, considerably worse than it was before coercion was tried, because the next step to be taken is much less clear.

Accordingly, a discussion is now gradually beginning as to the advisableness of trying a suspension of trial by jury for a certain class of offences which the peasantry do not consider disgraceful in any case, and in agrarian matters look on as positively praiseworthy. It is now universally admitted that no convictions can be obtained for any of the crimes called "outrages" about land. It is, therefore, suggested that the magistrates or judges should be given increased powers of summary conviction. But even if this were done, and all the odium incurred to which a Liberal Government would inevitably expose itself by any restriction on the right of trial by jury, there would still remain the difficulty of getting evidence. Witnesses willing to testify in land cases are just as scarce in Ireland as jurymen willing to convict. Having tried this, if it failed, too, the Ministry would find itself face to face with the terrible alternative of having either to acknowledge complete defeat in their chief enterprise, or to resort to martial law in its worst form—namely, that in which the commanding officer shoots every man whose looks he does not like, or who is found out of doors after nightfall, or who cannot give a good account of himself. It is not surprising that under these circumstances the *Pall Mall Gazette* calls for two or three years' patience while the pending experiment is being tried. It is very unlikely, however, that the British public will now begin the display of a virtue which, in the case of Ireland, they have never shown any sign of possessing.

GOOD READING FOR PUBLIC LIBRARIES.

A large part of the pernicious reading in public libraries arises from the ignorance on the

part of the readers that there is anything better. People take up what is laid before them. A certain portion, no doubt, long for and ask for literary food with a "high" flavor; and another portion cannot digest anything solid; but the rest have no ineradicable objection to a good style, to some little information, and a moderate amount of thought. Indeed, we can go further. In New England at least, though transcendentalism, we are told, has run out, the desire for self-improvement, self-culture, which accompanied it has not yet disappeared. But people's knowledge in the matter does not equal either their desires or their perseverance. They do not know where to begin, or in what direction or how to go on; hence courses of reading, Chautauqua societies, and the like. Nevertheless, these do not reach everybody, and the evil remains that the boy and the young woman and the unliterary adult are turned at large into the town library with less likelihood of getting what is best for them than the cattle on the town common. With certain obvious exceptions, everything is at their call, and everything is presented to them in the catalogue as of equal merit. Books for the young, books for the old, books for the learned, books for the ignorant, books for the studious in search of knowledge, for the tired in search of recreation, for the lazy in search of amusement, are all mingled pell-mell with not the slightest indication of their difference.

It is not that the want had not been felt and pointed out often enough, but the difficulties of execution were great, and seemed enormous. Most libraries find it burden enough to get any kind of a catalogue. A select list offers the advantage of shortness, to be sure, but the preparation of notes demands another sort of ability from the copying and digesting of titles, and the fancied need of perfection was an insuperable obstacle. However careful the compiler might be, he was sure to lay himself open to criticism: only omniscience knows the best books in every branch of science. The luckless editor might get in among the juveniles a book better suited to mature readers, or declare a novel to be "sensational" which the readers would label "stupid"; he was sure to leave out Mrs. A's favorite poet, or to assign the wrong grade of merit to the history which Mr. B knows by heart. The difficulty of suiting all tastes is well known; in literature more than anything else, to coin a proverb, What's one man's trash is another man's treat. Only a wise foolhardiness could venture to encounter such perils. However, a real need is usually supplied sooner or later. Annotated catalogues we have had now for some time; of classed ones—classed according to the persons for whom they were intended, not by the subjects of the books—a beginning was made, as our readers may remember, at Quincy, Mass., in the last issue of the general catalogue, which contained some short lists of fiction "for boys from eleven to fourteen," "from twelve to sixteen," "from fourteen upward," "for girls from ten to fifteen," "from thirteen upward," etc. This apparently was found a good practice, but not good enough, because the lists were lost in the mass of other matter. Mr. Adams has now gone further and printed an exclusively "Children's book-list," intended for gratuitous distribution in the public schools.

Two numbers have appeared, one of four pages, devoted to "Fiction," "Fairy Tales," and "Historical Fiction"; the other, of three pages, to "Biography," "History," "Science and Natural History," "Travel and Adventure," and "Miscellaneous." We have not been able to get the opinion of youthful readers; to us the list seems unobjectionable, except that Abbott's so-called "Histories" would go quite as well in the class of Historical Romances, and Oliver Optic's books should not go in at all. But on one point we find the doctors disagreeing. Two critics, both of whom have much experience of the practical interworking of the library and the school, declare, the one (librarian) that the list is not a quarter long enough, the other (school teacher in another city) that there are twice as many books as children ought to read.

The first objector will be better satisfied with Mr. Larned's "Books for Young Readers," prepared for the Young Men's Library at Buffalo, a small pamphlet of sixty-three pages, containing about 1,900 titles, divided into sixty-five classes, and grouped in each class into three grades, as being severally adapted—1, to the very youngest readers; 2, to boys and girls of an intermediate age; 3, to young people who are approaching maturity and may profitably begin to share the reading of their elders. Moreover, about a third of the titles have prefixed an *, which leads the eye to the word "Recommended," printed at the bottom of each page. It will be seen that Mr. Larned has undertaken everything except writing notes, and run all risks, and it is plain from some modest words in the preface that he knows the dangers, and thinks it better to do as well as he can and take his chance than to leave so desirable a work undone; a determination for which his young clients ought to thank him. The library has printed enough copies to be able to sell some to other libraries. Trustees could not make a better investment. A large portion of the books in this list must be in every town library, and if the "recommended" books are wanting anywhere, some of them might well be procured.

Some time ago a work of similar character for more advanced readers was undertaken by the American Library Association—an annotated hand-book of good reading, or list of 5,000 titles of the best books in all departments of knowledge—best, that is, for the general reader: 5,000 books which no town library should be without. The selection was to be carefully made and the notes prepared by one editor, but he was to get assistance from every competent person whom he could induce to give him hints or to criticise his work. According to the plan, which was almost utopian, the whole book was to be kept permanently in type, and the best new publications added to the successive editions, room being made for them by dropping titles of such works as were least valuable or seemed obsolescent. This addition would have been a very valuable feature; the leaving out would have been in itself less important, and a work of extreme difficulty. Nor would the gradual growth of such a manual, by an excess of literary births over deaths, have been an evil, provided it did not make the manual too bulky and too costly. This, however, is a question for the editor and the finance manager; it does not concern the public. The plan excited much enthusiasm at the Library Conference held in Boston in 1879. Enough subscribers to guarantee the success of the first edition were readily obtained, the work was put in hand, but nothing has yet appeared, and, till lately, discouraging replies have been returned to the questions of impatient subscribers. We hope that some rumors of renewed activity and approaching publication are to be trusted; for such a work will not only be a guide to the book-buyer and the studious reader, like Appletons' 'Library Manual' and Putnam's 'Best Reading,' and induce a certain number of persons to pursue a very much better course of reading than they would otherwise do, by facilitating their selection of good books, but it might even be used as a library catalogue, at least in some of our newer or our future libraries, and as a supplementary catalogue by older collections, the trustees buying all, or as nearly all as their funds would allow, of the books in the list, and then having an edition struck off with their own book-numbers printed in.

The advantage is obvious. People will read, as we have already said, what is placed before them, especially if it is recommended to them not offensively. A library with 5,000 excellent and interesting books well catalogued under subjects, and 5,000 other inferior books catalogued in the most perfunctory way, and gradually withdrawn as they wore out, would find more and more demand for the better portion, and its circulation would be of much higher quality than that of a library of equal size consisting of ordinary books with an ordinary catalogue. We say nothing of the saving in expense to any library in having so large a part of its catalogue made to its hand—a saving which would outweigh any inconvenience that could arise from the use of two catalogues in the library. Except 'Poole's Index,' no more promising kind of coöperation has been suggested by the Library Association.

ÉDOUARD PAILLERON AND HIS PLAYS.

PARIS, Nov. 16.

THE most successful comedy of the last season was "Le Monde où l'on s'ennuie" of M. Pailleron; and judging by the representations of the piece which are taking place at the present moment, it has a chance of going through a second season. The piece is wonderfully well played at the Théâtre-Français; it is amusing, it is clever, it has parts which remind you of the "Précieuses ridicules," and other parts which remind you of the "Mariage de Figaro." The public sees known personages under some of the names, and naturally delights in these "personalities." The piece is as light as possible, and of the thinnest texture, but it is full of life, of "bons mots," of such words as everybody can repeat in daily intercourse. The chief cause of its success, however, lies perhaps in the fact that by its very lightness, its gayety, its anti-pedantic tendency, it is in contrast with the last pieces of Alexandre Dumas. The long tirades of Dumas, the novelist, the renovator of morals, the serious argumentizer on love, on divorce, on natural children, have fairly tired the public. We have had enough of all these serious analyzers of human passions; of the doctrinaires of the demi-monde, of the *vibrions*, of the fatality of vice, of the heredity of passion, and so on. We have now an old-fashioned comedy in modern costume, in which nobody is profound, and the only people who pretend to be profound are ridiculous and ridiculed; in which love is simple, natural, almost vulgar, and which does not pretend to make new laws for a new world—a commonplace comedy, which keeps us laughing for a few hours, and sends us home contented, not over-fatigued, and gives us the comfortable feeling that we belong to a society which is not rotten, nor absurdly organized, nor threatened with dissolution. A play of Dumas's has always something apocalyptic; M. Pailleron's have no "tendency" whatever—they are mere photographs.

M. Pailleron, who has become very practical and, it may be said, prosaic, began, however, as a poet. His début in the literary world was a volume of verses, 'Les Parasites,' published in 1861. As he was then already twenty-seven years old, he is therefore now forty-seven years old. His verses were satirical; this *bourgeois de Paris*—for he is a son of Paris—attacked the bourgeois class with studied violence. There

was not much sincerity in these attacks; they were a little, as the French say, *voulues*:

"Bourgeois, produit bâtard d'un accès de cynisme,
De la liberté lasse avec la royauté,
. . . . C'est toi qui posas sur le patriotisme
L'étouffoir étouffant de la cupidité!"

There was, perhaps, not much more reality in Pailleron's effusions when he announced the end of war, the political millennium; when he spoke of liberty and fraternity. There was already at that time a part of himself which could judge the other half; there was irony in him even when he played with the great words of the revolutionary school. There was wisdom in his folly; there was also much healthiness concealed under his poetical sufferings. One cannot pity him much when he speaks of his desires, his vague hopes, his ardent dreams.

In 1869 he published a second volume of verses, now forgotten, like the first. 'Amours et Haines' marks no real progress. "La Morte" is the best piece in this volume, and is inferior to the minor poems of our new school. Curiously enough, the best part of M. Pailleron in this new volume is the "bourgeois." As a husband, as a father, he finds natural touches; he has in fact become a bourgeois. He can speak with conviction of the natural emotions of man; he speaks now of love, of conjugal love, of paternal love, with a certain sense of reality. We can only find fault with him for trying at times to say too much; for becoming too eloquent and too communicative.

Pailleron had not found his path as a poet. He was, he is, essentially a dramatist. There is no lyric vein in his cheerful, objective nature. He has the brightness of a mirror; he can reflect the outside world with a wonderful exactitude, but he has none of the characteristics of the poet. His début on the stage was a short act, "Le Parasite," written in 1860 for the Odéon, the Providence of the young dramatist, the second Théâtre-Français. It was an imitation of the "Ciguë" of Augier, in the false Greek style which was for a time the fashion. This style, which originated in the plays of Menander and Plautus, is now quite abandoned. When the "Ciguë" appeared, it was considered as the sign of a reaction of the Classical schools against the Romantic. But the Romantics have it all their own way now. The cleverest imitations of Plautus and Terence are wanting in life, in reality; they are as cold as the classic school of the Empire. In the "Mur mitoyen," written in 1861, Pailleron becomes modern; it is a clever "bluette." "Le Dernier Quartier" (1863) has remained in what is called the repertory of the French Theatre; it is still played as a "lever de rideau." It is in the form which is best suited for Pailleron's talents—clever conversations, not much intrigue, a bit of sentiment mixed up with much Parisian wit—something like a delicate breakfast or a light supper. The "Dernier Quartier" is the last quarter of a honeymoon spent in the country. *Raymond*, the husband, is happy, but so tired of his happiness that he has but one idea, that of returning to Paris in order to see a certain Caroline; he learns in time that Caroline is not faithful to his memory, and becomes reconciled with his wife, who had thought him already unfaithful, and who threatened to separate from him. Can there be anything more ordinary than this subject, more commonplace? It would even be distasteful if *Raymond* was in earnest; but he is not in earnest. The whole thing is a succession of agreeable nothings; it amuses, it makes you laugh; and, strangely enough, at times, it almost moves you.

There are several pieces by Pailleron which have this very light texture. In one, the "Autre Motif," a lady, separated from her husband, and consequently much courted, discourages all her lovers by saying to them at the critical moment, "I am a widow." The adorers invariably run away. The husband dies; a serious lover goes to our lady and reveals his flame. She says again, "Je suis veuve." "I know it," says he. You can imagine the rest: they explain themselves and get married. "L'Étincelle" is often played, and it is impossible to imagine anything better played than it is by the three personages, Delaunay and Mlles. Croizette and Samary. It is again a "proverb," after the fashion of the lightest of Musset's. "Petite Pluie" (1875) and "Pendant le Bal" (1881) belong to the same order of plays: they are "situations" rather than comedies—pictures not of a life or of a year, but of a moment. They are, so to speak, impressions, and, in that sense belong to the modern impressionist school, with this difference, that the impressionist painters care especially for the truth, and Pailleron's truth is as artificial as possible: it is a sort of truth which does not come out of a well, but out of a rich boudoir, furnished in the best fashion. Pailleron has been eminently successful in this *genre*, but he has had a higher ambition—he has tried his hand at the great comedy. He wrote a sort of socialistic drama called "Les Faux Ménages" (in 1869). The "faux ménages" are unions which are neither acknowledged by the church nor by the law; they are the "false marriages" which necessarily are the rivals, the enemies, of real marriage. Such a subject is better fitted for Alexandre Dumas *fils*, who delights in all social maladies. Pailleron's play left on me a rather painful impression, such as you have when you have been without any artistic profit in a very dirty city. It was only a semi-success. "Hélène" (1872) was a total failure. I remember seeing the first representation of it. Pailleron has such a reputation for luck that nobody would believe in a defeat; but the defeat was real, and I confess having completely forgotten this unfortunate *tragédie bourgeoise*.

Pailleron is very intelligent; he understood at once that he had made an error, and he returned to real comedy. He cannot make us cry, but he can make us laugh. "Le Second Mouvement," "Le Monde où l'on s'amuse," "L'Âge ingrat," "Le Monde où l'on s'ennuie," written between 1865 and 1881, mark a great progress. Pailleron has decidedly found his manner: he throws three or four intrigues into one; shows us a sort of quick succession of *tableaux vivants*, not motionless and silent, but full of life, of movement, of animation, of agitation. His men and women all belong to modern Paris; they are, morally speaking, in a perpetual electric light—they live in a sort of irradiation. They may be in love or not in love, young or old, they are always "on the move." The light touches of these pieces are made with a sure hand; there is here and there something coarse, something even vulgar; but vulgarity and coarseness are necessary shades in social pictures. The most delightful feature of these plays is their utter modesty: Pailleron has no object; he evidently does not believe in the "holy mission of the theatre"; he does not mean to alter the "Code Napoléon," to give us a new moral standard. He has left all these ambitions to others; he contents himself with amusing the public. This want of pretension is very refreshing at a time when even the actors and actresses think themselves the regenerators of society; when you hear all sorts of phrases about the mission of art, the mission of the press. The "Monde où l'on s'ennuie" marks the revolt of the Parisian *esprit* against pedantry: it might be called "Les Précieux ridicules."

Correspondence.

THE YALE JUBILEE.

To the Editor of The Nation:

Sir: The account of the New York Yale Jubilee published in the daily papers ought to have shamed every sober graduate of the University. What purported to be a report of the final address was, if not utterly inane, disgusting in abuse of a distinguished friend and benefactor of another university, whose modesty and unexampled generosity are worthy of an ideal New York Yale alumnus. A hope that this reported address might be forgotten as a bibulous "overflow of vulgarity" extemporized at the end of a too convivial jubilee, is destroyed by "A Yale Graduate" in your last number. That his verdict may not stand in your columns as the common verdict of Yale graduates is, I trust, a sufficient excuse for this letter. S. I. Smith.

New Haven, Dec. 2, 1881.

[The most remarkable thing about the "jubilee" was not that college graduates should have produced it. College education does not make a man over, and there will always be a considerable number of university men whose standard of fun does not rise above that of a party of "Bowery bhoys" in a cheap oyster-saloon. The most surprising thing in the performance was that a graduate could have been found who was willing to report his Alma Mater's shame for a newspaper, and publish it as a charming *jeu d'esprit*.—Ed. Nation.]

MRS. DALL'S CALIFORNIAN EXPERIENCE.

To the Editor of The Nation:

Sir: Will you permit me to say in your columns that the "desolation and dreariness" which my cousins turned into "delight" had nothing to do with the charming town of Stockton? I thought I had chaunted the praises of that place with sufficient emphasis. The "desolation" was the desolation of dining-rooms and restaurants all along the way, against which every invalid should be warned. When I saw what your critic said about "volcanic limestone" it seemed to me impossible that I could have used these words without some explanation of the manner in which they came to me, but on referring to the pages I find your critic in the right. At Denver the lovely building stone which attracted my attention was called "sandstone," and I was told it was "bowlder rock," or brought from the neighborhood of that town. None of the guide-books told anything more about it. At Colorado Springs I found it had been used for the college buildings, and I told President Tenney about my perplexity and asked what it was. He replied that it was a "volcanic limestone," which had been used by the Spaniards in Mexico three hundred years ago. It is hard, never crumbles, and will support no vegetation whatever. Several times after this I heard this same adjective applied to the stone. One person said it was a limestone deposited by geysers, but it does not look as if that had happened. I tried to bring a specimen away, but it was too heavy.

Will you allow me to add in this connection that the publication of this volume is teaching me what may be a much-needed lesson in regard to mental perspective? In a volume of 430 pages it is possible that fifteen may be devoted to statements which do not redound to the credit of the fruit, the manners, the food, or the emigrants whom I encountered. I supposed that if I stated things exactly as they happened, I could

not fail to give a true idea of them. I was not in the least annoyed by what I found, but I did not find what I had been told to expect. Should I, in order to produce a proper effect, have held back some of the trivial statements? I expected that critics would be interested in the new things, or perhaps I should say the *untold* things, about the Indians, the Mormons, and the Chinese, but their whole attention seems to be devoted to those which interested me so little that I could not have remembered them if I had not written them down at the time. Is this a fault in me or in the English language, which seems powerless to express what I enjoyed? or is it partly due to the surprise with which readers receive an account at variance with that given by persons who have made the whole journey with free passes? People usually go to California in winter. I went in summer; but it must be remembered that invalids must stay through the summer. In speaking of these things lately to a gentleman of much experience I was met by this inquiry: "We hear nothing but praises of California fruit and Chinese laundries. How is it that you are the first person to disenchant us in regard to both? It is very strange." To this I was able in reply to say what perhaps it is as well that a wider audience should hear:

"If you reflect, you will not think it so strange. The public who gave the reputation to California fruit was a public composed of miners, trappers, and emigrants—men who had been paying five dollars apiece for apples, and who naturally rejoiced over the juicy, though rather tasteless harvest. In the same way, the advent of the Chinese was a great blessing to men who had done their own washing and cooking for years. My own cousins, and many other persons whom I met, had been in California for thirty years. Many of them did not hesitate to say that they had never employed a Chinese servant, and all agreed as to the deficient flavor of the fruit when compared with that of New England."

It would be a comfort to authors if critics could remember that one may correct an error in spelling through six proofs and then have it reappear in the "cast," where it is somewhat difficult to throw it out in season for a first edition. Perhaps a proper system of apprenticeship, or something akin to it, in the printing houses, would be the best remedy for this.

CAROLINE H. DALL.

WASHINGTON, D. C., November 25, 1881.

THE SITE OF HOMERIC TROY.

TO THE EDITOR OF THE NATION:

SIR: The site of Homeric Troy, in spite of the excavations of Dr. Schliemann at Hissarlik, is as much as ever a disputed question among those who believe that the plot of the 'Iliad' rests upon an historic foundation. The topographical explorations which have been made in the Troad establish conclusively enough that there are but two places which can in any measure satisfy the conditions of the Homeric site—Hissarlik and Bunarbashi. There are serious obstacles against the exact identification of either of these places with the Troy of the 'Iliad'; but perhaps, as Grote says (edit. 1869, i., p. 324), "the mistake consists in applying to Homer, and to the Homeric siege of Troy, criticisms which would be perfectly just if brought to bear on the Athenian siege of Syracuse, as described by Thucydides, but which are not more applicable to the epic narrative than they would be to the exploits of Amadis or Orlando."

Professor A. H. Sayce, who is a zealous advocate of the views of Dr. Schliemann, says in his "Notes from Journeys in the Troad and Lycia" (*Journal of Hellenic Studies*, i., page 75 *et seq.*): "If Troy ever existed, it could have only been on the site of Hissarlik. There is no other site, at once so ancient, so commanding, and so conveniently situated near the sea, in the whole of the Troad." Mr. W. J. Stillman, on the other hand, in his interesting letter published in the *Nation* of May 5, 1881, affirms that "there is not an argument which can be brought in favor of Hissarlik which cannot equally be invoked in aid of Bunarbashi," and that "there are, in favor of the latter, many which are directly opposed to the former." Mr. Stillman cites, too, the work of Nicolaïdes on the topography and strategy of the 'Iliad,' and says that in it "the argument is elaborated with what seems to me incontestable success"; and, "with map in hand, every day's fighting is followed, with every personal movement, with an exactitude and consistency which are a curious instance of the observance of the unities in the poem—Bunarbashi being admitted as the site."

It is allowed by the majority of archæologists of note that the so-called "Ilium Novum"—the Hellenic Ilion—was originally an Æolic settlement, which, after shifting its site several times, was finally established in the time of the Lydians—perhaps as late as the reign of Crœsus—at Hissarlik (Professor R. C. Jebb, in the *Journal of Hellenic Studies*, ii., page 7, *et seq.*, "Homeric and Hellenic Ilium"). It is not necessary to repeat here the arguments put forth by Professor Jebb in this important article, both for and against the possibility of identifying the mound of Hissarlik with the Troy of Homer. I will only add that it is established conclusively by Mr. Stillman in his letter to the *Nation*, and by Professor Jebb (at much greater length), in his article above alluded to, "that the belief that Homeric Troy had been utterly destroyed, and that the site had thenceforth remained desolate, formed an essential part of the Trojan legend, not merely in popular Greek rumor, but also in the view of those ancients whose treatment of tradition was more critical"; that in 332–330 B. C., as testified by an oration of Lycurgus, it was commonly believed that the site of Homeric Troy was still desolate, in accordance with the curses of its conquerors, and that consequently the Hellenic Ilion did not stand on the site of Troy.

The question may yet be decided by a more thorough archæological investigation of Hissarlik and Bunarbashi than has heretofore been made. Toward the end of last September three members of the Expedition of the Archæological Institute of America at Assos—Messrs. Diller (the geologist of the Expedition), C. H. Walker, and William C. Lawton—made a summary examination of the Trojan plain, under the kind guidance of Mr. Frank Calvert, the well-known archæologist. Mr. Lawton has written to the president of the Institute a very complete account of this excursion; and some extracts from his letter, relating to Bunarbashi and to Hissarlik, will be read with interest while we await the publication of the full report of the party, with their admirable plans and sketches—several of which are already in the possession of the Institute.

". . . The maximum length of the Acropolis of Bunarbashi, inside the walls, is 190 metres. Von Hahn has run ditches along the outside of all the walls on the western side, and at the eastern gate. He has also traced the whole outer wall of the rectangular building within the exterior fortification. The oldest piece of wall is at the western extremity of the Acropolis; this wall is inclined, built of large, irregular stones, and is evidently the base of a tower. From here to the main gate (at the northwestern corner), the courses are quite regular, and of squared stones. This gateway is so choked with rubbish that further excavations will be necessary to determine its exact plan. Beyond this gate runs from west to east the best surviving piece of Hellenic wall, forming part of the northern wall of the Acropolis. Von Hahn has excavated it to the depth of about two metres, but he has not reached the foundations at any point. Not far from the principal gate, upon this north wall of the Acropolis, are the remains of a second tower, commanding a smaller gate. The foundations of a third tower, resting on the natural rock, can be traced at the northeast corner. The rest of the wall of the Acropolis has not been excavated; but much of it can be followed on the surface. The southern side of the Acropolis retains no indication of having been strongly fortified; but it bears unmistakable remains of terraces, flights of steps cut in the rock, and house walls—which last may have afforded sufficient protection, as this side of the hill is almost inaccessible from below. At the eastern end the natural rock crops up frequently, but toward the southwest the accumulation of earth appears to be great. The large rectangular building about the middle of the Acropolis has never been excavated inside. The two adjacent circular structures on the lower plateau, just within the exterior fortification wall on the west, have been excavated to the depth of half a metre, by Von Hahn, at their point of tangency. They now consist merely of light stone walls, with a slight depression within. The remains of the fortification wall, which is so completely ruined as to resemble nothing more than a low earthwork, extend in a direction 20° west of north, across the neck which connects the rocky projection forming the Acropolis with the heights behind. This wall can be traced for a distance of 130 metres.

"On the next ridge to the southwest of Bunarbashi, Mr. Calvert has opened graves made in scanty earth, between the outcropping rocks, and discovered in them large jars like those found at Hissarlik, containing skeletons, and, often, Hellenic vases. There are, also, slight traces here of prehistoric walls. From this ridge the line of the Dardanelles is visible, and the stately peak of Samothrakê looms up over Imbros.

"Along the edge of the northern ridge of the Acropolis, as it descends toward the northwest, are many tumuli consisting of heaps of stones. Attentive study reveals, in several of these, traces of walls—probably house-walls.

"Here all signs of human life end. The long, gentle slope of nearly a mile, descending toward the village of Bunarbashi, is dotted with the outcrops of native rock; gravel occurs, but there is no trace of walls nor of pottery in the earth. This whole space must be imagined encircled by walls, if we attempt to apply Homer's description to this spot; for the Scæan gate certainly opened on the plain. A prehistoric city of so great size has never yet, I think, been found. Such an arrangement would, it is true, give room enough for the 7,000 or 8,000 Trojan citizens under arms ('Iliad,' ii., 123–131), and their 40,000 guest allies ('Iliad,' viii., 562–3); but I can more easily believe with Thucydides, that 'Homer exaggerates, as poets naturally do.' [This difficulty regarding the size of the ancient city is raised also by Professor Sayce, in his article above referred to: "The scholars of the last century, believing as they did that the Troy of Homer was like one of the great cities of Europe, naturally fixed upon the heights of Bunarbashi as realizing their ideal. Here we have a large-sized hill, or rather the last spur of the range of Ida, which would have embraced within its circumference a city as large as Edinburgh, and needs a long and weary climb to scale its summit."]

"On September 21 we visited Hissarlik. It is the dreariest spot in the world; the only rest for

the eye is in the lines of Greek wall along the upper part of the trenches. Mr. Calvert thinks that Dr. Schliemann now regrets the reckless way in which Hellenic remains were buried deep under the earth from his trenches. In fact, Mr. Calvert says that the Doctor intends to dig for the other metopes of the Apollo temple, of which one, bearing a striking relief of four horses advancing directly toward the spectator, was found by accident half a metre below the surface.

"The amount of work which has been done at Hissarlik is enormous. The heart of a great hill has been cut out. The strongest impression one has is of the squalor and pettiness of the flimsy walls of the 'Burnt City,' compared with the Ilios of the poet. His dullest line has more life in it than all these stones and dirt. There are lying about striking marble fragments from Hellenic temples; one, in particular, is a block bearing a triglyph and a metope representing the issue of a single combat. The figure of the slayer is much broken and weathered away. The prostrate man, according to Mr. Walker, wears Persian trousers. Before the little church of Kalifatli is a well-preserved Ionic capital; and within is a mosaic pavement from Hissarlik containing Europa and the Bull, a lion, and other subjects.

"From Hissarlik, Gargaros is in sight, but at a great distance. Tenedos is plainly seen, and is quite prominent enough to hide a large fleet. Samothrakê—the watch-tower of Poseidon—rises majestically above the reddish-brown slopes of Imbros.

"September 22 was spent in an unsuccessful search for evidence as to the alleged building out of the shore-line since Priam's—or Homer's—day. It is clear that Sigeion, Hissarlik, and Rhoiteion are the extremities of three surviving remnants of a general plateau in which the valleys of the Mendere and Doumbrek have been scooped out by the action of water. It is equally clear that the present surface of the plain is alluvial. The weight of evidence is against any such rapid extension of the shore-line as Strabo claims. The most satisfactory evidence would be the discovery near the present shore-line of some human monument of undoubted antiquity. Mr. Diller saw upon the low peninsula of Koum-Kaleh some small projecting bits of limestone, which make it probable that it has a solid foundation of rock. If, however, as Virchow says, it is a mere sand-spit, it may very well be of recent formation. The forces of river and strait are now in approximate equilibrium, and very little change of shore-line is in progress."

I am, sir, yours very respectfully,

THOMAS W. LUDLOW.

No. 244 East Thirteenth Street, New York, November 28, 1881.

THE POST-OFFICE DEPARTMENT ADVANCING BACKWARD.

To the Editor of The Nation:

Sir: One of the most astonishing things connected with the history of the Post-office Department is the silent manner in which the wholesale eradication, by the present Postmaster-General, of long-established postal routes has been received. It can be accounted for in a great measure by the fact that it was regarded as a blow at the huge swindles of the Star-route gang, and this to some extent it may have been. But Mr. James, in his sweeping and ill-considered measure, has cut off the innocent with the guilty, and the brunt of the punishment has fallen on an undeserving public.

When you consider how important at the present day is the receipt of a mail to the husbandman residing in any part of this busy country, how essential it is, not only as an assistance to his maintenance, but as a solace to his hours of rest; that it is to him what the opera and other amusements are to the denizen of the cities, you can begin to appreciate the deprivation sustained. But the slaughter has been by no means confined to the husbandman; the village and country merchant, the stock-raiser and trader, to whom daily market reports are as relatively essential as to the city merchant, are equal sufferers.

By the Postmaster-General's order, at one blow, mail facilities, extending over thousands of miles, that existed before the birth of men now past middle age, have been destroyed, or materially impaired; and while this curtailment of the barest necessary mail has been going on in the rural districts, the city people have had their mails brought to their very doors twice or more each day, and that at a cost far exceeding a fair compensation for carrying all the mails on the discontinued Star-routes.

Do not understand me as condemning the city delivery. I allude to it to show how glaring is the injustice done to the countrymen. The injury inflicted on the business of the whole country is much greater than the unreflecting would suppose, and the injury, particularly to the newspaper interest, is so marked and so direct that I am surprised at the long-continued silence of the press.

I unfortunately live on a Star-route that was blessed with a daily mail forty years ago, now reduced to three mails a week. This route is over a superb road thirty-five miles in length, connecting railroad towns and through a country teeming with wealth. It is the only supply to six post-offices, and contributes to three others. That our route was punished for participating in Star-route frauds cannot be said. On the contrary, it stubbornly set its face against the effort to "expedite" its mails. Two mails a day were actually ordered when expediting was at its zenith; but there being no connections at the termini, the general ridicule on the whole route was too great for the gang, and the fraudulent attempt was reluctantly abandoned. Soon thereafter the carrier concluded to leave his place of departure a half-hour before the arrival of the mails he had undertaken to carry. The result was that our mails were unnecessarily delayed twenty-four hours. Detrimental as this palpable breach of contract was to the public service, the most persistent efforts for many months could obtain no redress. After the meeting of Congress, our Representative took the matter in hand, and the wrong was at once righted. Hardly was this adjusted when our delivery was reduced, as before stated, to three times a week. That we have been made to suffer by some official for not assisting in the expediting project is reasonably certain, but that Mr. James has had such a motive is not for a moment believed. If, however, Mr. James could hear the execrations heaped on his name all over the country, it would doubtless astonish him, and might perhaps be of more real benefit than the plaudits he has been the recipient of, for his endeavors to make the Department self-sustaining.

Could not the *Nation* bring to the attention of those in authority the fact that a self-supporting mail department is not an unmixed blessing; that the two-cent postage, instead of the present rate, is not a burning desire, but that a decent regard for the rights of that vast majority of our people who dwell neither in cities nor on railroads, would be of more benefit to the country at large than either of these reforms; and that the memory of the man who should establish a permanent system that would bring a daily mail within the reach of every inhabitant, where at all practicable, would be cherished with more respect than that of Sir Rowland Hill? A Subscriber.

Central Kentucky, November 28, 1881.

OVERLAND RAILROAD RATES.

To the Editor of The Nation:

Sir: Since the publication of my letter on overland railroad rates in the *Nation* of August 11, Mr. Charles F. Adams, Jr., has called my attention to the origin of the system of special freight contracts and unlawful discrimination in freight charges, as set forth in the report of the Government directors of the Union Pacific Railroad for the year ending June 30, 1878. I quote from page 15 of the document:

"In the month of July last, a sudden announcement was made that the tariffs on through-freighting business over the Pacific roads had been altered, and that, while the classification of certain articles had been changed, the rates upon others had been advanced from 50 to 100 per cent. The reason of this movement, which naturally excited surprise as well as indignation among those affected by it, was not at first apparent. It was, however, soon learned. It was purely strategic. The company did not really propose to raise its tariff rates; on the contrary, it was ready to slightly reduce them; but it did propose to take full advantage of its position to secure as much as possible of the transcontinental business. As a first step toward this, it practically did away with its open tariff, by the very simple process referred to. Under the open tariff, at the old rates, the larger business firms dealing between the two coasts had a choice of routes—that by water and that by rail. They, in practice, availed themselves of this option by sending their coarser freights, or those in regard to which time in delivery was immaterial, by water, at the lower rates; while the more costly wares, or those requiring immediate delivery, were forwarded overland. The object of the Union Pacific was to put a stop to this practice. This they did by largely raising their freights, which put an effectual stop to shipments under the open tariff, while, at the same time, they offered to all the large firms which would contract to make their shipments wholly by land, special rates at a reduction even from those in force before the change. It was thus a distinct step backward; for it amounted to the abandonment of a published and open tariff in favor of a system of private special contracts.

"This move was, therefore, not only one of great importance, but it was open to serious objections. It was made, not by a petty local road, nor by a competing trunk line, but by a great, subsidized, continental thoroughfare. As such, it might naturally be inferred that it was made only after ample consideration, and with the authority of the full board of directors. It is, however, a fact singularly illustrative of the absence of that sense of public responsibility in which the policy of the Union Pacific is now shaped, that this measure, which practically put in irons the transcontinental business of the country, was devised by two freight agents, was never, before being publicly announced, submitted for consideration even to the executive committee of the board of directors, much less to the full board, and was finally put in force, to the utter surprise of the public, on the verbal authority, so far as can be ascertained, of the president and a single director.

"It is unnecessary to comment on such a method of corporate management. It speaks for itself. Meanwhile, so far as the measure is concerned, the objections to it are apparent. The through-business over the Union Pacific is mainly done by large houses. This is natural enough, for such houses can, of course, do it most cheaply. The measure under discussion, however, made it impossible that this business should be done by any but the large houses. They have special contracts covering it at less than the published tariff rates. More than this, it locks up, in secrecy, transactions which more than all others should be public. The special contracts may be equal as between shippers, or they may not. The directors have every reason to believe that they are, but they none the less are lacking in that element of publicity which in such matters will always remain the one real safeguard against discrimination."

The contracts here referred to and so justly condemned did not contain the "boycotting" clause quoted in my former letter; they merely bound the merchant to transport all his freight by rail—viz.: "all goods purchased by or for

and shipped by or consigned to him by his procurement, directly or indirectly, or with his previous knowledge or consent"; he was still free to deal in goods which had reached here by sea, though he could not import them so himself. Next year or the year following, the "bought, sold, dealt in, or handled by" clause was introduced, which "boycotted" all goods not imported by rail, so far as the railroad companies' customers were concerned. They were forbidden to buy, sell, deal in, or handle them. Last January the railroad companies gave another turn to the screw, and introduced a clause which boycotts not only the goods, but the importers. The merchant who holds a freight contract with this company is "firmly bound" not to sell or deliver his goods to any one who is in the habit of importing otherwise than by rail. To show that there is no mistake about this humiliating exaction, I enclose on a separate slip the text of the covenant, as well as that of the corresponding clause in the contracts of the preceding year. They are clipped from the columns of the *Grocer and Country Merchant*, a local trade journal which published them, with a vigorous protest, at the time they were forced upon our merchants. The space of the *Nation* is too valuable to insert them *in extenso* here; but let them go into your advertising columns with a note of reference. They divide the importing merchants of the whole Pacific coast into two classes—viz., those who bind themselves to import exclusively by rail and those who refuse to do so; *these two classes are forbidden by the railroad company to have any dealings with one another.*

I make no comment on this proceeding, for I have no language equal to it; but I hope that the *Nation* will do so, for I have reason to believe that it will not be without effect. I pass to another item of railroad management.

Sugar refining was introduced here in 1855, and soon grew to be a large and important industry. Even paying duty on raw stocks imported from Manila, it was found possible to manufacture here at a profit, and compete with Eastern goods to the extent of the refined sugars and syrups consumed on this coast. The price was of course regulated by the cost of laying down New York sugars here. The Hawaiian treaty removed the duty from our raw stocks, and gave our refiners a clear advantage of two and a half cents per pound over their Eastern rivals. Still, Eastern crushed sugar had a slight preference, and could always be found in our market and at substantially the same price as domestic. Last January all this suddenly changed, and Eastern sugars disappeared from the market. The reason assigned was that the railroad companies had raised the freight on refined sugar from one cent per pound to two—a rate which forbade importations. The reader may be surprised that they should thus impose a protective duty (for that is evidently what it is) so high as to cut off their own revenue from the trade; but, though strong protectionists, they are not such fools as that. It now comes out that they received a full consideration for their action. The *Chronicle* of this city has brought out the fact, and it is uncontradicted, that the advance in freight is the result of a bargain with the principal refiner here, thinly disguised under the form of a transportation contract,* whereby, for a consideration of $100,000, they consent to impose this prohibitory duty on Eastern sugars for the current year. The *Chronicle* publishes statistics of sugar imported from the islands, etc., to show that through the operation of the treaty the Government loses about two million dollars per annum, while by the action of the railroad companies the people of this coast are mulcted about eight hundred thousand more in the enhanced cost of sugar. Its attack is mainly on the treaty and the refiner. Papers in the opposite interest defend the action of the railroad companies by the usual protectionist arguments, encouragement of home industry, etc. The whole public is, however, as it seems to me, more interested in a question back of this, and which I venture to think lies at the bottom of the whole railroad problem—viz.: *What right has any railroad company to impose a protective duty on sugar or any other commodity imported from one State into another?* And what is the system of classification adopted by all our railroad companies as the basis of freight charges, but a system of protective duties under another name? The overland companies, by their scandalous imposition of this duty on sugar, have brought this question squarely to the front, and incidentally suggested the true remedy for such abuses. The latter, if you will permit, I should like to discuss hereafter.

JOHN S. DOYLE.

SAN FRANCISCO, November 23, 1881.

* The transaction is alleged to be in the shape of a contract to transport for the refiner 5,000,000 lbs. of sugar at two cents per lb. Of course they could not charge any dealer a less rate than that voluntarily paid by so large a customer, who pays his freight and is not at all particular as to the transportation of the goods!

Notes.

WE understand that the American subscription to the proposed monument to Severn, the friend of Keats, has not equalled expectations. The time for closing it is near at hand. Mr. R. W. Gilder, of the Century Company, Union Square, New York, will receive and forward any sums. ——A. D. F. Randolph & Co. announce a compilation by Wm. Oland Bourne, 'Now I Lay Me Down to Sleep; or, The Prayer of Childhood in Literature and Song.'——We learn from the *Academy* that Mr. W. M. Conway, 2 Harcourt Buildings, Temple, London, E. C., proposes to issue by subscription a series of photographic reproductions of the earliest works of wood-cutting in the Netherlands, the so-called block-books, which usher in the art of printing. Some twenty-eight are embraced in Mr. Conway's scheme. Yearly or half-yearly volumes will be issued, with explanatory pamphlets, at cost price—say, from twelve to twenty-one shillings per volume.——The fifteenth annual exhibition of the American Water Color Society will open at the Academy of Design, on January 30, 1882, and close on Feb. 25. Works will be received from January 12 to 14. The secretary's address is 51 West 10th Street.——The *Sanitary Engineer*, which began as a monthly, and has latterly been a fortnightly publication, will enter upon its fifth volume as a weekly, a step which implies gratifying evidence to its conductors that their efforts have been appreciated. ——In a memoir of the late Benjamin Peirce, published in the current Essex Institute Hist. Coll. (xviii., 7, 8, 9), the striking fact is exhibited that this eminent scientist "had no less than twenty-five ancestors, heads of families, known to have been settled in New England before 1663, at least twenty of them before 1640." One of these was Lawrence Southwick, husband of the Cassandra celebrated in Whittier's verse. ——Readers of "A Colonial Monastery," in the December *Scribner's*, will be interested in Mr. S. W. Pennypacker's account of the Dunker Book of Martyrs, 'Der blutige Schau-Platz oder Martyrer Spiegel der Tauffs-Gesinten oder wehrlosen Christen, etc. Ephrata in Pensylvanien, Drucks und Verlags der Bruederschafft anno 1748'—"a massive folio of 1,512 pages," now extremely scarce. "Among the literary achievements of the Germans of Pennsylvania it surpasses, though eight (*sic*) years later, the great quarto Bible of Saur, the first in America, printed at Germantown in 1743, which for nearly half a century had no English rival." ——The Christmas number of the *Publishers' Weekly* is a picture-book in itself, apart from its utility as a guide to holiday purchases for young and old.——Among the characteristic publications of this season is Lockwood, Brooks & Co.'s "American Poets' Calendar" for 1882, with quotations for every day in the year.——A very tasteful pamphlet report of the Exeter Hall meeting commemorative of President Garfield has been issued, with a fine portrait, by Mr. B. F. Stevens, 4 Trafalgar Square, London. ——In *Le Livre* for November, English readers will at once be attracted to M. Ernest Chesneau's amiable but not very profound or well-proportioned review of English caricature. Facsimiles, after Hogarth, Rowlandson, John Leech, and Kate Greenaway, adorn the text. In his letter from Brussels, M. Léon Degeorge announces that a complete but very brief and ill-printed catalogue of the Plantin Museum has been published by the curator. He well says that, under the circumstances, a work of art was called for.——Parts 27, 28 of 'Stieler's Hand-Atlas' (Westermann) contain a railway and steamship map of the German Empire and adjacent countries, with political maps of Austria-Hungary, India, and Central Asia, Persia and Afghanistan, and of South America (quite new), together with a chart of the globe's winds, currents, and rainfall. The edition is now nearly complete.——Dr. Oscar Lenz's journey from Tangier to Timbuctoo and Senegambia, and General Schindler's journeys in Southern Persia in 1879, are described, with accompanying maps, in Nos. 94-95 of the Journal of the Berlin Geographical Society (L. W. Schmidt).——Prof. G. Ebers seems to have found novel-writing a more desirable task than the completion of his 'Egypt and the Pentateuch,' the first volume of which was published in 1868 and the second is still to come. A second edition of his book of travels, 'Durch Gosen zum Sinai,' is announced; but at the same time a new novel from his pen is issued, 'Die Frau Bürgermeisterin' (The Mayor's Wife), which presumably deals with matters less Egyptological than his previous contributions to light literature.

—In Dr. Hayes's reprint of his 'Pictures of Arctic Travel' (Carleton), we have, not a narrative of travel, but three pen-pictures of humanity and nature as they presented themselves to him in Greenland. Of the three, that which has for its subject the glaciers is by all odds the best. The topic will bear a good many superlatives without producing the effect of incongruity, and its treatment here seems to be natural and fitting. The "Doctor" is very unreal in appearance, whatever be the foundation of fact in the episode suggesting it, and the "Savage" is too weakly sketched to make any very definite impression. The little book is beautifully printed, with a striking if somewhat inartistic cover, whose designer should apply to some sailor-man for a lesson on knots.—— In the number of the *Nation* for July 28, 1881, the requisites for a useful handbook of astronomy for amateurs were pointed out, with particular reference to a new edition of Smyth's 'Celestial Cycle,' which had recently appeared. It was there stated as the opinion of the writer that the 'Celestial Objects' of the Rev. T. W. Webb was a work admirably adapted to the end proposed, and of small bulk and low price. These remarks were based on the third edition of Mr. Webb's work, which had been long and favorably known. Since that time a fourth edition has been printed in England and in New York (Industrial Publication Company). An examination of this edition shows it to be an improvement upon its predecessor.

The chief changes have been made in the addition of some 1,500 new objects to the lists given in the third edition, and in a thorough revision of the text. As far as we have seen, these additions are extremely well chosen, and the list of interesting objects given at the end of the work covers nearly all those which "common telescopes" can be advantageously used upon. Many of these objects have been personally examined by Mr. Webb himself, and in other cases his notes are from the original sources. The practical instructions are especially valuable to the amateur. The whole character of the work can be summed up in one word: it is eminently judicious; and this quality gives it a weight not usually belonging to works of its class. It is one of the few books which no observer, amateur or professional, can well afford to dispense with.——*Scribner's Magazine* has now its 'General Index' (Q. P. Index, Bangor, Me.), on the plan of its immediate predecessors. The 'Annual Q. P. Index,' which we have already described, is announced on a fly-leaf for January 15.——The Rev. George E. Merrill's 'Story of the Manuscripts' (Boston: D. Lothrop & Co.) gives a clear and interesting account of the most important manuscript copies of the New Testament, their age so far as known, their characteristics, the ways of their making and preservation, and the discovery of those not known till recently—this last being what we may call the romance and adventure of Biblical criticism. It has several engraved illustrations, brief biographies, and a good index. Not claiming any critical authority, it is not a legitimate subject of criticism as to its assertions on points doubtful. Its information on matters of known fact is timely and accurate. It says a good word for the Revised Version. Its point of view is given in the following sentence: "All the writings of the New Testament were completed, and in possession of the churches, at the close of the first century"; which is given without qualification or remark.

—The annual report of the Board of Visitors of the University of Virginia for the last academic year shows that, since the war, private benefactions to that institution have amounted to $440,000, a sum exceeding by $110,000 the whole amount of annuities paid to it by the State since 1865. It thus appears that Mr. Jefferson's hope of promoting the higher education through a combination of public and private munificence has been practically realized. The "Leander McCormick Observatory" is now in process of erection upon the mountain-site originally selected for astronomical observation by the "Father of the University."——The annual report of Acting-President Frieze to the Board of Regents of the University of Michigan is largely taken up with his favorite scheme of making the end of the Sophomore Year in the Literary Department a point of departure for the various University courses in science, medicine, political science (a newly established school), etc. The question is, we believe, one on which the Faculty have divided with a good deal of feeling, and President Frieze foresees that the East will criticise his proposal as tending to lower standards of professional training and of University degrees (which his system would award after five years' residence at the University). More or less openly, the report is a protest against the applicability of Harvard's standards for post-graduate matriculation to the University of a frontier, new, and sparsely-settled State. ——The Board of Trustees of Columbia College, last May, adopted a scheme reorganizing the instruction in modern languages, and supplementing the undergraduate course with a post-graduate course of two years. This is now being put in execution by Prof. Charles Sprague Smith.

—The following note appears in *Potter's American Monthly* for December. That the editor (to say nothing of the contributor and his integrity) should never have encountered Mr. Hale's famous little story, is an amusing proof of the distance which separates Boston from Philadelphia:

"'A Man without a Country.' The above article is furnished us by one of our contributors, who translated it from the German. *Never having seen the article in print before in this country*, he requests its publication for the benefit of those of our readers who also may never have heard or known of the facts stated. The name of the author is not furnished."

—Akin to the topic which we have discussed elsewhere, as to furnishing the young and unlettered with proper guides to the use of our public libraries, is the need of supplementing the serious part of our lyceum courses with suggestions for private study and investigation in the lines in which an interest has been awakened. An example of a short, well-selected bibliography of this sort has just been afforded by the Peabody Institute, of Baltimore, which has published a fly-leaf indicating "a short course of reading in connection with Mr. Freeman's lectures on the English people in their three homes." To the books enumerated is appended a sign of their being procurable at the Peabody, Johns Hopkins, Mercantile, and Maryland Historical Society libraries. The list is annotated to some extent, and does not err by formidable excess of citations. We hope to see this become a regular feature of the Peabody Institute's lecture courses, and receive the flattery of imitation by the Lowell Institute in Boston, and by all other established courses of the higher grade. Apropos of Dr. Freeman, we have heard the wish expressed that he might abandon his written lectures in favor of free and informal talks with his audiences.

—It is a pleasure to be able once in a while to say a good word for Mr. Mapleson's performances at the Academy of Music. The famous manager may be looked upon as a sort of æsthetic chemist, who gathers his heterogeneous artistic materials from all parts of the globe, mixes them in various proportions, and then ascertains how a New York audience will "react" on the compound. Occasionally, when the mixture is not of the proper sort, the reaction consists in a gradual evacuation of the auditorium before the end of the performance, as on Monday week, when "William Tell" was given. In the performance of "Aïda," however, on the following Wednesday, the vocal material was of excellent quality, and the result was that a large and fascinated audience remained until the last note had been sung, a few minutes before midnight. Verdi's "Aïda" is not only dramatically but musically the queen of all Italian operas, and in listening to it as interpreted by such artists as Galassi, Campanini, and Mlle. Rossini, the audience gets an idea of what an operatic performance on the Continent of Europe is like. If Mlle. Rossini had appeared earlier in the season, several other débutantes, the public, and the critics might have been spared the mutual annoyance of making each other's acquaintance. Now that she is here, we hope she may be given every possible opportunity during the remaining three weeks of the opera season of renewing her triumph in "Aïda." Mlle. Rossini's tones are of good quality, their color being neither too dull nor of too great metallic brilliancy, and if she could only get rid of her everlasting vibrato, which occasionally makes an actual trill of what should be a smooth note, she would rank among leading *prime donne*—provided, that is, she is able to make as favorable an impression in other rôles as in that of *Aïda*. Her dramatic conception of the part is likewise of more than average merit, although it cannot be denied that she could still benefit greatly by seeing that character as impersonated by Materna, the greatest living dramatic vocalist of her sex. Mlle. Cobianchi, who also made her début on the same occasion, is another useful addition to Mr. Mapleson's company, and might advantageously take the places in some operas of several of her predecessors. Galassi was as good an *Amonasro* as we have ever seen, and Campanini sang beautifully. It is his misfortune that he does not look like an artist, and that his acting is so imperfect that he never allows one to forget that he is Campanini, the lyric tenor. An important feature in "Aïda" is the ballet, which did some very creditable work, especially in the tableaux, which were formed more instantaneously and in better order than usual by the girls, while the black slave boys were even obliged to repeat their comic evolutions. Signor Arditi again proved his special sympathy for Verdi's opera by the good control he had secured of the orchestra, the chorus, and the brass band on the stage, whose several performances were better dovetailed than usual. "Aïda" is in many parts a diluted and simplified "Lohengrin." It is brimful of fresh and delightful melodies, whose quaint, exotic intervals afford a pleasant contrast to the orthodox forms of Italian and German melody. Signor Arditi's orchestra does not contain such good material as some other orchestras in the city, but in "Aïda" it succeeded in making a charming display of the brilliant hues produced by the alternation and varied combinations of string, wood-wind, and brass instruments. In introducing these changes in orchestral coloring Verdi was not guided, like Meyerbeer, by a mere desire for change and effect, but by a true dramatic instinct, which enabled him to find in each case that clang-tint which best harmonizes with the dramatic situation.

—The first piece on the programme of the Symphony Society last Saturday was Schubert's Quintet, op. 163, arranged for full orchestra by Dr. Damrosch. There has been so much said of late about the possible existence of a tenth symphony by Schubert that, had it not been announced that the present arrangement was made last summer, Dr. Damrosch would have subjected himself to the suspicion of trying to show that if the tenth symphony in question did not exist, it was easy enough to make one. Even those who may not have agreed with Dr. Damrosch's opinion that the quintet needs more than five instruments to display all its innate beauties, evidently felt grateful to him for making the experiment. At least the applause was very generous, and the conductor was recalled several times to bow his acknowledgments. Schubert was one of the greatest of all the masters of orchestration; and although he would very probably in many places have chosen different instrumental combinations from those heard on Saturday, others are so thoroughly in harmony with the character of the passage that it seems as if no other instruments could have equally well expressed it. Even if the experiment had not proved a success, there would have been no harm in it. A string quintet bears the same relation to an orchestral piece that a simple sketch does to an oil painting. If an artist should take an original sketch by a great master and paint it, the act would be justly looked upon as vandalism; but Dr. Damrosch's orchestral arrangement leaves the original quintet exactly as it was; and fastidious musicians who are apt to prefer a sketch to a full painting may still go on playing it as if the new version had never existed. The people as a whole will prefer the orchestral arrangement; and as it was Dr. Damrosch's aim to popularize the composition, his object was clearly attained. Saint-Saëns's fourth concerto for the piano, op,

44, followed as the second piece. Like the typical concerto of the Mozartean period, it has a short orchestral introduction before the piano enters; but in its general form it differs from the regular concerto very much as symphonic poems do from symphonies. The movements are fewer in number or more closely connected, and, what is particularly commendable, the whole composition is much shorter. Saint-Saëns never tires the hearer by diffuse thematic treatment. He puts his ideas in their most direct and effective form, and never before he has carefully cut and polished them. This, combined with his thorough knowledge of all orchestral resources, constitutes the principal charm of his compositions. The piano part of the new concerto in the hands of Madame Schiller seemed to lack brilliancy and importance; and we happen to know that when played by the composer himself it is exceedingly sparkling and effective. Two Norwegian melodies for string orchestra, by Grieg, were charmingly played by the orchestra and gratefully received, especially the second. The peculiar northern flavor which pervades some of Grieg's other works is not conspicuous in these songs, which might have flowed from the pen of any German musician. Beethoven's Eighth Symphony brought the concert to a close.

GARFIELD'S WORDS.

Garfield's Words: Suggestive Passages from the Public and Private Writings of James Abram Garfield. Compiled by William Ralston Balch. Boston: Houghton, Mifflin & Co. 1881.

DURING the last Presidential campaign a small volume of extracts from General Garfield's speeches was compiled as a sort of campaign document, but it never had any great success, and it is hardly likely that Mr. Balch's collection will attract much more attention. He has endeavored to select from the late President's speeches, addresses, arguments, and letters the most characteristic and interesting or epigrammatic and pithy phrases or passages. The difficulty that we feel in looking over the volume is that General Garfield had not sufficient conciseness or epigrammatic point of expression to make such a selection of any particular value. Epigram is hardly possible without wit, and General Garfield was not a witty man. Moral and political ideas may of course be expressed with a sententious force which will take the place of wit, but General Garfield had not, properly speaking, a gift of sententious expression. Originality of thought may often supply the place of both these, but he does not seem to have had, to judge from the volume before us, much originality of mind. A great many of the extracts given were no doubt impressive when first delivered; but examined in print, and judged, as they necessarily must be, by literary standards, their impressiveness disappears. "God reigns, and the Government at Washington still lives," is almost the only expression used by him which can be properly said to have taken root in the popular heart. "I would rather be beaten in Right than succeed in Wrong" is merely a new form of an old idea; as is also: "There are some things I am afraid of, and I confess it in this great presence—I am afraid to do a mean thing"; and "It is cheaper to reduce crime than to build jails." Under the head of "Character" Mr. Balch gives a number of sayings which, taken together, show, what we should have known without them, that General Garfield placed a high value upon character; but there is nothing in them which indicates any originality of view, or delicacy of observation, or novelty of idea with regard to it. Many of the sayings are platitudes, which it was hardly worth while to reproduce, announced with a characteristic enthusiasm that, at the time of their utterance, may have saved them from seeming so. Most of the extracts relate to public life, political questions, or topics connected in some way with these. And here again, while the extracts possess a certain value from the evident conviction and elevation of aim which lay behind them, they express nothing which cannot be found elsewhere in other forms. General Garfield's merits as a lawyer, a politician, or an orator are not to be tested by any such ephemeral collection as this. His strength did not lie in isolated phrases or sayings, and his efforts in any direction have to be judged as a whole rather than in their parts. In this he resembles most successful public men.

It is perhaps yet too soon to attempt to form any final opinion as to the precise position which the late President will occupy in the history of American public life. The tragic end of his life brought his career, his character, and his private life into such a glare of publicity that his individuality at the end underwent a sort of metamorphosis in the minds of a large part of the general public. This glare now casts back a reflected light upon his earlier career, and makes it seem somewhat different from what it would have been had his Presidency terminated in a natural manner. The interest taken in his sufferings by foreign nations, and the discussion of his character and public services which this interest occasioned, gave to the feeling about him in his own country for the time being a somewhat new color. This was not so marked, perhaps, as it was twenty years before in the case of Lincoln, because with him European opinion in many cases passed from an extreme of something very like contempt to the opposite pole of obituary adulation. Lincoln the awkward, ungainly, backwoods rail-splitter, became Lincoln the martyr, the wise and far-seeing statesman. The causes which produced the revulsion of feeling in regard to him in Europe were so obviously connected with the success of the North in the Rebellion, that European admiration of him, when it at length came, did not produce a profound impression on this side of the Atlantic. It was accepted here as a tribute of respect which we had all fought for and won; and the bitterness of the struggle, while it gave a peculiar sweetness to the enjoyment of this as well as all its other results, left behind it in the national memory an irritation against foreign critics and observers which made us feel, for the time being, superior to the very criticism we most keenly cared for.

All this was entirely different in the case of General Garfield. In the satisfaction of having the President of the country suddenly become the object of the respectful sympathy of the press, the public, and the governments of Europe there was absolutely no alloy. It was felt to be spontaneous, and not offered as a salve for previous injuries. It seemed to give a new importance to its object, while at the same time it somewhat affected the atmosphere through which we regarded that object. General Garfield, as he appeared in English eyes, was necessarily different from the purely American Garfield as we knew him. To the English imagination he was a public man such as they know public men to be—an American Gladstone, or Bright, or Cobden—a sort of combination of British premier and Republican elective sovereign. This called for less imaginative effort in his case than would have been required with regard to most of our politicians, because General Garfield had won his way up to the Presidency by a parliamentary life, and his success was founded in great measure on readiness in debate and familiarity with public questions. To a certain extent, in our appreciation of the foreign sympathy lavished upon us, we fell into this foreign view ourselves, and for the time being General Garfield acquired a sort of new Anglo-American individuality. The idea of making a collection of his "words" seems like a legacy from this period. But an American Congressional career is, after all, at bottom very different from an English Parliamentary career, and in nothing more different than the small scope the former gives to wit, epigram, or pointed rhetoric of any kind. It really stifles rather than encourages it; and if General Garfield's long public service had made him a successful producer of brilliant phrases or memorable sayings, he would have been almost a *lusus naturæ*.

SCANDINAVIAN TRAVEL.

The Land of the Midnight Sun. Summer and Winter Journeys through Sweden, Norway, Lapland, and Northern Finland. By Paul B. Du Chaillu. With map and 235 illustrations. New York: Harper & Bros. 2 vols. 8vo.

Norsk, Lapp, and Finn. By Frank Vincent, jr. New York: G. P. Putnam's Sons. 8vo.

The Story of a Scandinavian Summer. By Katharine E. Tyler. New York: G. P. Putnam's Sons. 8vo.

PAUL DU CHAILLU has produced a magnificent work, eclipsing all his predecessors who have written about the Scandinavian Peninsula. What first strikes one is the elegant appearance of the volumes, and the excellent map and engravings. The latter, 235 in number, are mostly (the portraits entirely) from photographs taken exclusively for use in this work. Those representing winter scenes in Lapland are the work of the Swedish artist, M. Bergman, who has visited that country. It would be difficult to show wherein the illustrations could be improved, and they alone are well worth the price of the book. While the majority of the works of this class have been written by persons who had no preparation for the task, who were utterly ignorant of the languages and dialects spoken in the north of Europe, and whose sojourn was too brief to repair this defect, M. Du Chaillu made a series of journeys at different times from 1871 to 1878, and spent nearly five years in the country. His work is therefore something more than a mere traveller's tale. He acquired a good speaking knowledge of the Scandinavian languages, and in this way was enabled to share the home-life of all classes, and observe accurately the manners and customs of the inhabitants. During this period he travelled, as he tells us, and as the narrative shows, "in an irregular course, by routes often crossing each other, and at different seasons of the year, either from the Baltic to the Polar Sea or from the east to the west." He observed "the whole coast from Haparanda to the extreme northeastern point of Norway, a distance of 3,200 miles, the greater part of it both in winter and summer"; and besides, he "sailed on almost every fjord, whose shores have in the aggregate an extent of 3,000 miles or more." His great merit lies in his fine descriptions of the scenery and physical characteristics of the country, and in his accurate and sympathetic account of the manners and customs of the peasantry. We think he is sometimes too lavish in his praise of these rude peoples, and that he might have found something to criticise, as Bayard Taylor did; but his pictures of their interiors, of their daily occupations, of their dances and weddings and other festive gatherings, and of their religious worship, are so true and life-like that we can easily forgive him for not having the heart to find fault with a race to which he became fondly attached, and which he designates as "probably the most independent,

honest, and faithful of the European nationalities."

M. Du Chaillu professes to have paid special attention to the prehistoric and viking ages, but the archæologist and historian need not therefore look to him for any new or important information. He gives a few chapters on Scandinavian geology, sketches the outlines of the stone, bronze, and iron ages, and undertakes to give an account of the runes; and while these chapters have more or less value for the general reader, they have scarcely any for the scholar or the scientist. The history of Scandinavia is alluded to in the vaguest manner, while the literary and artistic activities of its inhabitants are utterly overlooked. We might have expected some indication of the position of Norway and Sweden in the world of culture. The naturalist Sars is mentioned, but he is called "Tars." Peter Christian Asbjörnsen is very generously spoken of, but no appreciation is shown of his great service as the Grimm of Norway in rescuing the folk-lore from oblivion. But we will not quarrel with our author about this. It is sufficient for us to record the fact that literature, history, science, and art do not come within the scope of his work. Nor are we disposed to point out all his peccadilloes in the translation of Norse and Swedish phrases, in his remarks about the politics of the country, and in what he has written about the theatres and a dozen other minor matters. It takes more than five years to become a thorough Scandinavian scholar, and it is not to be expected that all M. Du Chaillu's comments and criticisms should stand the test of careful scrutiny. The work is a thorough, instructive, entertaining, and systematic description of the Scandinavian peasants and their physical environment, and as such we most heartily recommend it.

It would not be difficult to enumerate fifty English men and women who have recorded in elegantly printed and bound volumes their personal experiences in the valleys and on the fjords and lakes of Norway and Sweden, and given us, in more or less brilliant passages, their impressions of arctic scenery and the midnight sun; but, with two or three exceptions, their works are scarcely worthy of mention. Mr. Vincent pleads the want of a satisfactory American work on Scandinavia, and raises expectations in us that he is going to supply it. He says he has not forgotten Bayard Taylor's 'Northern Travel,' but remarks that "it was written a quarter of a century ago, and is therefore slightly antiquated." He forgets that we have had in the meantime Charles Loring Brace's 'Norway and Sweden,' J. Ross Browne's 'The Land of Thor,' G. W. Griffin's 'My Danish Days,' John Dean Caton's 'A Summer in Norway,' Samuel Kneeland's 'An American in Iceland,' Bayard Taylor's 'Iceland,' and E. L. Anderson's 'Six Weeks in Norway,' some of which will compare favorably with 'Norsk, Lapp, and Finn,' both in scope and accuracy. We by no means find the thorough "ethnographic, philological, and topographical" treatment of the North which Mr. Vincent sets out to give us, and it is evident he had not the necessary equipment for such a task. But his work has one important quality: it is graphic and very entertaining. Mr. Vincent is an experienced traveller and a close observer of men and things. We can heartily commend his chapters on the Lapps and on the Grand Duchy of Finland, in which he furnishes a good deal of information not easily accessible elsewhere. 'Norsk, Lapp, and Finn' will induce many to leave the beaten tracks of southern Europe, and spend their vacations amid the grotesque scenery of the fjords and valleys of the North.

We cannot say as much for Miss Tyler's 'Scandinavian Summer.' Throughout her 394 pages we find scarcely one interesting passage. She discourses everlastingly about breakfast, dinner, supper, and bed-time, without the power of forgetting herself for a moment, excepting when she fills in her narrative with tedious extracts from commonplace guide-books. Her descriptions of the fjords and mountain scenery, and of the celebrated fish-market in Bergen, are so tame that it is difficult to read them with patience. All she has to say of the midnight sun is: "I know nothing finer, unless a sunset on the Nile, with the afterglow; perhaps even that is less wonderful than the midnight sun under favorable circumstances. But personal comfort has a good deal to do," etc. She goes on to tell how she "made interest with the stewardess to procure her a bottle of hot water," etc.; and, as if conscious of her utter lack of the descriptive faculty, she quotes in a foot-note Bayard Taylor's incomparable page on the phenomenon in question. It is to be regretted that Miss Tyler undertook a task for which she had no fitness.

CHILDREN'S BOOKS.—III.

If all the makers of boys' books on foreign countries were as conscientiously accurate in spirit and details as Mr. Edward Greey in his 'Young Americans in Japan,' published by Lee & Shepard, Boston, the adults of the next generation would be saved much vicious prejudice. Every one of the twenty chapters is headed with a pretty stanza translated from the Japanese, and all show the keen observation of a quick-eyed traveller mellowed by long study of the language. Mr. Greey, having studied the subtleties and technique of native art, has himself designed the cover, and added a few sketches among the one hundred and seventy-one pictures which will make the work a prize even in the nursery. Most of the illustrations are well-known veterans, that have already lived as many lives as a cat is supposed to worry through. Far better, however, than Aimé Humbert, who first drew most of them from native works, does the American author interpret them. The text is a pretty, lively, and amusing story of travel from Nagasaki, overland and by way of the Inland Sea, to Tokio. There, the hilarious comments of Johnnie and Fitz, the criticism of Mrs. Jewett and Sallie, and the sage and explanatory remarks of the professor on the objects seen in their travels, end. Fun without caricature, facts without dulness, abound in this most interesting book.

Mr. Alden's 'Cruise of the *Ghost*' (Harpers) is intended exclusively for the entertainment of youth, and must be judged from that standpoint. Hence, it is a most delightful, exciting, plausible, and intoxicating little book, and those lads who have a love of the water and of boats will regret that it is not continued in the same vein through an unlimited number of volumes. Looked at from the point of view of a more mature age, and acquaintance with the locale of the story, one is impressed with the fact that Mr. Alden has been inspired rather by the Government charts than by an actual personal knowledge of the navigation of the South Bays of Long Island. The ancient mariners who frequent Shinnecock Bay will be surprised to learn that one may drift, even in the densest fog, through the intermittent inlet which is at times opened through the beach hills, out to sea without being aware of the circumstance. The extraordinary skill with which a third-classman (second year) at Annapolis, at home on a vacation, handles a twenty-foot light-draft sailboat in a heavy northwest gale several miles off the Long Island coast, and his subsequent management of a water-logged brig, cannot fail to convince the people of the United States that the money expended in the education of our naval cadets has not been spent in vain. There can be no doubt that Mr. Alden is a "sailor-man" by practical training.

We are glad to announce another volume of Mr. Towle's "Heroes of History"—'Ralegh, his Exploits and Voyages' (Lee & Shepard). Raleigh's life has been many times told, but it has a charm that will always make it worth telling over again, and we doubt whether any life of him is more attractive to the young than the one before us. It was worth while to tell the "apocryphal" stories (as Mr. Edwards pronounces them) of the cloak and the ring, as they are stories that everybody ought to know; but at the same time the reader ought to be informed that they are apocryphal, or at least are so considered. We shall always quarrel with the illustrations in books of this class until the book-makers understand that the pictures form a part of the history, as well as the text. Portraits of the hero and other personages; views of actual places; pictures of real objects; contemporary representations of interesting events; nay, even maps of the regions described, or plans of cities and battle-fields—will not such illustrations as these be as entertaining to our boys and girls as the made-up pictures which we find in this class of books? We do not believe in cramming children with information, but the accuracy of knowledge and the insight acquired by constant familiarity with historical realities cannot be valued too highly.

Miss Sarah Brook's 'French History for English Children' (Macmillan) can hardly be called a "juvenile," as it is, in its style and the treatment of its subject, adapted to the age, say, of fifteen and upward. For these it is very well fitted—decidedly attractive for young readers, and failing, we think, principally in the matter of emphasis. All readers, and particularly children, need to have their attention fastened on what is essential—the great men, the great events, the great ideas—and let the rest go. In this the book before us is deficient. There are also some slips—as where the *Duke* of Anjou is spoken of in the twelfth century, and the *Count* of Lafayette (p. 392). On page 39 we find the exaggerated statement that, in the time of Charles the Great, the laborers on an estate "were always slaves." There are nine excellent maps, forming the best small historical atlas of France with which we are acquainted; but we think the first map (of Gaul) should have given the Gaul of the fourth century rather than that of Cæsar's time—or both could have been given on the same map.

Children receive pleasure from the mere jingle of simple verses and the recurrence of simple rhythms, without much regard to the sense conveyed by them. A collection of songs for children, therefore, to be appreciated, calls less for melodic inventiveness or harmonic depth on the part of the author than for skill in securing sufficient rhythmic variety to avoid monotony. From this point of view 'The Little Folks' Album of Music,' with music by J. W. Elliott, J. M. Bentley, and other composers (Cassell, Petter, Galpin & Co.), can be commended. The book is nicely bound, the songs are clearly printed on good paper, and there is an appropriate picture for every song—domestic scenes, pictures of animals and flowers, comic pictures, etc. Mothers or nurses who can play a simple accompaniment on the piano can easily teach the little ones to sing the melodies, and will thus find this collection a good means of getting them interested in music, and discovering whether it will be worth while subsequently to put any one of them through a regular course of vocal or instrumental music. It may perhaps be questioned if children will see the point of the

play on words in the first and second songs, but there is certainly no harm in it.

The 'Five Little Peppers' (D. Lothrop & Co.) were poor children—so poor that even butter for their brown bread was almost an unheard-of dainty, but so brave and helpful withal that we are sorry that the author, Margaret Sydney, did not show us how they would have bettered themselves by their own steady effort. On the contrary, she provides them with sudden friends, rich and benevolent enough to smooth all their way for them. The prettiest thing in the book is the planning of the brother and sister to make out a Christmas tree from their own scanty resources. It would have been far finer as a bit of artistic work, as well as more useful morally, to carry it out to the end, and to show the beauty of taking pleasure in little things, than to bring in the other people and heap upon the children the old hackneyed balls, dolls, and hoops. The author, also for the sake of a sensational page, "gives away" the motives of her good genii who have done everything for the children out of admiration for their courage and perseverance. The Peppers are discovered to be near connections, to whom not much less was due in common humanity. If ever the nondescript English which Mrs. Pepper uses was heard in real life, it certainly was not in the old New England villages, or from the old New England stock from which she came.

'Under the Dog-Star' (Porter & Coates) and 'Hazel-Nut and her Brothers' (Cassell), are two books of the kind upon which are lavished every variety and luxury of wood-engraving. Too seldom is the story at all equal to the beauty of its dress, but in these two the pen fairly rivals the pencil. "Jock" writes his autobiography, which we are by turns ready to pronounce most canine or most human, to prove the falsity of the common sayings about "a dog's life" and "a cat-and-dog life." He inserts the stories to which he from time to time listens with his playmates the children. One of them, "The Onion that Sprouted," is quite a marvel of the story-teller's art, in its unaffected simplicity and its faint touch of pathos. Its moral is exactly the one which the history of "the Peppers" failed to teach—that keen, sweet pleasure may be found in the love and care of little things. "Hazel-Nut" is a little maid who comes to a household where there are already so many brothers that one of them insists, in his delight, "How can she be a real sister? We never have girls in our family." The devotion of the boys to her, with its softening, steadying effect upon them, is the thread, not too plainly apparent, by which are linked together the many pleasant adventures in the life of four stirring, frolicking, but high-minded boys in Cambridge and New York. It is all very entertaining for the elders as well, from the novel undertaking of "A Great Fair of Cats" to the fate of the "poor, foolish, brave yellow dog, Rufus."

Adjectives which should duly describe 'Bessy Bradford's Secret' (Cassell) might be thought over-strong, so we prefer to repeat the author's own description of the characters in the story: "The extreme selfishness of Pete"; Charlie, "idle, heedless, reckless, mischievous"; Harold's "hot temper"; Fanny, "always borrowing trouble"; Robbie, "an unmitigated little prig"; Maud, "a Paul Pry in petticoats." The deeds or misdeeds of these children during a short summer holiday make up what the author calls "a tale of persistent meanness." Why is it not better to teach by the example of goodness and not by the warning of evil? It only remains to be said that the pictures, though pretty enough in themselves, are often a surprising misfit to the events they are supposed to illustrate.

'A Story of Four Acorns' (D. Lothrop & Co.) is a graceful little fantasy by Alice B. Engle, in which the sights and sounds of the forest are inwoven with fitting verses and stories into the long dream of a child. Its effect can hardly be that of reality, but it will be a delightful winter reminder of summer haunts for children who already care for the woods, and it ought to help to awaken in others that love of nature which so often proves an invaluable zest and solace in mature years.

The 'Robinson Crusoe,' published in London by Bickers & Son (New York: Scribner & Welford), is a single volume, of clear print, of less than 400 pages. It is of course condensed, particularly in the part succeeding Crusoe's island experience. Several motives justify this proceeding where young readers are in view; but the lesson in toleration furnished by the episode of the Catholic priest, on the return to the colony, is marred by an omission like the following (p. 335):

"It is true, this man was a Roman; [and perhaps it may give offence to some hereafter if I leave anything extraordinary upon record of a man whom, before I begin, I must (to set him out in just colors) represent in terms very much to his disadvantage, in the account of Protestants; as first, that he was a Papist; secondly, a Popish priest; and thirdly, a *French* Popish priest]; but justice demands of me to give him a due character," etc.

The particular feature of this edition, however, is the illustrations, which are Stothard's, and here the budding bibliophile may amuse himself with a little comparison. Stothard's engraver in Stockdale's self-styled "splendid edition" (though it is full of typographical errors) of 1790 was Medland, and it must be admitted that he was more skilful than the artist whose handiwork, copied by the autotype process, is before us. The differences in rendering are instructive. Moreover, some plates are to be found in one edition which do not occur in the other; one is reversed, and so on.

Illusions: A Psychological Study. By James Sully. [International Scientific Series]. New York: D. Appleton & Co. 1881.

EXCEPT the structure and functions of the brain, the subject of illusions is probably the most confused and confusing in the whole range of modern psychology. On the one hand, it is admitted that our sensations and perceptions are only symbols of the objects they represent, and that our best chosen words have still less in common with the thought they would express. Berkeley proved that we were mistaken in thinking that we could know matter, and Hume showed that true knowledge of cause or even of our own mind was illusory. On the other hand, it is asserted that the general consensus of mankind is sufficiently accurate to guide conduct, and that it is an illusion to expect more. While the whole field of mental science is thus open to any one who would treat this subject, he is compelled to base that treatment upon some quite definite theory of mind in general. The merit of such a work must therefore be sought less in its details than in its method and scope, and in these essential respects Mr. Sully has made a valuable and original contribution to psychology.

In his work on Intelligence, M. Taine assumed that all the material of which our knowledge is made is illusions, and that, as the latter mutually limit and correct each other, the former becomes accurate and valuable. Mr. Sully, however, asserts that the mind is always surrounded by a penumbra of illusions, and that only a little fatigue, excitement, or inattention is sufficient to break through the mental solidarity or consensus and admit some one of them to domineer over even the senses. They may not only simulate the immediate knowledge of perception, and assume all the varied forms of dreams; but introspection, insight, memory, and belief are all subject to illusions. Concerning illusion of the senses and dreams the author has only collected facts from a wide reading, and grouped them around a theory of normal perception which does not differ in any essential respect from that of Spencer and Wundt. In the chapter on introspective illusion, or the errors involved in the apprehension of the content of our own minds at a given moment, it is admirably shown how we not only constantly mistake external for internal states and feelings, and are apt to find almost anything that we seek in our subjective experience, but that with respect to our real motives, our dormant aspirations, and our highest emotional experience we are greatly liable to deceive ourselves. We constantly exaggerate the intensity and persistence of present but evanescent states, and mistake the wish to feel in a particular way for the feeling itself. From the inability to analyze the "deliverances of consciousness" the introspective philosopher asserts the simplicity of the idea of beauty, or of the soul itself, or declares that the utterances of conscience are immediate, and that the will may be intuited as free, or as a power of spontaneous determination of action superior to and regulative of the influence of motives. The mind tends to mix up facts of present consciousness with inferences from them, and to invest itself with the supreme power of absolute origination. Indeed, this is essentially the standpoint of the old rational psychology still in use in many of our colleges. The early atomists thought of the discontinuity of matter as granulation, which even the naked eye could sometimes perceive as particles. The microscope, and still further chemistry, reduced the limits of these ultimate elements, revealing great complexity where simplicity had been assumed. So, too, what had long been assumed as ultimate and simple psychic elements are resolved by better methods Space, *e. g.*, is analyzed into a system of local signs, between the nearest of which, as distinguishable under the compasses, there may be many really different sensations which we cannot distinguish. Thus, in a word, nothing is simple or immediate in the mind, as the introspective method (which has, after all, a certain justification and is only in process of being fashioned) assumed.

The fundamental illusion of memory is wrong localization in time. Not only is a very small interval of time magnified and a larger one always reduced, but a year seems in retrospect much shorter relatively than a week. We exaggerate the impressions of early life, because we project our present moods into the past, because youth is most impressible, because only very few early impressions really survive, and because harsher features are softened and pleasant ones transformed and idealized by the very progress of our experiences and emotional life. We remember what was novel or strange, and then unconsciously transform it by reasoning from later standards of novelty, so that the past, so far as it is restorable as it was, is hardly recognizable. In short, says Mr. Sully, memory resembles an old manuscript exposed to dampness; it is here blotted and discolored with foreign material, and the letters run together; there eaten entirely away, or glued, leaf to leaf, and with other portions even transposed or dislocated, and which must be rather interpreted than read. Even dreams often get woven inextricably into the memory-continuum. The feeling of familiarity in new experiences is another of the spectra of memory, and may be explained as resonances from a vast and mysterious past of inherited ancestral experience, analogous to the

Platonic reminiscence. Such errors in filling up our past life make our personal identity less a simple idea than an imaginative conjecture, for they involve at least an illusory sense of continuity. As, however, identity depends in part upon constancy of cœnæsthesis, or the mass of organic sensations, any great moral or physical change will confuse it, as in several incipient forms of insanity, where the patient regards the new somatic feelings which attend his disease as a foreign power or personality, or conceives his present as detached from his former self.

Not to dwell longer upon its forms, it is plain that the very notion of illusion implies some standard of certainty, or else universal doubt, even of perception, follows. Science can never answer, with all its relative tests, the final form of the question how far illusions extend; but rather it, like all thinking, must at last take its stand on a stable consensus, as a body of commonly accepted belief, from which skepticism and every individuality of opinion differ, when examined psychologically, far less than is commonly thought. We only wish the author had given more attention to the pathological and the philosophical departments of his theme, or at least had not lost sight of the fact that this consensus is always practical at bottom, so that it is natural selection which secures us chiefly against illusions by eliminating them with their consequences. We should not forget that many so-called illusions are inseparably connected with conduct which has been most accurately adapted to the environment, and that this accounts for their persistence in the face of the most conclusive scientific refutation.

Washington Irving. By Charles Dudley Warner. [American Men of Letters.] Boston: Houghton, Mifflin & Co. 1881.

We are not sure whether we are announcing a truism or a paradox when we say that, as a rule, biographies of literary men are better unwritten than written. Despite the passionate desire of modern times to get some insight into the exterior life of the man Shakspere, we have a strong conviction that the world is really better off without it. For the true life of the man of letters is in his books; and that other life which is merely, as the evolutionists tell us, his struggle with his environment, if it does not, as is too often the case, unpleasantly jar on our feelings, or damage the ideal we had formed, is apt to be dull, material, and commonplace.

In a slight degree the latter is the case with the biography of Irving. His life was bright and happy; no eager interests, no passionate purposes, ruffled its calm expanse. He won, with ease, honor, friends, wide fame, and universal goodwill; nothing that we can learn about him but increases the affection in which we hold his memory; yet the narrative of his life leaves us hardly more than the impression of a pleasant day in June—calm, sunny, marked by no event beyond the moving of the shadows. This easy uneventfulness of life may have been the cause of two notable facts in Irving's literary career. One is, that his external life seems to have had no effect on his work beyond giving him (as in 'Bracebridge Hall' and 'The Alhambra') variety of background for his figures; and the other is, that his work shows no improvement with advancing age, but rather the reverse; his 'Knickerbocker,' written pretty much "as the linnet sings," being distinctly better—not merely more spontaneous and attractive, but more artistic—than the more careful work of his later years.

A biographer, under these disadvantages, has two resources: he may adroitly turn to the work to illustrate the man, and thus beguile the reader into a pleasant literary ramble while the subject waits; or he may enliven the uneventfulness of the narrative by personal anecdote. Both these resources Mr. Warner has tried; nor can we blame him for giving us twenty-five or thirty pages of 'Knickerbocker's History,' which we read, for the hundredth time, more satisfactorily from his clear type than from the battered copy on our book-table, and with hardly less enjoyment than when that copy was new, and its owner had never seen Sterne nor heard of Rabelais. It so happens that the last biography of Irving noticed in these pages was the first of a series which, if our memory serves us, came to an untimely end. We heartily trust that the series of which this handsome and very readable little book is the first instalment may have better luck.

Aryo-Semitic Speech: a Study in Linguistic Archæology. By J. F. McCurdy. Andover: Warren F. Draper. 1881. 8vo, pp. xi-176.

We have in this volume one more attempt to prove the original connection of our own family of languages and that of which the Hebrew and Arabic are leading members. If its author had made himself creditably known to scholars by sound and important contributions to philology, no one would have the right to grudge him such amusement as he might find in discussing the subject presented in it. So far, however, as we are aware, this is his first and only publication, and must be taken to represent his productive leisure and force during the years while it has been coming out in instalments in a journal more noted for theological soundness than for philological profundity. That being the case, the undertaking was a thoroughly ill-advised one; and it is much to be regretted that the author had not experienced friends to dissuade him from it, and direct his attention to more profitable subjects. Nobody in the world, probably, whose critical opinion is worth having, will care to know what a novice opines about the ultimate unity of Semitic and Japhetic speech, or with what ingenious and captivating analogies that unity may be sustained by one whose name is attached to no investigations in any accessible and legitimate field of inquiry. It is much as if an intending chemist were to commence his public career with speculations on the relations and possible identities of the simple elements. As Professor McCurdy himself points out, the prevalent opinion of scholars is that the question he attempts to solve has never been competently discussed; and not only that, but it cannot be competently discussed at the present time, when the comparative grammar of Japhetic speech is undergoing a revolution, and a comparative grammar of Semitic has never been produced. There has, indeed, been a regular progress in the best opinion on the subject, from certainty through doubt to denial. Fifty years ago learned and unlearned alike held, with hardly a thought of question, that all our languages were only corrupted descendants of Hebrew; then, as the latter was gradually remanded to its proper place as one, and by no means the most primitive, of a little group of dialects of extremely peculiar character, the asserted derivation dwindled to a persuasion of ultimate kindred between the tongues of the two leading historical white races—a persuasion to be substantiated by such indications as could be pressed into service without too careful examination; and now the nearly universal opinion is that the question is no scientific one, at least in the present stage of glossological science. We may not be justified in asserting that it will never be legitimately solved—the future may be left to settle that; what is certain is, that no solution yet made, down to the one before us, has any substantial value, or will stand longer than till some one shall take the trouble to demolish it.

Neither in its subject nor in its method, in its grasp of philological principles nor its critical estimate of authorities, is Professor McCurdy's work entitled to favorable attention.

The Lake Regions of Central Africa. A Record of Modern Discovery. By John Geddie. With thirty-two illustrations. 12mo, pp. 275. London and New York: T. Nelson & Sons. 1881.

Mr. Geddie has divided his narrative of the discoveries made within the past thirty years in Central Africa into three parts, devoted respectively to the rivers Nile, Congo, and Zambesi. As is natural, the greater portion of the book is devoted to the travels of Livingstone and Stanley, though "honorable mention" is made of Baker, Grant, Speke, Burton, and Cameron. No single journey is given in detail, with the exception of Stanley's descent of the Congo, and as the author apparently lacks the power of making clear geographical statements, the result at times is somewhat confusing. We doubt whether an uninformed reader, for instance, could form from this work any accurate conception of the present condition of the question of the Nile sources, or of the relative position of the great lakes and their watersheds. Nor would he be much helped by the wretched map which the publishers have seen fit to insert. Mr. Geddie's constant efforts to be humorous are at once fatiguing and unsuccessful. Occasionally he is decidedly coarse, especially when he is referring to cannibalism. Of the general accuracy of his statements, so far as our present knowledge goes, we have seen no reason to doubt, and we can accordingly commend the book as a popular and readable account of one of the most fascinating, if not the most important, chapters in the history of geographical research. We regret, however, to say that its value is lessened by the want of an index.

Reports on the Estate of Sir Andrew Chadwick and the Recent Proceedings of the Chadwick Association in reference thereto. By Edmund Chadwick, Chairman, and James Boardman, Secretary and Treasurer of the Chadwick Association. To which is prefixed the Life and History of Sir Andrew Chadwick, etc., by John Oldfield Chadwick. London and New York: Charles L. Woodward. 1881. Pp. 300.

Sir Andrew Chadwick, knighted by Queen Anne in 1710, in 1712 one of the Band of Gentlemen Pensioners, married Margaret Humphreys in 1713, and died in 1768. Nothing seems to have been found out concerning his method of acquiring a moderate fortune, and no reason can be given for this preposterous book except the fact that various Chadwicks thought themselves his heirs. It seems quite certain that Sir Andrew was son of Ellis Chadwick, of Carter Place, in Lancashire, grandson of Robert, and great-grandson of Ellis C., of Wolstenholme. Soon after Sir Andrew's death, Sarah Law, a first cousin, claimed and obtained much of his property; but certain leaseholds were in trusts, the leases ending in 1847. In 1842 a John Chadwick presented a claim as descended from James, oldest uncle of Sir Andrew, and obtained a part. The claimants since have been numerous, and apparently every presumed line of Chadwicks, traced to an uncle of Sir Andrew, is tainted with illegitimacy, or at best its legitimacy is lacking in the necessary proofs.

There is not the slightest reason for any one but a reviewer or a Chadwick to wade through this volume. There is no interest connected with the worthy knight or his fortune beyond what may surround any person of moderate means who flourished in the past century. His

money was distributed and spent long ago, and but for the fact of certain long leases which ran out so recently, there would have been nothing to make a stir about. But as one Chadwick, in humble life, did so lately obtain a small amount, of course his innumerable cousins and namesakes have tried for their share. The report treats of these matters in detail, but with a solemnity utterly out of place, when we reflect that the writers had arrived at the painful conclusion that there was nothing left undivided for even the truest heir to obtain. One of the writers sneers at certain American Chadwicks who not only claimed the property but refused to join the Englishmen in this search. But really an American claim-report is usually a credit to our national love of humor. Our pretensions to English estates are broad and noble; they are not fettered by probabilities, and they are as brilliant as soap-bubbles. These Chadwicks have painfully hunted out the records of the property which Sir Andrew really owned, and have found out who obtained the wealth by due process of law. Then they dolefully conclude that, though robbers inherited, it is too late to dispute the division. A true American would never waste time in looking for actual houses or lands; but a rumor of a square league in Lancashire, or a dozen parishes in London, or a million pounds in Chancery, would suffice for him to found an association. The contrast of the two styles can now be well made; and as an exhibition of credulity and misplaced energy, this Chadwick book will probably find its appropriate place in the back shelf of every large library.

H. FAWCETT,

14 King Street, Covent Garden, London, England.

"A brilliant example of what the best American talent attains."—*Literary World.*

The Chronicle of the Drum.

By W. M. THACKERAY. With Illustrations.

DRAWN BY
HOWARD PYLE,
FREDERICKS,
FROST,
SHARE,
LUNGREN,
WOODWARD,
TAYLOR,
DAVIS,
and others.

The story of Drummer Pierre, with its ringing verse and its series of vigorous and dramatic pictures of the French Revolution and the Napoleonic Wars, is well known to the lovers of Thackeray as the chief of his ballad writings; and with the superb spirit and force of the drawings which the artists have contributed to a poem which thus gives them more than ordinary suggestion, the book is the finest art-work of the year.

One volume quarto, illuminated cloth, full gilt. Price, $5.00.

ENGRAVED BY
FRENCH,
CLOSSON,
J. P. DAVIS,
HELLAWELL,
HEINEMANN,
ANDREW,
CLEMENT,
KARST,
and others.

". . . His 'Chronicle of the Drum,' which will bear comparison with Macaulay's Lays of Ancient Rome and with Aytoun's Lays of the Scottish Cavaliers, and which is better than the best of Thornbury's Songs and Ballads, excellent as one or two of the latter are. . . . Messrs. Charles Scribner's Sons are making an edition of it which will surpass any edition hitherto published, even the *Édition de Luxe* of Thackeray's Works. It will be profusely illustrated by our best figure-artists, who have entered heartily into the spirit of their work.

". . . Given such a ballad as 'The Chronicle of the Drum,' and such sympathetic interpreters as these, we shall have at least one Holiday Book this year that we can look at as well as read with delight."—*R. H. Stoddard in the Evening Mail.*

"All the drawings are effective, and many of them are of a high order of excellence, from the group of old soldiers fighting their battles o'er, which Mr. Frost has bathed in a flood of golden sunshine, to the tall guillotine which Mr. Pyle has set up in the black night with a fearful glint of a stray moonbeam on the sharp edge of its knife. And what poem is more worthy of such rich pictorial setting than this of Thackeray's? His stalwart stanzas, if they do not stir the blood like the blare of a trumpet, at least give it a start like the roll of the drum whose adventures they chronicle."—*The Philadelphia Press.*

"The poem is stirring, but the illustrations, in the finest examples of American wood engraving, lend peculiar beauty to the volume. . . . In beauty of design and delicacy of treatment they have never been surpassed by anything yet produced in wood engraving."—*N. Y. Commercial Advertiser.*

Nos. 743 and 745 Broadway, New York.

A. C. ARMSTRONG & SON'S

NEW BOOKS—NOW READY.

RAPHAEL:

HIS LIFE, HIS WORKS, AND HIS TIMES.

Illustrated with 155 engravings and 43 full-page plates. Imperial octavo volume, 620 pages, handsomely bound in half morocco, gilt tops or full gilt edges, $15; Turkey morocco, $20; crushed levant or tree calf, $22 50.

The large number of illustrations in the text, together with the numerous full-page plates, in this superb work, all reproduced from Paintings or fac-similes of Drawings of RAPHAEL, BY THE FIRST ARTISTS IN EUROPE, MAKE THIS THE MOST ARTISTIC AND VALUABLE GIFT-BOOK EVER PUBLISHED IN THIS COUNTRY.

The New York *Christian Union* says it is a volume of rare beauty and exceptional value, being practically a history of Italian art in the years which marked its highest and fullest development—the story of Raphael's career and achievements. The Biography is a scholarly performance of the highest interest. The illustrations bring vividly before the reader the successive stages by which the artist rose to the highest rank, and present at the same time many of the most famous masterpieces of painting. THE BOOK HAS A PERMANENT VALUE FAR BEYOND THAT OF MOST HOLIDAY PUBLICATIONS.

A Picturesque Tour in Picturesque Lands.

FRANCE, SPAIN, GERMANY, SWITZERLAND, HOLLAND, BELGIUM, TYROL, ITALY, SCANDINAVIA.

A magnificent imperial folio volume, printed on superfine paper. Illustrated with 170 engravings, many of them full-page plates, from designs by the most celebrated painters of the various countries described. Bound in richly-ornamented cloth, full gilt (in a neat box), price $10; Turkey morocco, $20.

The London *Times* says: "Nothing can be happier than the way in which the artists of this work bring palpably before us precisely what we want to know. Many of the subjects will be recognized as the work of artists so distinguished as JULES BRETON, COROT, the eminent landscape painter; ISRAELS, the first of the modern Dutch Schools, and TIDEMAND, the Norwegian, whose pictures are so remarkable for truth and character."

Life and Speeches of John Bright.

By G. Barnett Smith. Two steel portraits. 1 vol. crown 8vo, 708 pages, cloth, gilt top, $2 50.

The London *Times* says: "This work will be welcomed by a large number of readers. The author has taken great pains to make the work at once accurate and full. He has evidently had access to private sources of information, for he gives accounts of Mr. Bright's personal life that it would otherwise not have been possible to give. . . . He has followed his subject through all the steps of his career."

Edinburgh *Scotsman:* "Mr. Smith has furnished a magnificent testimony to Mr. Bright's genius and statesmanship. It would not be easy to devise a better plan for presenting within reasonable limits a clear and detailed view of the part Mr. Bright has actually taken in public controversies."

The Nature and Function of Art.

MORE ESPECIALLY OF ARCHITECTURE. By Leopold Eidlitz. 1 vol. 8vo, 510 pages, $4.

"Mr. E. is a writer of remarkable strength and originality. His book may be classed as one of the most valuable contributions to art literature published during the last decade. . . . The work deals with the subject so broadly that any reader of artistic tendencies will find a fascination in its pages."—*Boston Evening Transcript.*

A NEW LIBRARY EDITION OF

Milman's Complete Works.

With Table of Contents and full Indexes. Printed from large type, on laid, tinted paper, in 8 vols. crown 8vo, strongly bound in extra cloth.

Price $12 per set (reduced from $24 50). This new edition comprises:

HISTORY OF THE JEWS. 2 vols. *HISTORY OF CHRISTIANITY.* 2 vols.
HISTORY OF LATIN CHRISTIANITY. 4 vols.

Dr. Milman has won lasting popularity as a historian by his three great works, '*History of the Jews*,' '*History of Christianity*,' and '*History of Latin Christianity*.' These works link on to each other, and bring the narrative down from the beginning of all history to the middle period of the modern era. They are the work of the scholar, a conscientious student, and a Christian philosopher. Dr. Milman prepared this new edition so as to give it the benefit of the results of more recent research. In the notes, and in detached appendices to the chapters, a variety of very important questions are critically discussed.

History of Religion in England,

From the Opening of the Long Parliament to the End of the Eighteenth Century. By John Stoughton, D.D. 6 vols. crown 8vo, $15. Comprising:

I. *CHURCH OF THE CIVIL WARS.*
II. *CHURCH OF THE COMMONWEALTH.*
III. *CHURCH OF THE RESTORATION.*
IV. *CHURCH OF THE RESTORATION.*
V. *CHURCH OF THE REVOLUTION.*
VI. *CHURCH IN THE GEORGIAN ERA.*

"There is no need to eulogize Dr. Stoughton's learned research, impartiality, thoughtfulness, picturesque style, and thorough appreciation of the religious, political, and social life of the seventeenth century. The monographs of individual lives are simply charming. The characters, sketched with discrimination and vigor, seem to live and move before us. The human actors and their surroundings can be realized as distinctly in these pages as in any of the brilliant passages of the elegant Macaulay."—*London Christian World.*

TWO NEW VOLUMES OF THE SERIES OF

Heroes of Christian History.

I. *LIFE OF THOMAS CHALMERS, D.D.* By Donald Fraser, D.D.
II. *LIFE OF ROBERT HALL, D.D.* By E. Paxton Hood.

Each in 12mo vols. Price 75 cents. Volumes previously published:

WILLIAM WILBERFORCE. By Dr. J. Stoughton.
HENRY MARTIN. By Dr. Chas. D. Bell. *PHILIP DODDRIDGE.* By Dr. Chas. Stanford.

"A series of books which will be very widely popular. It consists of compact popular biographies of men eminent in religious history, prepared by English and American authors of repute. They are similar in size to the '*English Men of Letters' Series*, trustworthy and sufficiently comprehensive, while yet brief enough to satisfy the demand of a large number of readers who earnestly desire to become acquainted with the lives and work of eminent Christian heroes, but who cannot or do not care to read voluminous biographies."—*N. Y. Evening Post.*

☞ *For sale by all booksellers. Copies sent by express or mail, expense prepaid, on receipt of printed price, by*

A. C. ARMSTRONG & SON, 714 Broadway, New York.

NEW BOOKS.

ORATIONS AND ESSAYS, with Selected Parish Sermons. By J. Lewis Diman. A Memorial Volume. With a portrait. 8vo, $2 50.

This book will be received with eager welcome by the many friends and admirers of the late Prof. Diman. It contains some of his more important essays and addresses, with selections from his sermons, and is prefaced with an admirable Memorial Address by Prof. J. O. Murray, of Princeton, who edits the volume.

SEVEN VOICES of SYMPATHY. Selected from the Poetical Works of Henry Wadsworth Longfellow by Charlotte F. Bates. 1 vol. 16mo, red edges, $1 25.

A choice collection of Mr. Longfellow's poems, which will be highly valued by persons who have been tried, disappointed, or bereaved.

A HAPPY BOY. By Bjornstjerne Björnson. Authorized translation by Prof. R. B. Anderson. 16mo, $1.

This is the third volume in the authorized American edition of Björnson's novels, and is one of the most exquisite stories in modern literature.

MONEY, TRADE, and BANKING. By Joseph H. Walker. 1 vol. 16mo, 75 cts.

A clear, strong, business-like discussion of the subjects of money, trade, and finance, by a business man who has no theories to advocate, but presents sensible and practical views based on thorough observation and long experience.

POEMS, LYRICS, SONGS, AND Sonnets. By Francis Bennoch, F.S.A. With a portrait of the author. 1 vol. 16mo, $2.

Mr. Bennoch was one of the warmest friends Hawthorne won while in England, and was highly valued by him for both his personal qualities and his literary taste. Mr. Bennoch has collected a volume of his poems which have been received with cordial respect by English critics.

THE RELIGIONS OF INDIA. By A. Barth. Translated from the French by Rev. J. Wood. Vol. XXIV. of the Philosophical Library. 8vo, gilt top, $5.

A book of special value on a subject which more and more interests students of history and human progress.

*A MANUAL OF HINDU PAN-*theism. The Vedantasara. Translated, with Copious Annotations, by Major G. A. Jacob, Bombay Staff Corps. With a Preface by E. B. Cowell, M.A., Professor of Sanskrit in the University of Cambridge. Vol. XXV. of the Philosophical Library. 8vo, gilt top, $2 50.

Students of Comparative Theology will find this work peculiarly valuable and engaging.

*** For sale by all booksellers. Sent, post-paid, on receipt of price, by the publishers,*

NEW YORK, THURSDAY, DECEMBER 15, 1881.

The Week.

SENATOR DAVID DAVIS has made the "discovery" that President Arthur's message is the first Presidential message in forty years that has not spoken of the "South as a distinctive part of the country." Considering that President Arthur was identified with that wing of the Republican party which looked upon Southern outrages and the portentous dangers threatened by the "solid South" as their most valuable stock in trade, this fact is very creditable to him. But it is also a matter of great significance that scarcely any reader of the message seems to have been struck by the absence of any allusion to Southern affairs. Only one or two papers that we have seen called attention to it. The "paragraph about the South" does not appear to have been missed at all. It has dropped naturally from the list of political topics. This shows how large an artificial element there was in the agitation which of late years has been striving to represent the Southern question as still the most important and urgent one before the people. The absolute silence of a "Stalwart" President on this subject puts in a somewhat ludicrous light, retrospectively, the conspicuous effort made last year by the leader of the Stalwarts to advance the Southern question as the leading issue in the late Presidential election—the very election which opened to Mr. Arthur the succession to the Presidency. That Southern question, the terrors of which were then paraded in so awful a glare, has evidently ceased to be political capital.

Mr. Garland's disability bill, introduced in the Senate on Thursday, provides that in case of the removal, death, resignation, or inability of both the President and Vice-President, the Secretary of State for the time being, or if there be no Secretary of State then the Secretary of the Treasury, or in case there be neither Secretary of State nor Secretary of the Treasury, then the Secretary of War, shall act as President until the disability is removed or a new President elected, "or in case there be no occasion under the law for an election, until the existing term of office of the President so removed, resigned, dead, or disabled, shall have expired." The existing provisions of law give the succession to the President of the Senate, or, if there be none, to the Speaker of the House. There are many reasons why neither of these officers is well fitted to fill a Presidential vacancy. Their politics may be opposed to those of the President or Vice-President whose place they take, and in theory at least their original selection is based on purely parliamentary or legislative grounds, while the successor of the President ought to be taken from the executive branch of the service. It is true that the Vice-President, who may at any time become President, is *ex officio* presiding officer of the Senate, but he is not a Senator, and is still supposed to be selected with a view to the possible discharge of Presidential duties. Mr. Garland's bill makes no attempt to deal with the serious questions which arose last summer, as to what "inability" is, or who is to decide when a case of it arises. It is really more important to settle this by law—if it can be so settled—than to change the line of the succession.

The appointment of Mr. Frelinghuysen as Secretary of State will be generally regarded as a "safe" one. Mr. Frelinghuysen is a man of a conservative turn of mind, a good lawyer, and a politician of experience. While possessing abilities of a solid character, he lacks those qualities which, however shining and valuable elsewhere, are peculiarly out of place in the management of our foreign relations. He is without that brilliancy which likes to exhibit itself, and that restless ambition which constantly wants to be doing something and is thus inclined to make work for its activity when there is no need for any. Nor will he be likely ever to yield to the temptation of resorting to startling strokes of policy for the purpose of making political capital for himself. Our foreign policy requires a sober head and a steady hand, ready to act with judgment and vigor when there is necessity for it, but just as willing to be satisfied with the dulness of ordinary routine when there is none. There is scarcely anything more dangerous and expensive in the conduct of foreign affairs than excessive zeal in meddling with other people's business, and trying to exercise an influence all over the world. Mr. Frelinghuysen has no sensational tendencies, and is likely to be on the safe side with regard to the real interests of the United States. The only thing he may have to guard against is permitting his good nature to be drawn into some of the foreign schemes of the coterie gathered around General Grant.

Mr. Blaine retires leaving considerable diplomatic confusion behind him, and fully justifying the apprehension which we expressed when he took office, that he would prove "rockety and journalistic." There can be little doubt, indeed, that but for the sedative influence of President Garfield's illness and death, he would by this time have made far more trouble for us than he has. The selection of Kilpatrick and Hurlbut for the two leading South American missions indicated, to begin with, a somewhat light minded view of the responsibilities of his place—one a harum-scarum cavalry officer, and the other an old stump orator from Illinois, who had done some political "work" for him. Having appointed them, however, ordinary prudence would have prevented his putting too heavy burdens on them, or selecting their posts as the scenes of his leading international rumpus. Hurlbut speedily gave way to the strain, and began to commit the absurdities which Mr. Blaine himself had to expose in the letter of reprimand published a day or two ago, and Kilpatrick's death has enabled some of his friends to defend him by alleging that the worst of his despatches was a forgery perpetrated after his decease. A special agent has been sent out to clear up the mess, and he will doubtless be able to do so, but not without having our diplomacy seriously discredited in the eyes of both Chili and Peru. Mr. Blaine's now celebrated despatch about the Panama Canal, in which he tried to do away with the Clayton-Bulwer treaty by pretending not to be aware of its existence, was very "journalistic." It was an extension to diplomatic discussion of the journalistic practice of forbidding all mention of the name of an obnoxious person in your paper. He has thus imposed on his successor the disagreeable duty of accounting for his failure to notice the most important document in the whole affair. Mr. Frelinghuysen will have either to abandon Mr. Blaine's ground, or make clear in what manner European agreement not to meddle with the canal would be offensive to a protector of its neutrality such as we propose to be. Either task will be troublesome, after all that has occurred.

Mr. Blaine's instructions to Messrs. Kilpatrick and Hurlbut, if either of these gentlemen had been selected for his place on the ground of fitness or experience, would certainly leave them, or the survivor of them, in an unenviable position. Happily for Mr. Hurlbut, he never made the slightest pretence, so far as is known, to any sort of diplomatic training, good, bad, or indifferent, or to any serious knowledge of international law or modern history. Mr. Blaine, too, it is to be presumed, knew all about him before he appointed him, and accordingly, when he shows by the publication of his despatches that Mr. Hurlbut either did not understand Mr. Blaine's English, or assumed that when Mr. Blaine said a thing he meant exactly the opposite, the discredit does not fall on the envoy alone. In fact, we think it must be divided pretty equally between him and his chief. Mr. Blaine told him that if Chili exacted territorial indemnity for the cost of the war, she would be within her right, though the exercise of this right would be perhaps inexpedient or harsh, and that he should use his influence to induce the Chilians to forego this right, and allow the Peruvians to pay a money indemnity instead, if they were able. But of the completeness of Chilian discretion in the matter, under the laws of war, he did not make the least question, and he warned the Peruvians that it would be "injudicious" for them to declare that "under no circumstances would the loss of territory be accepted as the result of negotiation." Mr. Hurlbut, after having passed these ideas through his mind, informed the Chilians that when organized resistance ceased "the state of war should cease"; that "it was one of the first duties of the Chilians to make peace"; that to take territory from Peru would be "incompatible with the dignity and public faith of Chili"; and that it was "contrary to the rules which should prevail between civilized nations to proceed at once and as a *sine*

qua non condition to incorporate into Chilian jurisdiction [*sic*] territory which is undoubtedly Peruvian," without giving the Peruvians the choice of making a money payment instead. He further laid it down that the amount of the money payment should, if the parties failed to agree, be determined not by the conqueror, but by "disinterested arbitration."

Except the peculiarity of the Hurlbut mind as an interpreting instrument, there is only one way of accounting for the extraordinary body of doctrine which the envoy put into his "memorandum" to Admiral Lynch—namely, his having been allowed to see the despatch of the same date on the same subject which Mr. Blaine wrote to General Kilpatrick. In this despatch, the Secretary, after a somewhat diffuse statement of the victor's rights after a successful war, reached the singular and entirely illogical conclusion, that upon the question whether the Chilians should take territory or money as their indemnity, "the power desiring the territory cannot be accepted as a safe or impartial judge." Why the position of the Chilians should constitute an exception to the rules under which all other victors have acted, the Secretary did not explain, and probably would have found it difficult or impossible to do so. But the Kilpatrick despatch was distinctly more minatory and exacting than the Hurlbut despatch, and wound up with a mysterious and, as far as we can see, wholly gratuitous intimation that if either of the belligerents allowed any European power to act as "friend," or to offer "aid or intervention," there would be "more active interposition on the part of the United States." What this also meant is probably not known to anybody but Mr. Blaine. But the effect on General Hurlbut's brain was to neutralize the effect of his own despatch completely, and to satisfy him that high ground was going to be taken by somebody, and that it would be well for him to get ahead of Kilpatrick in taking it; and he accordingly sat down and penned the "memorandum" which Kilpatrick afterward contradicted.

Mr. Hurlbut has probably had less difficulty in understanding Mr. Blaine's letter of November 22, with regard to his operations in Peru, than his original instructions gave him. Mr. Blaine, it is true, declares that the State Department "is in the possession of no information which would seem to require the withdrawal of the confidence reposed in you"; but as the letter strongly objects to almost everything that Mr. Hurlbut has done since he has been in Peru, and winds up with the announcement that the President has decided to send a special envoy to discharge the duties which would naturally fall upon him, this continuance of confidence must have struck him rather as a testimonial to his character as a man than as a sincere expression of regard for the value of his services as a diplomat. The trouble into which Mr. Hurlbut has got has evidently arisen from a misapprehension of his position in Peru. Mr. Blaine sent him out as an ordinary minister, and in this light he was regarded by the Chilians, Peruvians, and Bolivians. But the functions which he assumed on taking charge of the post were not those of a minister, but of a sovereign government, with full powers. He in fact set up a Hurlbut government, and proceeded to negotiate as a sovereign with the numerous other governments with which he found himself surrounded.

This furnishes a simple explanation of all his acts. As a Minister he was not, Mr. Blaine shows, entitled to hold diplomatic communication with Don Patricio Lynch, because Don Patricio is the commander of the Chilian army of occupation, while Mr. Hurlbut is accredited to Peru. But any government can address a "memorandum" to another government on any subject it chooses. Again, Mr. Blaine expresses disapproval of the letter written by Mr. Hurlbut to Señor Garcia, the secretary of General Pierola, on the ground that he was accredited to Calderon, and had nothing to do with Pierola, who was carrying on a rival government of his own, which the United States refused to recognize in any way. He thinks he should have told Pierola to communicate anything he had to say to Washington. But the most distinct indication of the assumption of sovereign powers by Mr. Hurlbut is to be found in the fact that he attempted to establish diplomatic relations between the Argentine Confederation and Peru. To do this he telegraphed to the United States Minister accredited to the former country suggesting that a Minister should be sent by it—for what purpose does not appear. Mr. Blaine says with regard to this: "This would have been clearly without the sphere of your proper official action at any time, but as there then existed a serious difference between Chili and the Argentine Confederation, you might naturally have anticipated that such a recommendation would be considered by Chili as an effort to effect a political combination against her. The United States was not in search of alliances to support a hostile demonstration against Chili, and such an anxiety might well be deemed inconsistent with the professions of an impartial mediation." So we should suppose. Mr. Hurlbut, of course, could hardly expect a *de-facto* government of the sort established by him in Peru, with nothing but earnest moral feeling behind it, to last very long, but he may congratulate himself on having outlived Calderon, to whom he was accredited, and Pierola, with whom he negotiated, and upon having succeeded in retaining the confidence of the United States to the end.

According to the *World*, the real secret of the desire of Chili to annex a part of Peru is the British influence in that country. England's attitude toward Peru has, it seems, completely changed "since the signature at Santiago of a contract intended to give the British house of Anthony Gibbs & Co. a virtual monopoly of the trade in fertilizers for the next quarter of a century." The particulars of this contract have not come to light, nor is it easy to establish any connection between the contract and the change in the attitude of Chili. Chili has apparently abundant reasons for desiring to annex Peruvian territory in the expenses of the war and the difficulty of getting a money indemnity, apart from any pressure brought to bear upon it by the British Government for the sake of the firm of Anthony Gibbs & Co. But assuming that the *World* is quite right, and the British Government is exerting the most powerful pressure for the sake of promoting what are supposed to be British material interests in Chili, this ought not to surprise or shock us. We have known all along that during the past few years, while we have been wholly idle, Great Britain has been extending her commercial relations with Chili, until the Chilians are in close connection, so far as material interests are concerned, with England. The absurdity of attempting to get up a scare over British influence in Chili, as something new and unexpected, is all the more apparent when we reflect that this kind of influence is the direct and necessary consequence of our own negligence in not doing exactly what the English have done in Chili.

The Senate is usually less eager than the House of Representatives to "go behind the returns" and inquire in behalf of partisan interests into the circumstances of the election of its members. In the cases of Messrs. Miller and Lapham, of this State, reluctance to do this might be increased by the fact that there is not in the Senate just now the majority necessary to set aside the election, as elections have been set aside on no stronger grounds by either party in the other branch of Congress. The reasons given by Senator Hill, in the report of the Committee on Privileges and Elections, for declining to disturb the sitting members are, however, sufficient. As to the regularity of the election of Messrs. Miller and Lapham the committee is of opinion that, conceding the facts submitted by the protesting members of the Legislature, they do not affect the validity of the proceedings. Whether the Legislature did in separate bodies proceed to vote on the second or third Tuesday after the Governor's notice, whether at some of the ineffectual sessions a quorum was not present, and whether a majority of all the members-elect of each body voted on the day of election, are matters of no consequence, provided that a quorum was present when the Senators were chosen and a majority of those present voted. The dismissal of these technical objections is a right conclusion, for the obvious reason that the intent of the Constitution and the laws is to secure an election, not to prevent it; to give expression to the will of the people, not to thwart it. To deprive a State of representation in the Senate on account of the blundering or negligence of the Legislature, when the mistake or omission was trivial and technical and there was in the final election a substantial conformity to the Constitution and the laws, would open a way to gross abuses. As to the "rumors of bribery" mentioned by the Democratic members of the Legislature in their memorial to the Senate, the committee wisely decides that "mere allegations" and "rumors unaccompanied with evidence" do not warrant any movement toward investigation.

The New York banks are still below the 25 per cent. reserve limit, and the loan market is, therefore, easily within the power of speculators who have a few millions of cash. This power early in the week was actively exercised in favor of high rates for money, and borrowers at the Stock Exchange paid as high as 6 per cent. per annum plus $\frac{1}{8}$ of 1 per cent. per day. To increase the disbursements of the Treasury, Secretary Folger gave notice that he would prepay, with full interest to January 29, any part of the $20,000,000 of 3½ per cent. bonds called for redemption then, such prepayments not to exceed $5,000,000 each week. The moral effect of this announcement of the Secretary and the moderately-increased disbursements of the Treasury, together, intimidated the speculators who were "rigging" the loan market, and late in the week it was possible for all having acceptable collaterals to get money at 6 per cent. Foreign exchange continues to rule about midway between the gold-exporting and the gold-importing point; the main tendency of the foreign exchanges is, however, against gold imports, as the merchandise imports are increasing while the merchandise exports are falling off. American securities are well held in Europe, and the amount going there probably exceeds the return movement. United States bonds were notably strong during the week; the advance was $\frac{1}{4}$@$\frac{3}{8}$ except for the extended 6s, which are the first in order to be paid off. There were several meetings of representatives of the trunk-line railroads for the purpose of restoring harmony. The reported result was an agreement that West-bound rates should be advanced in January, but nothing was accomplished toward a settlement in the matter of chief importance—the East-bound freights. The tonnage of the trunk-line roads is now not as large as a year ago, although, taking the railroads of the country as a whole, the current business is larger than then.

Among the anti-Mormon bills introduced into Congress will be one providing for challenges and oaths to jurors in trials for bigamy and polygamy. The object of this and all similar measures is to prevent such cases from coming, as used to be said in Congress, before "twelve unblushing polygamists" for decision. It seems to have escaped the lawyers who have considered the subject at Washington that the ordinary principles of the common law governing jury trials are quite sufficient to prevent polygamists serving on juries in polygamy cases, without any new legislation whatever. There is already a United States statute against bigamy, and upon an indictment under that statute no one would be competent to sit on a jury to try a bigamist who was conscientiously opposed to its enforcement—that is, who was a Mormon—any more than a man conscientiously opposed to hanging could be taken as a juror in a murder trial. By excluding all such persons, an anti-Mormon jury can be obtained, as was done in the Reynolds case years ago, and no statute could make the process any easier. But whether obtained in one way or another, such a jury would be packed, and any conviction by it ought to be revolting to our sense of justice. To break up polygamy in Utah by packing juries would be quite as bad as polygamy itself; and it is perfectly clear that no new statute can make the impanelling of an anti-Mormon jury easier than it is now.

The *Times* says that the proposed American line of steamships, which are expected to make the voyage between this country and Europe in five or six days, will be incorporated under the laws of Delaware, because these are so much more favorable in respect to taxes that the saving "by an incorporation in Delaware instead of in New York will amount to thousands of dollars annually." It is to be hoped that no mistake so bad as this will be made in building the "twenty-four-knots-an-hour" steamers. A law passed by the New York Legislature at its last session provides that "all vessels registered at any port in this State and owned by any American citizen or association incorporated under the laws of the State of New York, engaged in ocean commerce between any port in the United States and any foreign port, are exempt from all taxation in this State, for State and local purposes." The exemption is complete. Delaware could not do better for the fast line except by levying a tax for its benefit.

The "Institute of Heredity" held a meeting last week, at which some important sociological questions were discussed. The main problem before the society, as stated by Dr. J. Storer Cobb, the presiding officer, was "how to set and continue in motion such parental influences as shall make the hereditary tendencies of future generations wholly good," and the true solution of it was stated by Warren Chase to be that the law, as it undertakes to regulate marriage and divorce, also ought to "scrutinize those who wanted to marry," and prevent such marriages as the study of heredity shows are likely to have bad results. As an illustration he referred to the well-known fact that the children of tobacco-loving parents relish tobacco "as ordinary children do candy." A general law regulating engagements would, no doubt, relieve society of a great deal of trouble. It is notorious that parents, who have hitherto had the matter in their hands, have made a complete mess of it, and the innovation introduced in this country of taking it out of their hands and leaving it to the determination of those who are contemplating marriage, is viewed with alarm by all conservative sociologists. Young people themselves are all at sea about it, and their sense of the need of advice and instruction in the matter is so strong that they show a tendency now to resort to editorial supervision, and the leading journalists of the country are having their minds continually distracted from their other duties by being called upon to give advice to young men and women, who wish to know whether marriages contemplated by them are likely to turn out well or not. The objection to journalistic supervision of engagements is obvious. Editors have no power to compel the appearance of parties as witnesses or to take testimony, and their decisions are based on mere *ex-parte* statements, often colored by passion or untrue, while they can have no binding force whatever. By some oversight Dr. William H. Atkinson was allowed to make an address, in which he threw ridicule on the whole scheme, and called the Institute "a body of ignoramuses," but quiet was restored by a pleasant paper from Mr. H. H. Brown on "Our Boys and How We Crucify Them."

The Guiteau trial has been from the first the most extraordinary criminal proceeding in modern times; and among its minor incidents none have been more remarkable than the announcement on Sunday that the leading counsel for the defence was now going to lecture upon it. Mr. Scoville, it seems, who has undertaken a disagreeable task at great personal loss, is in actual distress for money, and, in order to enable him to continue to perform his professional duty, was yesterday to deliver a lecture on "incidents and developments connected with the Guiteau case that may properly be presented in a public meeting and yet are not appropriate to the court-room under the rules of law and evidence." Under ordinary circumstances a suggestion that a lawyer engaged in defending a criminal was going to lecture on his case while the trial was going on, would lead to his punishment for contempt; but, as such a course might prevent Mr. Scoville's continuing in Washington, it is not likely that he will be interfered with. Nevertheless the whole thing is grossly improper and scandalous.

The verdict rendered in the Scott-Sampson theatrical libel suit in London shows that "personal" journalism, when pushed to the point of circulating a direct charge of attempt to blackmail by means of threats against a woman's reputation, may become unsafe and unprofitable. The defendant was Mr. Henry Sampson, editor of a weekly paper called the *Referee;* the plaintiff, Mr. Clement Scott, the dramatic critic of the *Telegraph*. The transaction out of which the libel grew was a loan of £500 by Admiral Carr-Glyn to Mr. Scott. The payment of this money in some way came to the knowledge of Mr. Sampson, who thereupon published in the *Referee* a statement to the effect that a certain theatrical writer had forced Admiral Carr-Glyn to pay, by threats of making disclosures of a terrible character with regard to the late Miss Adelaide Neilson, who had left the Admiral the bulk of her property. The *Referee* went on to characterize the transaction and Mr. Scott in no measured terms. The whole thing was a pure invention, and Mr. Scott has now recovered a verdict of $7,500. The trial threw a strong light on the extraordinary risks which plaintiffs have to assume in cases of this kind. The defence adopted the usual course of cross-examining the plaintiff to show that if he had not done what was charged in this libel, he had done things quite as bad. The object of course is to mitigate the damages, by showing that the plaintiff's reputation is not, after all, worth so much money as he says it is. The possibility of its being brought into use is one of the main explanations of the common unwillingness to resort to civil suits for the vindication of character.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

PRESIDENT ARTHUR took up his residence at the White House on Wednesday, Dec. 7.

On Monday President Arthur sent to the Senate the nomination of ex-Senator Frelinghuysen, of New Jersey, for Secretary of State. The Senate confirmed the nomination unanimously, without discussion or reference to a committee.

It has been positively announced that Postmaster-General James will retire from the Cabinet on or before January 1.

A Cabinet meeting was held on Friday. Among the questions said to have been discussed was the organization of a better form of government for Alaska, and the establishment of telegraphic communication between the United States and Chili and Peru. The question was raised as to how far the support of this country could be given to such an enterprise without compromising the rights of Chili and Peru in their present complicated relations.

A large number of bills and petitions were introduced into the Senate on Wednesday. A great many of the bills are for the settlement of private claims, and are technically termed relief bills. On Friday in the House of Representatives a special committee, consisting of one member from each State, was appointed to arrange a programme for conducting proper services in both houses over the death of President Garfield. The committee will act with a committee from the Senate appointed for the same purpose. Little business of importance, beyond the introduction of bills and the confirmation of Mr. Frelinghuysen as Secretary of State, has been transacted in either house during the week. Mr. Keifer is reported to be hard at work organizing the committees.

Among the many bills introduced into the Senate during the week is one by Senator Hoar to provide for the education of Indian children. This bill authorizes the Secretary of the Interior to cause every Indian child dwelling west of the Mississippi River, exclusive of those belonging to certain civilized tribes, to be placed at schools under such general regulations as may be approved by the President, and provides that a sum not exceeding $500 shall be expended for each child.

Senator Edmunds has introduced a bill into the Senate, authorizing the Secretary of the Treasury to pay the necessary and reasonable expenses incurred in consequence of the assassination of President Garfield, provided the aggregate sum allowed and paid for such expenses does not exceed $100,000.

The Bankruptcy Sub-Committee of the Senate Judiciary Committee reported to the full committee on Tuesday a bill embodying a new National Bankrupt Act. This bill places the whole matter in the hands of the circuit courts under their equity jurisdiction. The sub-committee, after the fullest investigation, decided that this plan was preferable to that embodied in the Lowell Bill and the other bills which have been presented to them. The committee does not approve of any plan which contemplates the appointment of registers in bankruptcy.

Certain memorials from members of the New York Legislature, affecting the right of the present Senators from New York to occupy seats in the Senate, which were referred to the Committee on Privileges and Elections, have been reported back to the Senate, with the request that the committee be discharged from their further consideration, as they did not consider any of the reasons alleged in the memorials as invalidating the elections sufficient to justify further investigation.

The original instructions, together with the subsequent letter, sent by Secretary Blaine to Messrs. Hurlbut and Kilpatrick, Ministers to Peru and Chili respectively, have been furnished for publication by the Secretary of State. From the original instructions it seems that Mr. Hurlbut was directed to recognize the Calderon Government, for the reason that the Chilians were in possession of the country and themselves recognized Calderon as the actual executive power. It would also seem that Mr. Hurlbut acted directly contrary to his instructions when he rebuked the Chilians for insisting on the cession of Peruvian territory, for it is distinctly stated in his instructions that "the United States cannot refuse to recognize the rights which the Chilian Government has acquired by the successes of the war, and it may be that a cession of territory will be the necessary price to be paid for peace." Neither in the instructions to Mr. Hurlbut nor in those to Mr. Kilpatrick is there any suggestion of an effort to put the United States in the position of an uninvited arbitrator, and much less to lay down the law as to what terms of peace the Chilian Government was to accept. In the letters addressed to Messrs. Hurlbut and Kilpatrick after their contradictory performances, both Ministers are reprimanded. Mr. Hurlbut is censured for answering Pierola's letter, for carrying on a diplomatic correspondence with Admiral Lynch, for misrepresenting the attitude of the United States by quoting a part only of his instructions, for intimating that he was accredited to Calderon because Calderon would not consent to a cession of territory, for suggesting to the Argentine Republic that it send a Minister to Peru, and finally for negotiating for a naval station in Peru. In short, it will be seen that in every act of General Hurlbut while in Peru he misunderstood and misapplied his instructions.

The defence practically closed its case in the Guiteau trial on Tuesday, Dec. 6. Congressman Farwell and Mr. George C. Gorham were put on the stand to testify in regard to the political condition of affairs at the time of the assassination, but nothing of importance was elicited from them. On Wednesday the prosecution opened their testimony in rebuttal. Ten "prominent citizens" of Freeport, Illinois, were called to the witness stand. They had most of them known the prisoner's father and declared their belief in his sanity. He had held a number of important public offices in Freeport, including the superintendence of the county schools. He was unusually intelligent; had a logical mind; was a public-spirited man, etc. The evidence of these gentlemen was not shaken by the cross-examination, and did much to upset the theory of hereditary insanity. More testimony of the same kind was brought forward on Thursday, showing that Mrs. Maynard, the sister of the prisoner's father, whose sanity had been impugned by the defence, had never been considered insane. The prosecution then proceeded to bring forward testimony to prove the sanity of the prisoner himself. A large number of witnesses were called, who testified that they considered him a man of excessive egotism, with a great passion for notoriety, and an accomplished swindler, but that they had never suspected him of mental unsoundness. Mr. D. McLean Shaw, a New York lawyer, created a sensation by testifying that Guiteau had said to him in his office some ten years ago that he was "bound to be notorious before he died"; that "if he couldn't get notoriety for good he would get it for evil." When Mr. Shaw asked him what he meant, he replied that he would "imitate Wilkes Booth, and shoot some of our big men." This testimony exasperated Guiteau to the greatest degree. He covered Mr. Shaw with abuse, calling him a "lying whelp," and other names of a similar description. On Monday, with the consent of the prosecution, the defence called Dr. E. C. Spitzka to the stand. He testified that he had examined the prisoner and had not the slightest doubt of his insanity. He said he regarded him as a "congenital moral imbecile or monstrosity." In the cross-examination which ensued Dr. Spitzka said that he was professor of comparative anatomy at the Columbia Veterinary College, but refused to allow himself to be called a "horse-doctor." On Tuesday Dr. Fordyce Barker, of New York, was put on the stand by the prosecution. He was examined by Judge Porter, who put a number of questions to him the answers to which bore directly or indirectly against the defence. Guiteau's conduct during the week was but a repetition of what it has been throughout the previous days of the trial. Mr. Corkhill has been the main object of his abuse during the last few days.

Mr. George Scoville, counsel for Guiteau, is advertised to deliver a lecture on Dec. 15, in Washington, on "Some incidents and developments connected with the Guiteau case that may properly be presented in a public meeting, and yet are not appropriate to the court-room under the rules of law and evidence." It is stated that Mr. Scoville has been forced to take this course in order to obtain money for the support of his family during the time he has devoted to the defence. Considerable comment has been made on the propriety of such a performance.

In certain civil suits brought against a Star-route contractor, Benjamin B. Wiley by name, in the United States District Court at Philadelphia, verdicts were given against him for a total amount of $24,400, which was the amount of the bonds accompanying the proposals for carrying the mails on the four routes for which he was contractor. In the case of Joseph Funk, another contractor, judgments were given against him and his sureties for $9,149.

It is stated that if the necessary appropriation be granted by Congress, Pension Commissioner Dudley will have all the claims which cannot be established by evidence that is of record investigated by special agents.

Assistant Postmaster-General Hatton has made a rule that the sender of any mail matter requested to be returned if not delivered within a specified time, has a right to lengthen or shorten the time originally named on the envelope, but it must remain as long as three days in the office of destination. Additional postage will not be charged for the return of such matter.

The Senatorial contest in Virginia has been exciting considerable interest. It is expected that Mr. Riddleberger will receive the nomination. A rumor having been circulated that President Arthur would "interfere with the fight," on Friday the Washington *National Republican* published a letter from George C. Gorham to Senator Mahone, in which the former states that he had an interview with President Arthur, in the course of which the President contradicted the statement that he was "taking part" in the matter in behalf of Riddleberger; and, on the other hand, he had no views "which in any manner conflict with the friendly sentiments hitherto expressed" by him to Mr. Mahone.

The trial of Lieutenant Flipper for embezzlement of Government funds was concluded on Friday. The defence claimed that Flipper had been entirely innocent of any guilty intentions; that he had been careless in his manner of selling "commissaries" and collecting the money, but not dishonest; that when he discovered his shortage he was afraid to speak of it, by reason of his peculiar position in the army, and had made false statements, hoping to be able to raise funds before being required to turn them over. The Judge Advocate replied that, since the funds had not been presented when called for, Flipper was responsible, and guilty of embezzlement, whatever the causes which led him to commit the crime may have been. He also severely criticised his conduct in making false statements, and reiterating them until the funds were found. After the close of the Judge Advocate's argument

the court was adjourned *sine die*. The verdict will not be known until it has been passed upon by the reviewing authorities.

A sensation was created in the city of Buffalo, on Monday, by the announcement that smallpox of a malignant type had appeared in a thickly settled portion of the city. Dr. Briggs, the health physician, is stated to have said that there is danger of an epidemic.

In consequence of the dreadful calamity at the Ring Theatre in Vienna, the Fire Commissioners on Monday passed a resolution that an immediate inspection be made of all theatres and places of amusement where machinery and scenery are used in this city. The inspection is to be made by the chiefs of battalion in their respective districts, and they are directed to make detailed reports in writing to the Board.

The weather has been very stormy on the Atlantic during the week, and the European steamships due in New York have been several days behind time. Life boats were smashed to pieces and great damage done to the woodwork of the decks. Several sailors were washed overboard.

It is said that all the capital has been subscribed for Mr. Jacob Lorillard's proposed new steamship line to England. Mr. Austin Corbin is among the large stockholders. At his suggestion, the new steamers will land at Fort Pond Bay, ten miles from Montauk Point, where there is said to be a fine harbor. New steel rails will be laid between Hunter's Point and Fort Pond Bay, and express trains will be run between the two points, making the trip in two hours. It is believed that twelve hours can be gained over vessels entering by way of Sandy Hook.

Several instances have come to the notice of the Government at Washington of late of the practice of shipping thieves and worthless persons from Switzerland to America. A flagrant and recent case of this is that of a thief named Dunkel, who was sent from the Canton of Basel under a contract made by the communal authorities with one Baumgartner by name, who was to receive 185 francs upon furnishing proof that Dunkel had been landed in some American port. The American consular authorities in Switzerland protested to the Swiss cantonal authorities against sending this man Dunkel, who is an incorrigible thief, to the United States, but their protests were unheeded. It is probable, however, that Dunkel will be sent back to Switzerland, and the authorities in Washington will undertake to put a stop to this practice.

On Sunday, the 4th inst., General Judson Kilpatrick, United States Minister to Chili, died at Santiago. On Friday, the 9th, John W. Forney, the well-known politician and journalist, died in Philadelphia.

FOREIGN.

A great calamity occurred in Vienna on Thursday evening. The Ring Theatre took fire from the falling of a lamp on the stage, just before the beginning of the performance. The flames spread with great rapidity. The galleries were crowded and the means of exit very insufficient, and the result was the destruction of some 800 lives. The excitement in Vienna has been intense. On Monday a public burial of the victims took place. A solemn requiem mass was celebrated in St. Stephen's Cathedral, which was attended by an immense crowd, including some of the highest dignitaries of the empire. The coffins containing the bodies of the victims were lowered into a common grave 150 feet long and 14 feet wide. Subscriptions are pouring in from all parts of the world in aid of the sufferers. The fire is probably the greatest disaster of the kind that has ever occurred. It is stated that there was an iron curtain before the stage which was intended for just such an event, and had this curtain been lowered the flames would have been cut off from the main body of the theatre for a sufficient length of time to enable the audience to escape. In the panic, however, the curtain was forgotten by the employees, who devoted themselves to saving their own lives.

The Tunisian question continues to occupy the attention of the French Chambers. On Saturday M. Gambetta delivered a speech in which he said that he desired, in accord with the other powers, to effect a settlement of the Tunisian debt similar to that which had been applied to Egyptian finances. He stated that the French loss in the campaign had been eleven hundred men. He also stated that the Bardo treaty was binding until honorable means should be found for releasing France from her obligation toward the Bey. He added that it was possible to reorganize Tunis without depriving her of her independence.

On Monday a debate took place in the French Senate on the Tunisian credits. A number of criticisms and attacks were made upon the Government, but the credits were finally voted. In the Chamber of Deputies on Friday there was a debate upon the proposed commercial treaty with Italy. M. Rouvier, the Minister of Commerce, announced, incidentally, that the Government did not intend to ask for a prolongation of other existing treaties, and that a competent committee would examine such treaties as ought to be signed during the Parliamentary recess. The treaty with Italy was finally adopted.

The action of M. Roustan, the French Minister to Tunis, against the *Intransigeant* newspaper for libel has begun in Paris. The trial has been looked forward to with interest, as it was expected that facts in regard to the Tunisian war damaging to the recent Ministry, and especially to M. Roustan, would be disclosed. As yet, however, no serious charges have been brought forward, notwithstanding the fact that M. Gambetta has released all the public officials from obligation to observe the usual official secrecy.

The committee on the bill for the sale of the French crown jewels inspected them on Wednesday. It is proposed to retain certain of the jewels, including presents from foreign monarchs and the Regent diamond. The committee is in favor of disposing of such as have no historical value.

It is announced that the Chambers of Commerce of Paris, Lyons, Bordeaux, Marseilles, and of a large number of other French cities have pronounced in favor of negotiations for a Franco-American treaty of commerce.

MM. Sully-Prudhomme, Pasteur, and Cherbuliez have been elected members of the French Academy, to fill the places of MM. Duvergier de Hauranne Littré, and Dufaure.

Considerable excitement was caused in Berlin by a recent attack upon Herr Windhorst in the *North-German Gazette*. The article in question accused him of having raised the question, in the Committee of the Whole on the bill for the incorporation of Hamburg in the Zollverein, whether England and Russia would not oppose the incorporation of the lower Elbe. The article further insinuated that Herr Windhorst had been the mouthpiece of foreign agents in the matter. Herr Windhorst has declared in reply that the attack was based on a prejudiced report of the proceedings of the committee. In consequence of this article, the members of the Centre party, regarding it as an insult to their leader, resolved to absent themselves from Prince Bismarck's soirée on Thursday evening, for it was thought that the article had been instigated by Herr Bitter, the Minister of Finance. The latter has disavowed the whole affair, and has stated that the *North-German Gazette* would publish an article giving Herr Windhorst satisfaction. It is generally anticipated that there will be another split between the Ministry and the Centre party.

Crime continues to increase throughout Ireland. The election in Londonderry county to fill the seat in the House of Commons made vacant by the promotion of the Hon. Hugh Law to the Lord Chancellorship of Ireland, resulted in a victory for Mr. Porter, the Liberal candidate. This election is looked upon as a heavy blow to the Land League in Ulster, for it had been confidently predicted that the Catholics would vote unanimously for the Conservative candidate, but the result shows that the majority of them voted for Mr. Porter. Almost all the judges, in opening the different assizes, have alluded to the lawlessness and terrorism prevalent in the country. The courts are almost powerless to execute justice, as it is impossible to get juries willing to convict persons accused of murder or other crimes. It has been suggested that persons under indictment for murder in Ireland be removed to Eugland for trial and tried by English juries. This suggestion has been strongly condemned by some of the Liberal papers. It is open to the practical objection that it is as difficult to get evidence as it is to get verdicts.

A meeting was held at the Chapter House of Westminster Abbey, on the 13th inst., to consider the subject of creating a fund for a memorial of the late Dean Stanley. The Prince of Wales moved the resolution, which was seconded by Lord Granville, and supported by Mr. Lowell. A resolution was unanimously adopted in favor of a recumbent effigy, to be placed near the grave of his wife, and also in favor of the completion of the windows in the Chapter House. Mr. Lowell, among others, delivered an address warmly eulogizing Dean Stanley.

Mr. Henry Labouchere, member of Parliament for Northampton, delivered an address to his constituents recently, in which he stated that he had Mr. Gladstone's assurance that the Government would support Mr. Bradlaugh's application to take the oath.

Lord Dufferin, British Ambassador at Constantinople, requested an audience of the Sultan for the purpose of representing the necessity of reforms in Armenia. In consequence of this demand, the Porte has decided to institute a commission on reforms and send a commissioner to Armenia.

The Turkish Minister of Foreign Affairs has informed General Wallace, the American Minister at Constantinople, that the man who murdered Mr. Parsons, the American missionary, died more than a year ago.

The threatened trouble between Austria and Rumania has been averted by the fact that the Rumanian Minister at Vienna has assured the Austrian Government that his Government greatly regretted the interpretation given to King Charles's speech from the throne at the opening of the Rumanian Parliament. He made a satisfactory explanation of certain passages in the speech.

Count Kálnoky, the newly appointed Austro-Hungarian Minister of Foreign Affairs, has had an interview with the Emperor William and Prince Bismarck, in the course of which he announced his resolution to continue the policy of Count Andrássy and Baron von Haymerle.

The ceremony of the canonization of four new saints, Labre, De Rossi, Laurent, and Claire, was celebrated with great pomp by the Pope at Rome on Thursday. The Pope is reported to have appeared very feeble and to have constantly required the support of his assistants.

There are rumors of changes in the Japanese Government. It is reported that Yoshida Kiyonari, recently Minister at Washington, will be made Chief of the Finance Department.

The silk difficulty between the Japanese and foreign silk merchants has been adjusted by a compromise. A central silk market is to be established on a site convenient to foreigners, and there all business will be transacted. Meanwhile the Japanese will continue to take their staple to the foreigners. The price of silk is reported to be much lower than before the formation of the guild.

TUESDAY, December 13, 1881.

PRICES AND EXPORTS OF GOLD.

The influx of gold into this country during the past two years has been so great that the general impression is that any export of gold is impossible, and the very idea of such a thing is scoffed at. But there are a few indications that such an export is not only possible but somewhat probable; and that this statement may not place us among those alarmists who are continually seeing panics and crises ahead, we submit a few facts on which this opinion is based, with the hope that they may direct attention to the matter.

Not only has the home money market been for some time past stringent, but the same stringency exists in the foreign money centres, and to an even greater degree. In addition to this there is an uncertainty hanging over the foreign markets of which we feel as yet no effects; for there is likely to arise a new demand for gold on the part of Italy which cannot be met save by a disturbance of the markets, or by a transfer of gold from this country. The first necessitates a further rise in the bank rates, which cannot but affect legitimate trade. Is the second likely?

Gold is, after all, a commodity, and it is bought and sold as so much iron would be. The mere fact of its having been selected among civilized nations to act as a medium of exchange has in no way changed its nature. Its value is governed by the same laws that govern the values of other commodities, and, like other commodities, it tends to flow toward that place where it is most needed, where the demand for it is strongest, and where its value is highest.

But there is another point to be considered, and it is one of great importance. It has recently been shown that since 1878 there has been in this country a rapid and marked rise in the prices of articles of common consumption, and notably of food products. The general rise has been estimated to be as high as thirty-six per cent., and in the case of some food products as high as seventy per cent. The *Public* recently said:

> "While the increase in the cost of grain since 1878 has been fifty per cent., in meats forty-four per cent., in dairy products seventy per cent., and in sugar and the remaining articles of food only fifteen per cent., the increase in clothing has been twenty-six per cent.; in the class embracing the metals, coal, oil, hemp, and glass, and representing the department of tools and machinery, the increase has been thirty-one per cent., and in lumber and building materials thirty per cent."

And in a subsequent issue it was shown that since January, 1879, there had been an increase of thirty-eight per cent. in the amount of money in use, or a somewhat larger increase than was determined for prices. From this it may be inferred that the rise in prices is in part due to an inflation of the currency. But it would be unsafe to charge this rise wholly to the currency. For as compared with January, 1879, trade and manufactures are more active, the exchanges have enormously increased, and a larger quantity of circulating medium is required. Besides this, the rise in the prices of manufactured products and of some food products has not been confined to this country, so that the rise cannot be due entirely to such a cause as an inflation which exists only in the United States.

What will be the effect of this rise in prices upon the commerce of the country? Its first effect will be to check exports. Notwithstanding all our boasts of being a great manufacturing nation, it remains a settled fact that by far the largest portion of our exports—more than eighty-five per cent.—consists in agricultural products, food, and raw materials of manufacture; or in those very commodities the prices of which have increased most. The most important part of our foreign commerce is at once affected. The returns of the Bureau of Statistics show that in the month of October, 1880, domestic merchandise to the value of $84,272,736 was exported, while in the same month of 1881 the value was only $66,799,465, and this, too, in spite of the increased price in the latter year. It is true that in 1880 there was a great foreign demand for food products; but there was also something of a demand this year. The speculation in grain has caused a greater reduction in the amount of grain exported than would have resulted from the fact that the crops in Europe had yielded more in the year 1881 than in the year 1880, and that consequently less would be required from this country. There was an upward tendency in the price of wheat as soon as it was represented that the harvests would prove deficient, but this tendency was so intensified by speculation that for a time wheat was actually cheaper in New York than in Chicago. All this has reacted upon exports; for the exporter can obtain less profit by exporting a high-priced than a low-priced commodity, and a foreigner entering a market where prices rule high cannot find it to his interest to buy goods.

Imports will also be affected by the high prices, but in a different manner. As prices rise the foreigner will find that his profits are increased, and he will be induced to send his goods to this market, unless the rise be due to an inflation of an irredeemable currency, which would in whole or in part neutralize his gains. But there is no depreciation in our currency, although there is an inflation. So that in making his exchanges the foreigner will lose nothing, because one dollar of paper is exactly equivalent to one dollar in gold. The high prices, then, will tempt importations, but discourage exports, and, unless prices are forced down by an over-importation, this may be carried so far as to create a so-called balance of trade against this country; and, should this be brought about, gold or securities will be exported, for there will be no demand for our silver. At present the greatest rise has been in the prices of exportable commodities, and not of imported, save in the case of iron.

But every period of great speculation and high prices in the history of this country has been attended with a great increase in imports, and followed by a crisis. The very interesting tables of the prices of staple commodities in the New York market since 1826, in the last report of the Director of the Mint, when compared with a table of imports and exports, clearly show this tendency of imports to increase under a régime of high prices. In the month of October, 1881, the imports had increased by more than four and one-half millions over the imports for the same month in 1880, while exports of domestic merchandise had decreased by more than seventeen millions. With these facts before us, the only question that can arise is, Will the action of this agency be so strong as to turn against us such a balance as was for the ten months of 1881 in our favor ($180,473,603)? We think not. If gold is taken from us at all, it will be because it is more needed in Europe than here, and will consequently bear a higher value. But the possibility of largely increased imports and decreased exports must not be overlooked; though in discussing all matters relating to the foreign commerce of this country it should be remembered that it is governed not by the natural laws of trade, but by arbitrary and meddlesome legislation. This legislation interferes to a certain extent with the normal movement of the precious metals. The tariff system renders it almost obligatory on the foreigner to pay for what he buys of us in gold, or in some substitute for gold, and this has undoubtedly produced an inflation of the currency, with all its attending evils, moral and political, social and financial. It forces us to take gold in payment of a debt which, under a more liberal commercial system, would be settled by a transfer of commodities. The high prices may force us to take goods.

Will any honest and consistent Protectionist now favor a duty on imported gold, which has brought about high prices and a consequent inducement to foreign merchants to flood our markets with their goods?

THE PRESIDENT ON "THE DECLINE OF OUR MERCHANT MARINE."

The passage in the message in which the President discusses the sad condition of our mercantile navy is certainly a little mysterious. He deplores its decline, and at the same time says this decline would not have occurred if we had given our "navigation interests a portion of the aid and protection which have been so wisely bestowed upon our manufactures." He is, in fact, apparently in favor of encouraging our ships to take part in foreign trade by bounties, for the same reason that we protect our manufactures against foreign competition.

We have no doubt that some day our Protectionist friends will furnish the public with an explanation of the mental operation by which they make their love of a high tariff compatible with their desire that Americans should have a large share of what is called "the carrying-trade"; or, in other words, their desire that foreign freights should be made cheaper. But at present this operation is hardly comprehensible to outsiders. These freights are now kept down by competition between foreign vessels. Protectionists who are clamoring for a revival of American shipping by means of bounties, however, wish to increase this competition by enabling American vessels to take part in it. This would make freights lower still, and thus stimulate the carrying-trade. The carrying-trade is, however, another name for foreign commerce—the very thing which Protectionists detest, and which the protective tariff is meant to check and repress. The object of putting high duties on foreign goods under a protective tariff, as distinguished from a "tariff for revenue

only," is to make it difficult for foreign goods to reach us. They are partially obstructed by the cost of freight and insurance, which saves us the necessity of making our tariff higher. If the freight and insurance were lowered, we should have to raise our duties in order to keep them out, and prevent their underselling American products. To lower freights is therefore to lower the tariff, so that it looks at first blush as if a person who was in favor of lowering freights without raising the tariff, or, in other words, was in favor both of protecting American industry and of paying bounties to shipowners to enable them to bring cheap foreign goods to our markets, was a little daft or "cranky." The mystery, we are sure, will some day be cleared up, but at present it is decidedly dark.

Putting the question of inconsistency or self-contradiction aside, however, no sound Protectionist ought to have anything to do with American attempts to take part in the foreign carrying-trade. It is, from the Protectionist point of view, a distinctly immoral, if not accursed, traffic. If we owe it as a sacred duty to the American laborer to shield him from the competition of foreign goods, any American who goes into the foreign trade as a shipowner plainly engages in an enterprise hostile to the best interests of his poorer countrymen. If he were in the business already when the protective system was established and the great truths of protection obtained their first lodgment in the national conscience, his refusal to go out of it without compensation might be excusable, like the readiness of the West India slaveholders to receive compensation for their emancipated negroes. But the man who would now deliberately go into it would be distinctly sinning against the light. That President Arthur wittingly recommended that people should be bribed to go into it by grants of Government money, is something we will not yet fully believe. There must be in this part of the message something to be explained.

It is in the domestic carrying-trade, if any, that shipowners ought to be encouraged to invest capital. Every one acknowledges the utility and morality of the interchange of commodities between the various States of the Union. There is on this point no difference of opinion. Freights between Portland and New York, and New York and New Orleans and San Francisco, cannot be too cheap. The cheaper they are the better for the American workingman and the better for the American manufacturer, too, because the less he has to pay for transport the more he has for wages, or profits, or both. Here, however, we do nothing to lower freights. On the contrary, by shutting foreign ships out from the coasting trade, we help to keep inter-State transportation high. We refuse to allow the American manufacturer who wishes to reach an American market with his goods, to avail himself of the cheaper transportation offered by the pauper crews of European vessels—another most extraordinary inconsistency. The true Protectionist policy ought to seek to make internal transportation as cheap, and foreign transportation as dear, as possible. In other words, the pauper sailors of Europe ought to be invited to carry our goods to and fro among ourselves, but have every obstruction offered to their bringing goods here from Europe. We ought not to pilot ships from foreign ports into ours, or let them use our lighthouses, and ought to sell them bad charts at low rates.

It may be said by some sophists that it is proper for Americans to engage in the foreign carrying-trade, because a large part of it is devoted to transporting American products to foreign markets, and thus "keeping the balance of trade in our favor," or, in other words, bringing over European gold in exchange for our grain, and cheese, and cattle. This plea is specious, but will not bear examination. In the year 1880, not to go any further back, we exported in merchandise $833,633,595; in the same year we imported in merchandise $667,953,302; this apparently leaves a balance of $165,682,293 due to us from foreigners. It is but a small part of the total transaction, but still if we received it all in specie it would be something. But we did not. In 1880 we imported $93,034,310 in specie, and exported $17,142,199, so that we only gained at best $75,892,111, or about half the balance due to us, so that the fact remains very palpable that the foreign carrying-trade, which some people wish us to encourage Americans to perpetuate by Government bounties, was the means of landing on our shores about $600,000,000 worth of foreign goods. In trading with foreigners, we took in exchange for our goods over seventy per cent. of theirs. If there be any value or truth in "Protectionist principles," if "tariff" be a synonym for gospel or glad tidings, as some speakers at the late Convention seemed to think, this surely was a most nefarious traffic—a traffic not to be encouraged by a civilized nation, but stamped with the reprobation, both legal and moral, which finally overtook the slave trade; though this, too, like free trade, once had its apologists, and even apostles.

MORMON POLYGAMY.

If the President's suggestions toward the more effectual suppression of Mormon polygamy seem inadequate, it must be remembered that, though the Republican party has been denouncing the evil for twenty years, very little aid has been rendered by the Republican press toward making legal provision for its suppression. Most articles on the subject consist simply in turgid expositions of the wickedness of the Mormons and of the power of the United States Government. This has been carried on so long that even the law officers of the Government, like District Attorney Beatty, have fallen into the same method, and instead of detailed plans for striking terror into bigamists, give us declamation on the greatness of the country which tolerates Mormon practices. President Arthur proposes that the law of evidence should be so far modified as to enable a wife of a bigamist to testify against her husband. He also recommends "legislation by which any person solemnizing a marriage in any of the Territories should be required, under stringent penalties for neglect or refusal, to file a certificate of such marriage in the Supreme Court of the Territory."

It is almost impossible to judge of the value of the first of these suggestions without information, which the United States district attorneys doubtless possess, as to the readiness of Mormon wives to testify against their husbands. If the prosecuting officers, on preparing cases against polygamists, have found no difficulty, or but very little difficulty, in getting Mormon wives to come forward and testify, and have been prevented from producing them solely by the rule which excludes their evidence, the proposed change in the law would doubtless ruin polygamy before very long. It would not be necessary to procure a very large number of convictions to do it. A few, following each other at short intervals, would be sufficient to strike terror into Mormon husbands. They would be made afraid of their own wives. Nothing so demoralizes a man as the consciousness that he has foes or traitors in his own household. It is in reality the belief that one of the wives would prosecute a man who provided himself with two or more, that furnishes monogamy in the country at large with its principal support. What we should like to know now, therefore, is whether the President's suggestion is based on any report of the law officers of the Territory, showing that the testimony of Mormon wives can be readily had. If this be true, it is most important. But we cannot help suspecting that if it were true we should have heard of it before now. District Attorney Beatty, in his letter to the New York *Tribune* on which we commented lately, says nothing about it. If it be not true, if it be very difficult or impossible to get the testimony of Mormon wives against their husbands, it simply shows that the great difficulty of the Mormon problem for us is the contentment of the women with their "peculiar institution." In this case the solution must, therefore, be found in leading the women to desire, if not something better, something different.

We must also ask, before we build too much hope on the President's proposed change in the law of evidence, in what manner it is proposed to compensate the wife-witnesses for the social and domestic ruin which must necessarily follow the trial at which they appear. In this part of the world a wife who prosecutes her husband for bigamy does not mean to live with him again. Moreover, she has the community on her side. Whichever way she turns she finds sympathy and encouragement. In Utah, on the other hand, a Mormon wife on leaving a Gentile court after prosecuting her husband to conviction would find every door closed against her, and respectable livelihood among her old friends and associates no longer possible. Her position, in short, would be very similar to that of a woman among us who had eloped from her husband with a paramour. Is any provision thought of, or proposed, for supplying to the Mormon women who are willing to aid in bringing Gentile justice to bear on Mormon iniquity that support and consolation which, in this part of the country are supplied by public opinion to the victims of bigamy? If so, what is it? This is a most important and most practical question. Upon the answer to it depends, in our opinion, whether any change in the law will be of the slightest efficacy.

As regards the proposed compulsory registry of marriages, we are here again met by

the fact that, Mormon marriages being secret, even if we make the registry of them imperative, we have, in order to punish failure to register, to prove the celebration of the marriage. In doing this we should be met by precisely the same difficulty which meets us in attempts to prosecute for bigamy: the marriage cannot be proved except by persons present at it, and nobody is present at it but Mormons. In other parts of the world, where the marriage laws are made by the community which is to obey them, their efficacy is secured in large part by the support of public opinion. For instance, no legal penalty would have the force, as a sanction of marriage under prescribed forms, which is exercised by the woman's dread of the disgrace of unlawful cohabitation, and both parents' dread of inflicting on their children the disgrace of illegitimacy. The marriage laws in Utah will have no such support. A secret, unregistered marriage will be a good marriage still, in the eyes of all those whose opinion a Mormon woman cares about. The children of it will be legitimate in the eyes of all those on whom their social position or prospects seem to depend. All these difficulties require far more discussion than they have yet received, and irresistibly suggest the question whether polygamy will not have to be stifled in the Territories by monogamist immigration, just as slavery in the Territories was stifled by free immigration, rather than by positive penal legislation.

AN ILLUSTRATION OF THE WORKING OF THE CAUCUS.

If Mr. Adin Thayer should think of writing again on the caucus, he ought certainly to prepare himself by a little preliminary study of its working in this city, and he could hardly begin better than by attending the trial now pending of General Tremain, by the Eighth District Association (Republican caucus), for having allowed himself to be voted for at the last election by some of the Republicans who were disgusted with the regular nomination. Mr. Thayer, in his address to the Massachusetts club, admitted and even claimed the right of bolting. Said he: "To a certain extent, and under certain limitations, I acknowledge the right, nay, the imperative right of bolting. No human power should compel me to support a dishonest measure, or a corrupt or incompetent man for office." This is in all respects a praiseworthy position, but, as we pointed out to Mr. Thayer, nobody holding it could get admission to any Republican caucus in this city. In order to be elected to any of our District Associations he would have to pledge himself to support the nominations, whether he liked or approved of them or not. Our Republican politicians are practical men, and do not permit their action to be impeded by the "sickly sentimentality" of doctrinaires like Mr. Thayer, with their high-flown fudge about "dishonest measures" and "corrupt men or incompetent men." They do not allow members of the caucus to set up their private judgment about men or measures against the decision of the majority. They think that a person who objects to regular nominations is apt to be, to use Mr. Thayer's language, "freakish and uncertain," and believe that he will, "in nine cases out of ten, sink into complete indifference to public affairs—the indifference which has thus far been the ruin of every free government." And they ridicule also, almost in Mr. Thayer's language, "the divine right of bolting." Accordingly, they allow nobody to come into the caucus who will not promise to take what they give him without murmuring. If any one refuses to vote for their nominees, and begins whimpering about his conscience, and his manhood, and "the moral law," like the theorists of the Thayer school, they simply kick him out. They hold that too many of the dearest hopes of mankind rest on the success of the New York caucus to allow any tricks to be played with it by amateurs, and casuists, and doctors of divinity.

At the last election they nominated for the State Senate in the Eighth district a man of damaged—seriously damaged—reputation, both public and private. The nomination was objectionable in the highest degree from every point of view. As soon as it was announced the Citizens' Committee asked for a hearing from the Senatorial Nominating Convention, with the view of pointing out the defects of the candidate and procuring his withdrawal. They were refused a hearing. They then had a private interview with some of the managers, and with the candidate himself, at which they showed the strong probability of his defeat for reasons given, and asked for the substitution of some one to be named by the chairman of the State Committee. This was denied. They then appealed to the State Committee to adjust the matter somehow, but in vain. As a last resource they then put General Tremain in nomination. The district is and has long been Republican, and there is ordinarily no difficulty in electing a Republican candidate in it. On this occasion the reformers did not succeed in electing their man, but they defeated the regular nominee. Their candidate, General Tremain, is a good Republican and a member of the caucus in regular standing. He was not a member of the Citizens' Committee, and did not participate in the revolt, but he allowed himself to be nominated and voted for. For this he has been put on trial with a view to his expulsion, and a committee is at this writing drawing up charges against him.

As Mr. Thayer has remarked in our columns, it is not caucuses of this kind—close caucuses defended by pledges—he was talking about, but open caucuses, with the right of bolting reserved, such as exist in Massachusetts. But the New York caucus is simply what all caucuses everywhere tend to become as population grows dense and neighbors cease to know each other. The managers in this city have long ceased to entertain, if they ever entertained, the amiable delusion that the caucus is of divine origin. To them it is a purely human institution. They modified it to suit themselves when they made its meetings accessible only to such as were elected by the ballots of those already in possession, and the smaller they can now keep it of course the more power its members possess. All their interests are opposed to any considerable increase of its members or any general participation of the Republican voters in its proceedings. They therefore make it difficult even for the zealous and energetic to get in, impossible for the indolent and careless. Indeed, they furnish the latter with a standing and unimpeachable excuse for "neglecting their political duties."

There must of course be party nominations as long as there are parties. The caucus is in theory a preliminary meeting of the party for the purpose of nominating, and it was this theoretical preliminary meeting which Mr. Thayer had in his mind in addressing his club. But no such meeting takes place in fact. In the great centres of population no such meeting is possible. It is as impossible as election for office by show of hands, or legislation by mass meeting. What is needed, to adapt our nominating machinery to the changes in the condition of our society, is a device, legal or other, for giving every party voter a voice in the selection of the party candidates; in short, putting him to no more inconvenience or loss than participation in the final election puts him to. There might be preliminary caucuses still, or prearranged caucus nominations, but the preference of the whole party expressed at the polls would furnish obnoxious or disreputable candidates with a sufficient warning to get out of the way. If the Gibbs nomination in the Eighth district had been passed upon by the Republican voters, Gibbs would have seen reason for disappearing; a better man would have been put in his place, and a Democrat would not have been elected. Friends of the caucus are fond of pointing to the fate of Rome as an example of what will happen to us if we fail to attend our primary meetings. They, however, apparently overlook the fact that Rome fell mainly because she did not invent representative government. And if the making of party nominations by the party votes be necessary to our salvation, we shall be damned if we do not devise more efficient means than the caucus for bringing it about. Abuse of those who stay away from caucuses has been fully tried and has utterly failed, and the caucus managers do not desire their attendance. So that the reform must come from outsiders.

SIR GEORGE BRAMWELL AND THE ENGLISH BENCH.

London, December 1, 1881.

On Monday last the Bench of Judges and the most eminent members of the bar met together to pay deserved honor to Sir George Bramwell. The banquet formed a striking scene, but I gladly leave the description of it to correspondents skilled in the art of so-called word-painting. My object in writing to you is not to give a picture of the banquet, but to call attention to the light thrown on English habits and opinions by the outburst of general sympathy and admiration which has marked the close of the late Lord Justice's career.

Nothing gives so good a measure of a nation's character as the objects of its admiration, and "Baron" Bramwell—to give him the title by which he will always remain known—belonged to a class of men who always have been, and I suspect always will be, the true favorites of the

English people. Yet he (and this is true of the class to which he belongs) had nothing about him at first sight calculated to win common popularity. He was not a striking speaker; the basis of his success in life was solid sense and a firm grasp on the technicalities as well as the principles of his profession. He was nothing of a rhetorician: he had none of those rhetorical graces which were possessed by such a judge as Cockburn; he was totally free from that desire for applause which frequently warped the judgment of Lord Campbell. His affectation, if so it can be called, lay in the desire to put forward a kind of manly simplicity, which, though it was perfectly genuine, he probably liked somewhat to obtrude upon a world too much given to respect forms and the outward pomp of office. He was, also, as he himself admitted with singular grace on bidding farewell to his friends, a person of naturally warm temper, and seems to have reproached himself with the fault, which certainly he alone on Monday night remembered, of occasionally letting some slight irritation display itself on the judgment bench. These qualities, good and bad, are not exactly those which appear calculated to gain something like public affection. But any critic of character will easily perceive that Baron Bramwell's great excellences and virtues, no less than some of his minor defects, were precisely suited to gain the good will of his countrymen. He was manly in the best sense of the word—simple, natural. He displayed, without any effort at displaying it, just that kind of sound sense and acuteness which Englishmen of all classes appreciate, and to sense he added a fund of humor which, though it hardly took the form of wit, gave raciness to every word he uttered. Humor, in his case, was, as it ought always to be, combined with humanity. To a prisoner who had to struggle with unjust prejudice, or with the still more subtle injustice of suspicious circumstances, Bramwell was the very ideal of the just judge. To any man in danger of suffering from unfairness, to have Sir George Bramwell on the judgment seat was better than to have enlisted the services of the best advocate at the bar. I have myself witnessed a case where the judge, by his firmness, saved from utterly unjust conviction a prisoner who was, on mere ground of rumor and suspicion, held guilty of murder by all his townsfolk; and those who have had more experience at the bar would, I believe, say that this was not by any means a solitary instance of Baron Bramwell's action as protector of the innocent. With all his sternness toward habitual or cruel criminality, he has always shown compassion for men "caught out in what the world calls guilt and first confusion." Nothing was ever more wisely, as few things were ever more characteristically, said, than the few words of his speech in which he described his view of the duties of a judge toward criminals who had, so to speak, "slipped" into crime; and all his audience knew that his own practice exactly illustrated his doctrine.

Moreover, as we have hinted, the foibles of an estimable character tended almost as much as his virtues to endear the late Lord Justice to his countrymen, and especially to the bar. If you can apply the term "fanatic" at all to a man of such admirably good sense, you may say that Baron Bramwell was a "fanatic for common sense." He was endowed with all that confidence in the truth of common truths, and that implicit reliance on the force of natural logic, which admirers and detractors alike admit to be a marked characteristic of Englishmen. His mode of thought and his mode of feeling were precisely in harmony with those of his countrymen. That he held his opinions with manly independence, that he bowed to no man, that he contradicted popular opinions or popular prejudices, really gave an additional charm to his essential sympathy with the views of life prevailing among the mass of rational and educated Englishmen. This is a point worth notice, because it explains a phenomenon which puzzles historians or critics—the deep and lasting popularity of men like Johnson, whose whole life appears to have been, and in one sense was, an expression of their independent and even wilful opposition to the opinions and feelings of their neighbors. There is nothing at bottom more captivating than the vigorous assault on opinions for which we care little, by an opponent who unconsciously displays fundamental agreement with feelings for which we care much. This is certainly the cause of half Johnson's hold on the interest of Englishmen, and will, I conjecture, be the cause of whatever lasting influence may be retained by Carlyle. In any case, the union of apparent opposition to public opinion with real sympathy with prevailing feeling, has been one source of the respectful admiration felt throughout England for Sir George Bramwell.

It is hardly necessary to add that such admiration for such a man is as creditable to the English nation as to the object of their respect. The permanent weight with the public of character and good sense is, in reality, the guarantee for the lasting welfare of the country. It has done more than anything else to mitigate the evils, which are none the less for not being clearly recognized, of party government. During the revolutionary era of 1848 a lady at Paris said or wrote to Mrs. Grote that the misfortune of French public life was that there "were no Mr. Grotes" to take part in it: the writer alluded not to Mr. Grote's historical talents, but to his singular equity and disinterestedness, and very nearly hit the true cause both of the political calamities of France and of the political good fortune of England. Yet if the genuine appreciation of judicial virtues, displayed both by the bar and by laymen, is of favorable omen for the prosperity of England, it would be absurd not to notice that the English respect for sense, acuteness, and vigor has its weak side. Sir George Bramwell, and the public who rightly admire and respect him, are both a little apt to hold that common sense and natural logic may be treated as the measure of all things. When the Lord Justice took part, as he occasionally did, in legal controversies, he was invariably vigorous in style and always uttered something worth attention—for, as has been happily said, he is under an absolute "incapacity for talking nonsense"; but those who calmly considered his criticisms on the act for regulating the liability of employers and employed, must have been conscious that natural acuteness and judicial training are not of themselves a sufficient qualification for dealing dogmatically with matters involving considerations, not only of jurisprudence and of policy, but also of political economy.

Sir George Bramwell's defects, such as they were, as a controversialist, are in themselves hardly worth more than passing notice. What is far more deserving of criticism is the ignorance or prejudice displayed by some of the current remarks evoked by his retirement. There is, for instance, traceable in almost every notice of the late Lord Justice's career a tendency to speak, or rather to write, of the state of English procedure when Bramwell was called to the bar (in 1838), and even at the period immediately prior to the passing of the Judicature Act of 1873, as a time of darkness or barbarism. Now, no sane man will deny that the system which was remodelled in 1851, and all but subverted in 1873, had very grave defects, but it is the mere cant of ignorance to disregard the fact that this system was sound at bottom and, like all good things, bore good fruits. It produced, for instance, lawyers and judges of trained acuteness and of the highest judicial excellence. There are few things more absurd than to eulogize the merits of Baron Bramwell and to depreciate without limit the system under which Bramwell and men like him rose to the bench. Moreover, though the recent changes in legal procedure are on the whole not only changes, but reforms, these improvements in procedure involve, like every other improvement in the world, certain evils. Whether, for example, the special kind of legal acuteness and knowledge which was fostered by a strict and over-rigid system of pleading will be nourished under a system which will ultimately abolish pleadings altogether, is a matter of fair doubt; that arrangements for constituting a very strong Court of Appeal do in fact tend to weaken the strength and weight of courts of first instance, and to depress the position of an ordinary judge, is not open to question. The very term "ordinary judge," which is gradually coming into vogue, is the sign of what may in the long run prove a very serious judicial revolution. The virtues of English magistrates have certainly been stimulated by the fact that a lawyer who at once obtained a seat upon the bench felt his ambition completely satisfied. He had risen, speaking generally, as high as he could rise; he had no hope of promotion; he had no fear of neglect. It is patent to every observer that this state of things no longer exists. Every ambitious barrister would prefer to pass at once from practice at the bar to the Court of Appeal; a judge, even if he be not excessively ambitious, may reasonably feel mortification in sitting after years of long service in a court of which the judgments are constantly reviewed by men whom he knows to be his juniors, and may think, not unfairly, to be intellectually not more than his equals. The reform of the English judicature has swept away many abuses, but it is idle to conceive that the gains achieved by it are not balanced by some evils.

It is curious to notice that the same kind of critics who speak with irrational contempt of the state of English procedure and law some fifty or forty years back, also complain that a series of legal reforms have effected no practical good. Of the utter stupidity of such complaints it is hardly possible for any one but a lawyer to form a complete conception. But it is worth notice that they all originate in a confusion of ideas which I will venture to say is as common in New York or Boston as in London. Many otherwise intelligent persons entertain in their own minds two absolutely inconsistent ideals of a good system of procedure. At one time they fancy that what may be demanded from a court is that it should settle every dispute in that proverbial "five minutes" in which, as we are constantly told, any man of common sense could determine cases which occupy the courts for months or years. At another time the same critics imagine that the right function of a tribunal is to do absolute justice by sifting every case to the very bottom. Yet that these two ideals each more or less exclude the other is manifest on a moment's reflection. There is a good deal to be said for off-hand, rough-and-ready arbitration by rule of thumb; there is a good deal also to be said for elaborate investigation into the facts of every case, combined with the strictest and most careful application of the principles of law. But what is perfectly clear is, that speedy and more or less arbitrary determination of difficult cases is absolutely incompatible with the thorough weighing of evidence and the logical application of general principles. Half the would-be reformers of procedure complain because judges

do not at once decide every question off-hand, and also investigate it to the bottom. It is the old story of the ignorant longing for inconsistent advantages—of the wish to have your cake and to eat it.

Why has not a judge like Sir George Bramwell not only given us a perfect system of procedure, but also contributed to the codification of the law? This is the complaint which, expressed at much greater length, I have read in one of our leading journals. It is one worth notice because of the almost inconceivable depth of popular ignorance which it betrays, and because this ignorance goes a good way to hinder that codification of the law which all educated Englishmen of a certain class fancy that they desire, and which no Englishman knows how to effect. The plain truth is, that the habits and functions of a judge do not in any way specially qualify him to codify or to contribute to the codification of the law. He has not the special training of a draftsman: and draftsmanship, that is, the expressing rules in clear, apt, and precise language, is, whether the world believe it or not, a special art, requiring in most cases special training for its mastery. It is, further, the peculiar function of a judge to deal with particular cases. The object of a codifier is to lay down principles. The object of every experienced judge is to decide any given case without laying down a whit more of principle than is really required for its decision; the more experienced the judge, the less the number of his *obiter dicta*. Hence his attitude of mind, his way of looking at the law, is completely opposed to the attitude which must be occupied by any one who wishes to reduce the law to a series of principles. Of all the men who possess a knowledge of law, probably the last who in general is fitted to codify it is a judge, and this conclusion, which is suggested by the nature of judicial functions, is, I conceive, to a great extent confirmed by experience. In all countries it is the writers of text-books, professors, jurists, under whatever name described, who have mainly contributed at any rate the materials for the codification of law. The authorship of the Indian codes is due to Macaulay and to men who followed in his steps; but Macaulay never tried a case, and this is true of many if not all of those who may be called his successors. That foreign codes have in many cases been the reproduction of professorial teaching or writing is, if the assertion of those who have looked into the matter can be trusted, past a doubt. I do not for a moment mean to maintain that judicial experience and knowledge will not be needed by the body which, though probably at some still very distant date, undertakes the codification of English law; but I confidently predict that other talents and other kinds of education than those generally possessed by the best members of the English bench, will be absolutely required by any body of men who may be called upon to bring the attempted codification of English law to a successful issue. It is well to admire, and fervently to admire, Sir George Bramwell and men like him, but it is the mere delusion of ignorance to fancy that judicial excellence implies the possession of the same kind of qualities as those which in different shapes were found in Bentham, Austin, or Macaulay.

A. V. Dicey.

BISMARCK AND THE NEW REICHSTAG.

Berlin, November 22.

Notwithstanding about a dozen new elections, which have been necessitated by former double elections, a correct estimate of the character of the present Reichstag can even now be given. It does not greatly differ from my first statement. Of the whole number of 397 members, about 160 are Liberals of all shades, 12 are Social Democrats, 18 Poles, 15 Alsace-Lorrainers, who still protest against their annexation to the Empire; 10 Guelphs, who urge the reëstablishment of Hanover as an independent kingdom; 72 Conservatives, and 100 Ultramontanes. The few outstanding elections, consequently, cannot greatly change the present relative strength of parties.

The new Reichstag was opened on the 17th instant, not by the Emperor in person, as up to the last moment was anticipated, but by Prince Bismarck, who looked indifferent, pale and careworn. Thus the solemnity was unimposing, and lasted only twenty minutes. A few days before the opening all sorts of rumors were afloat. The official papers published threats and blandishments; they hinted at new energetic measures, ministerial changes, and the appointment of a Vice-Chancellor, and spoke of the Chancellor's impending resignation—a manœuvre which provoked an incredulous smile; they tried to convince their more gullible readers that the Crown Prince was opposed to Bismarck, while the Emperor stood by his Chancellor. While, consequently, one man believed that the latter was about to adopt a new policy, another was eager to learn the particulars of the new and "of course Liberal" programme, and a third was even prepared for something like a peaceful *coup d'état*. But nothing of all this happened. Instead of a speech from the throne, Bismarck read an imperial message—quite a new and republican form of making known the Emperor's pleasure to the representatives of the people. This important state paper is very satisfactory, as far as foreign affairs are concerned, and all those who wish for friendly international relations will hail it as a harbinger of peace and good will; but the greater part, which treats of home matters, does not breathe the same conciliatory spirit, and discusses our interior policy as if no new elections defeating the Administration had taken place.

There is only one change for the worse—namely, that the old Emperor identifies himself with his Chancellor, and not only endorses all his schemes and plans, but also indirectly expresses his displeasure with those who dare to oppose his programme. To make plausible to the people what Bismarck has in store for them, sentimental warnings and appeals are resorted to; fancy and romantic dreams are skilfully blended with sober political measures. This is a new, bold, and, under the circumstances, successful manœuvre, particularly well calculated for the agricultural districts of eastern Germany, where patriotism is identical with reverence for and absolute submission to the sovéreign; but "the Imperial legacy" will probably be rejected by the large cities and manufacturing towns, thus injuring the prestige of the Crown. The Emperor, at the instance of his Chancellor again, demands the prolongation of the legislative period to four years (now three), measures for improving the condition of the workingmen, their insurance against accidents, infirmity, and old age, the establishment of saving institutions for their benefit, founded on corporate associations, higher taxes on beverages, the increase of indirect taxes, and, as far as possible, the abolition of direct taxes, and finally the tobacco monopoly.

"All these measures," Bismarck causes the Emperor to say, "are free not only from fiscal, but also from reactionary thoughts of ulterior scope. Their effect politically will simply be that by their realization we shall leave to a new generation the newly-created empire consolidated by uniform and productive finances. We consider it to be our imperial duty to ask Parliament to take this task in hand again, and we should look back with increased satisfaction on all the successes with which God has visibly blessed our Government if we succeeded in carrying with us the consciousness of having left behind to the fatherland new and lasting pledges of its domestic peace, and to the needy and indigent greater security and a larger measure of that assistance which they have a right to claim. We are confronted with far-reaching and difficult questions, whose solution is not to be achieved in the short space of one session, but which we hold ourselves bound before God and men to raise, without regard to their immediate success."

These are the Chancellor's own words, used by him on several former occasions. But however meritorious it may be to alleviate the sufferings of the poor, behind all these fine sentiments there lurks Bismarck's animosity against the Liberals and his hatred of the party of Progress. Divested of its phrases, the message means war to the knife on the defenders of Liberal ideas; but in all other respects it is quite innocent and harmless, as it does not propose to submit to the Reichstag carefully prepared bills, covering the ground occupied by the Emperor, but confines itself to a few glittering generalities. Thus the only practical question which intrudes itself upon the impartial observer is, what Bismarck can and will do in his dealings with the Reichstag. In answering this question you must always bear in mind that his authority has been impaired by the late election, and that less than at any former time has he a compact majority on which he can rely. During the last legislative period his Conservative friends had 108 votes; now they are reduced to about 72, and the Centre numbers about 100 members. Thus a Conservative-Ultramontane coalition may be formed for certain purposes, but if not amounting to at least 200 members, is powerless, as the other reactionary elements, which are hostile to the Government, will only occasionally join them. Besides, a Conservative-Ultramontane majority will dwindle away as soon as peace with Rome becomes the order of the day; for the Papal See will haughtily ask so much that even the most orthodox Protestant cannot submit to its demands.

The election of the presidents of the Reichstag, which took place on the 19th inst., does not refute my assertion. The Conservatives and Ultramontanes, it is true, made a bargain, and with the assistance of some Poles, Alsace-Lorrainers, and a few other reactionary members, elected the whole Clerico-Conservative ticket, consisting of Mr. von Lewitzow, a Prussian Protestant, Orthodox, and "Junker," who obtained 197 votes out of 345 polled; Mr. von Frankenstein, a Bavarian Ultramontane and Chamberlain of the Pope, and Mr. Ackermann, a Saxon State-rights man (Particularist) and poor "Schindluderchen." The Liberals of all shades disdained to make any compromise with the afterward victorious parties, and in nominating their candidates (Messrs. von Stauffenberg, who received 148 votes, von Benda, and Haenel) for the presidency and vice-presidency, only wished to show their strength and unity. This object they attained; but the idea of presiding over the business of a Reichstag in which they have not a majority would have been preposterous if not suicidal. If, however, for the present too weak to form a majority, the united Liberals, under all circumstances, are numerous and strong enough to defend what remains of their former acquisitions against any reactionary encroachment.

Although the recent elections have brought a favorable change for the Liberals, neither they nor any other party are strong enough to form a majority. Bismarck, therefore, for every new measure, is forced to look out for new associates, and to treat with them for each individual case. Some apprehend that he will soon get tired of such a hopeless business and resort to the old conflict which from 1862 to 1866 took place in the second Chamber of the Prussian Landtag. It is

the method of repeatedly dissolving Parliament until he obtains one more subservient to his plans and wishes. In my opinion a dissolution of the Reichstag will not weaken, but only strengthen the Liberal ideas of the country, and will return a more radical Parliament. Bismarck is too good a connoisseur of the political drift of an excited people not to understand his position perfectly well. I therefore think that he will not provoke a quarrel with the Legislature, so long as he can get on with it; but as soon as he sees no outlet he will not recoil from the most energetic measures, first of all sending the Reichstag home. The present session will probably be a very peaceful one. Besides the budget to be passed, there are very few important bills. In spite of the opposition of the Liberals to the inclusion of Hamburg in the Zollverein, and the payment of the necessary funds for carrying it out, that measure will not be rejected, as too many members are bound by their former votes in this respect; but the salary of the Conseil Supérieur (*Volkswirthschaftsrath*) will be rejected by a great majority, and the tobacco monopoly will not be reached. The Reichstag will probably adjourn before Christmas, and if the legislative machine be brought to a standstill, it is for the present much better than a flood of bad laws. † † †

Correspondence.

THE FRUITS OF THE PACIFIC COAST.

To the Editor of The Nation:

Sir: I have seen frequent reference made to the relative qualities of our fruit as compared with those peculiar to the product of California; but I do not find anywhere a brief, direct comparison presented—the statements pro and con are general, and far too sweeping on both sides. A critique, recently published, of a lady's impressions in this respect, and her reply in your issue of the 3d instant, prompt me to submit the following.

During the last fifteen years I have been actively engaged in the maintenance of a pomological garden, near Cleveland, Ohio, on the lake shore, and am now; and in this period I have had occasion to make many visits to California, Oregon, and Washington Territory, as well as British Columbia. Naturally, wherever and whenever I met samples of fruit, I took a direct personal interest in their character, using the basis of my home-grown specimens for comparison. Briefly summed up with regard to California fruit alone, as compared with that of New England, the Genesee Valley of New York, and of Michigan, together with the zone of the lower lake region where I live, the following synopsis may be interesting:

Apples and pears....	Decidedly	inferior	to	ours in flavor.
Peaches (on the low lands).....	"	inferior	"	"
Peaches (on the mountain slopes)..	"	superior	"	"
Plums, apricots, and nectarines.....	"	equal	"	"
Grapes (as a special crop).....	"	inferior	"	"
Grapes (as an average crop).....	"	superior	"	"

I know that the Californian will rest content under almost any criticism sooner than a reflection upon the flavor of his vintage; but I am free to maintain that when a well-ripened bunch of Delaware, Catawba, or Concord grapes, taken from the trellises of the southern shore of Lake Erie, is brought into direct contrast with the very finest of the large variety known to the vineyards of the Golden State, the impartial and just judge will award the best flavor and aroma to the Eastern grape. But when you consider the whole average quality of the entire crop as it annually ripens in California, and compare it with that which we have to show for our entire vintage, then the scale is turned in favor of the Western clusters. All their grapes ripen, and they ripen every year; it is just the reverse with us.

The apples and pears of Oregon, Washington Territory, and lower British Columbia are simple in their excellence and fine flavor—as good as our own; their plums, apricots, and nectarines superior to ours, and equal to the best Canadian orchards; while the peach and the grape are not successful on their soils and in their early October frosts. With regard to cherries and all the small fruits, I may say without reservation that their quality on the Pacific Coast is fully equal to our own in excellence. Also, in this connection, I may record my verdict in favor of the Florida orange contrasted with that which is so extensively cultivated in lower California, at and around Los Angeles especially. When the size and flavor of the products of the vegetable garden are considered, the general average in California is a very high one, especially so in the cultivated sections of northern California, Oregon, and Puget Sound.

Henry W. Elliott.

Smithsonian Institution, Dec. 12, 1881.

SECRETARY BLAINE ON TRANSPORTATION TO BRAZIL.

To the Editor of The Nation:

Sir: I have read with no little interest the published record of the proceedings of the Tariff Convention held in your city on the 29th ult. It is not my purpose at this time to notice the wide divergences of opinion, the inconsequent logic, or the bald absurdities advanced by many of the speakers before that pretentious body. I am content to leave what was there said to the good sense of my fellow-countrymen, convinced that many of the pernicious and false doctrines there enunciated will prove their own best antidote.

I am not, however, prepared to let the letter which was received from our distinguished premier, Mr. Blaine, pass without correcting at least one glaring misstatement of fact which occurs in the second paragraph: ". . . but I confess to some discouragement when I see the American minister to Brazil, at this moment en route to Rio de Janeiro, compelled to reach his post by going first to England or France, in order to avail himself of a line of steamers." This is not true. Our minister to Brazil is not *compelled* to go first to France or England in order to reach his post, for the sufficient reason that a monthly line of A 1 passenger and freight steamers is now, and has been for several months, plying between the ports of New York and Rio de Janeiro. As these steamers are advertised as carrying the U. S. mails, it is somewhat surprising that our Secretary should be ignorant of their existence. I enclose an advertisement of the sailing of one of these steamers, the *Nebo*, from Roberts's stores, Brooklyn, on the 3d inst., touching at Baltimore, and departing thence on the 7th inst., only a few days after this letter was read.

By the way, the novel proposition advanced in the concluding paragraph of Secretary Blaine's letter, that "It is idle to think of selling a man until you first induce him to enter your store," must have provoked a smile from the go-ahead merchants in your city who have carried the system of selling by sample through drummers to its present enormous proportions.

Respectfully, W. J. N.

Baltimore, December 5, 1881.

THE ROOT OF THE SHIPPING DIFFICULTY.

To the Editor of The Nation:

Sir:—

"We contend not only that ships should be relieved of local taxation, but that foreign articles which enter into the construction of a ship should be free of duty."

While entirely agreeing with your excellent article, "A Shipping Revival," from which the above is extracted (*Nation*, December 8, 1881), I desire to call attention to the inadequacy of half measures, and the ultimate injury to the cause of commercial liberty which must result if its advocates allow themselves to be contented with part of a principle the whole of which is essential to produce the economic results expected. It is very well that ships should be relieved of local taxation. It is, as you justly say, necessary, to enable our ships to compete with others not so taxed. But both local taxation of ships, and the taxation on ships' materials, are such drops in the ocean of our ships' disabilities that the immediate abolition of both would, of itself, accomplish nothing toward the restoration of our marine tonnage. What are the materials used in the construction of ships? Labor, and labor only. The ore in the ground, the coal in the earth, and the timber growing in the forest, are the only exceptions. All else in the finished ship is the labor of men. So, also, the whole cost of operating the ship after completion, whether driven by wind or steam, resolves itself into labor, and nothing else, as any thoughtful person, however practically unfamiliar with shipping, can see for himself on the least reflection. In order, therefore, to carry out the spirit of the propositions—viz., to relieve ships of local taxation, and the materials for ships from all taxation—you must recognize labor as the only such material, and free it from taxation as far as possible to do so, and at least as far as other maritime nations do.

But under our present import duties American labor is the heaviest taxed asset in America, and the assurance of calling such taxation "protection to American labor" is but an imitation of the butcher who decks out with ribbons the prize ox which he is about to slaughter. By the last report of the Secretary of the Treasury it appears that the whole import duties collected amounted to forty-three (43) per cent. on the whole value of the imports, which therefore enhanced the cost of those commodities, whether imported or produced here, by that amount. But those articles number some 2,000, and include almost everything that is necessary or useful to life, and therefore the expenses of life are augmented by that amount. But if you compel the laborer to expend forty-three per cent. more than the foreign laborer in order to get the same comforts of life, he must have forty-three per cent. higher wages, and even then is no better off, but only on a par with the foreign laborer. Nevertheless this advance in the expense of labor, while it has not benefited the laborer a penny, has rendered it impossible either to build or operate American ships, because on the free and boundless highways of the world they must compete with the ships of other nations who allow their laborers freedom to buy the comforts of life wherever they can find them best and cheapest.

Hence it is not bounties, nor subsidies, nor special exceptions, nor any finespun legislative contrivances that our people need to help them in foreign competition. Neither is it brains, nor courage, nor vigor, nor capital, for none of these has been found lacking in America when a fair chance could be had. It is liberty that is wanting—liberty to the laborer, however humble, to trade in the place that is best, or that he

thinks best, without the meddling of the Legislature or of the interested capitalists who strive to influence it; liberty to buy where and what he wants, and to sell where and when he pleases. Give back to the builder and navigator of ships this liberty, which was taken from him in 1862; restore to him the use on equal terms of the mighty natural resources of our country, and he will soon replace it in the position it had actually attained when the legislative power undertook to direct its commercial traffic—viz., first on the list of nations in maritime adventure and in commercial tonnage.

I. J. WISTAR.

PHILADELPHIA, December 10, 1881.

Notes.

HOUGHTON, MIFFLIN & Co., as the American publishers of the "English and Foreign Philosophical Library" (Trübner), have just brought out Barth's 'Religions of India' and Jacob's 'Hindu Pantheism,' which were briefly characterized in No. 857 of the *Nation*. The same house send us 'Seven Voices of Sympathy,' edited from the writings of Longfellow by Miss Charlotte Fiske Bates. The idea, suggested by the late James T. Fields, has been well carried out, and the volume is sure to make its way to those who need to be comforted and inspired. The arrangement is, first, prose extracts, and second, poetical; the translations from European poets coming last in each division.——A. D. F. Randolph & Co. offer a remarkably attractive edition of Bunyan's 'Pilgrim's Progress,' called the "Elstow edition," inasmuch as the cover contains a piece of oak from the discarded timbers of Elstow Church, in which Bunyan was some time a bell-ringer. But this is not all, though the wood is centuries old. Upon it is set a photograph from a pencil drawing made from life in 1679, which is regarded as the best likeness of Bunyan extant. Moreover, there is a careful and well-written sketch of the author's life, a brief bibliography of the 'Pilgrim's Progress,' a text critically selected, an index, and numerous engravings and fac-similes, historical and imaginative. In conception and execution, the edition seems completely successful.——Another English edition of the same work is published here by Scribner & Welford. It is a larger book, with larger type, but without critical apparatus of any kind. Its *raison d'être* is Stothard's vignette illustrations, reproduced in permanent photography by the same unpleasantly shiny process used for the Stothard designs in a companion edition of 'Robinson Crusoe.'——Ginn, Heath & Co. send us Shakspere's 'Coriolanus' and 'Cymbeline' in Mr. Hudson's expurgated edition ("Annotated English Classics"), and also the concluding volumes, xix. and xx., of the same editor's Harvard edition, of which the text is intact. Externally, the latter is in form and simple elegance a model of good taste. Mr. Hudson's part has been performed with equal judgment; his introductions to the several plays are remarkably direct and lucid summaries of the state of our knowledge concerning them, and his notes are restrained and yet sufficient. The series closes with an index to the words, phrases, and allusions explained in the foot-notes, which greatly facilitates the study of Elizabethan English. Altogether this edition will take a high rank among those intended for familiar reading.——N. W. Ayer & Sons' 'American Newspaper Annual' for 1881 is a very orderly and conscientious list of the American press in various groupings and subdivisions, and with such information concerning the area, soil, products, manufactures, and political complexion of localities as to leave nothing to be desired on the advertiser's part. It is, in fact, in its way a gazetteer. The foreign press is again catalogued by itself, and one can but be struck with the solid array of German periodicals, as well as with the growing French list, in which we should judge the titles proportionally, as well as actually, more numerous than in the Scandinavian.——There has been a marked improvement of late years in our school atlases in a very natural direction. Not only are the maps engraved and colored with greater care and effectiveness, but the atlas is adapted to all parts of the Union by providing special editions containing an enlarged map of any given State. Van Antwerp, Bragg & Co., Cincinnati, who have an excellent "Eclectic" series of this description, have had the good thought to combine all the maps, large and small, of the United States in one volume, called the "Eclectic Atlas." The geographical, statistical, and historical descriptions accompanying each State are very thorough, having been prepared by a local specialist, and the result is a work which is not only of great usefulness for the schoolroom, but meets a desideratum in every intelligent household. This atlas still lacks large-scale maps of Pennsylvania, New Jersey, Vermont, and some other States, but the publisher's intention is to add these in a subsequent edition or editions.——We have received from G. W. & C. B. Colton & Co. their new pocket map of Texas, which is on a scale of one inch to twenty-four miles, and when unfolded measures about a yard in each dimension. It strikingly exhibits the growth in settlement of this gigantic State, and—by means of a side map—shows how the Texas railroad system connects with that of Mexico. There can be no doubt that after an interval of nearly forty years this section of the country is once more about to attract the general attention, this time by reason of its resources and unlimited capacity for development.——One of the most effective expositions and defences of the civil-service reform movement yet made has been prepared as a pamphlet by Mr. W. E. Foster, the well-known librarian of the Providence Public Library, and published under the auspices of the Boston Association. It is in six chapters, which deny respectively that the reform is undemocratic, unconstitutional, impracticable, unbusinesslike, indefinite, unnecessary, destructive, or opposed to public sentiment, and it is fortified with a wealth of references to the literature of the subject. An appendix contains the Pendleton Bill, and there is an index.——The *American Architect* for November 26 contains a heliotype view of the interesting Fairbanks house in Dedham, Mass., built in 1636, and still occupied by the builder's descendants in the seventh generation. Needless to say that it is a wooden structure. The previous number, by the way, is largely given up to facts and scientific opinion on the wind-pressure of cyclones.——The fifth (and last but one) instalment of Stacke's 'Deutsche Geschichte' (New York: L. W. Schmidt) brings the thirty years' war to a close, and takes up the rise of the Brandenburg-Prussian power, carrying the chapter through the career of Frederic the Great. It is rich in old views of German cities, often a background to siege operations; in portraits of kings, generals, and statesmen, like Gustavus Adolphus, Tilly, Octavius Piccolomini, Wallenstein, Eugene of Savoy, Marlboro, Frederic William I. and his great son, etc.; in battle scenes, political caricatures, pictures of eighteenth-century manners and customs, after Chodowiecki's delightful vignettes, etc. Perhaps the most remarkable plate is the fac-simile of the first "Pilsener Schluss," with the signatures of Wallenstein's adherents.

—A natural and familiar group among the holiday books on our table consists of single well-known poems illustrated with woodcuts. The number, in all these years that we have been watching them, must now be considerable; but however much the engraving may improve, the designs still seldom rise above mediocrity. The poorest on our list is 'The Cotter's Saturday Night' (Porter & Coates), in the making of which neither ideas nor taste are visible. The same firm's 'The Bells' is more ambitious, and is not quite void of imagination, but on the other hand more preposterous ideas of bell-hanging were never met with outside of Bedlam. Mrs. Browning's 'He Giveth His Beloved Sleep' finds an interpreter in Miss L. B. Humphrey, who is perhaps the most assiduous cultivator of this sort of decoration. The "tired child" of the present volume represents her high-water mark, as we remember, but she continues to show her lack of training in drawing the human figure, and in other respects her talent is far from robust. A partnership in which the landscape is left to Mr. J. F. Murphy, and the figures to Miss C. A. Northam, is exhibited in Jean Ingelow's 'Songs of Seven' (Roberts Bros.); but it is a very unequal alliance, for Mr. Murphy's work is much the better of its kind, is marked here by one or two quite successful vignettes, and in its largest scope, also, shows a genuine sympathy with nature. It were hard to say what artistic greatness would be needed to make up for the poetic flatness of Ellen M. H. Gates's 'Your Mission' (Putnam's), but we are bold to affirm that the actual designs inspired by her half-dozen stanzas do not redeem these or justify making a book of them. Mr. Buchanan Read's 'Brushwood' (Lippincott) offers a certain scope to an artist familiar with Italy, but there is nothing in Mr. Frederick Dielman's illustrations to warrant the conclusion that he was ever "on a weary slope of Apennine," or indeed in any part of the classic peninsula; or that he has derived his personal and landscape "properties" from any other source than pictures. Nor are they in any way remarkable for draughtmanship, fancy, or pathos. In Thackeray's 'Chronicle of the Drum' (Scribner), a far more serious, elegant, and elaborate performance than any of the foregoing, it is observable that while the chronicle proper is full of illustrations, the moral or epilogue has but one; and yet the real drum-beat of the ballad is to be found in the poet's moralizing over slaughter and "glory." Nobody's pulses can be greatly stirred by his rather lumbering summary of French military history, in which even the versification goes hard from inability to deal throughout with female rhymes; but when "old Pierre" is got rid of, and the metre changes, we feel that Thackeray himself at last holds the sticks, the verse becomes nervous, and the reader's flagging interest is roused and held to the end. What thrills him has, as it happens, no inspiration for the artist, and the honor of so much careful drawing and costly engraving is thus really bestowed upon the inferior part of the poem. The point is at least a curious one; but whether it is more than that we will not stop to inquire now. The number of artists engaged in this enterprise has not prevented a tolerable homogeneousness in their work. Mr. Pyle perhaps deserves the highest praise for the "restorations" to which he is so much and so successfully addicted, and in a melodramatic fashion his night view of the guillotine is the most effective of all the symbolic attempts. The head and tail pieces, mostly trophies, are prettily conceived, and the book is tastefully made up throughout.

—Owen Meredith's 'Lucile' is always a favorite with many readers—those who like plenty of lords and ladies, and of high life at for-

eign watering-places, and who also like to have this gay society attuned to high sentiments, leading at last to the triumph of the truly virtuous. There is not much more than this in 'Lucile,' but this is something, and it is certainly a poem which lends itself readily to illustration. In some respects this new edition (Osgood & Co.) has very rare merits in its artistic execution, but the illustrations pass too readily from the sublime to the ridiculous. The two young men who appear singly, in the engravings, as persons of fashion and elegance, are represented together (on page 196) in the guise of two drunken footmen, returning home from a carouse; while the heroine herself is now a robust young damsel at the piano, and then a pallid nun among the rocks. Would it not be safer, in preparing an illustrated book, to entrust each personage to one artist, on pain of death in case of any varying representation? However, we gladly recognize 'Lucile,' with whatever faults, as the most creditable illustrated book that has lately met our eyes. We ought also to speak here of a sort of pale parody on Owen Meredith's book, under the name of 'Geraldine: a Souvenir of the St. Lawrence' (Osgood)—a parody all the more interesting because the resemblance is alleged in the preface to have been unconscious. The hero is an American lecturer, trying as hard as *Bunthorne* in the play to extricate himself from his female adorers, and a good deal of it reads like the less offensive parts of the Beecher trial; the lovers and ladies and rivals having endless metaphysical discourse, sometimes in very lonely places and at very late hours, with a great deal of Platonic embracing, but without guile.

—To pass to other illustrated books, Bayard Taylor's 'Home Ballads' (Houghton, Mifflin & Co.) contains a series of poems written by that too imitative poet, and irresistibly recalling the better and stronger work of Tennyson. The figure-pieces among the illustrations are a little tame and homely, as befits the themes; but some of the landscapes are full of grace and feeling, while retaining perfectly the local characteristics of the Pennsylvania farm regions. The local coloring is also strong in 'The Hudson,' by Wallace Bruce, with illustrations by Alfred Fredericks (Houghton, Mifflin & Co.). The poetry is here mediocre, but the engravings are all taken from original pen-and-ink sketches by a single artist, and have therefore more of unity and of expression than is usual in such books. 'Hannah Jane,' by David Ross Locke (Lee & Shepard), is a poem not unlike Bayard Taylor's in character, and one that has perhaps taken a stronger hold on the popular heart; here also the landscape illustrations are the best. In 'Grandma's Attic Treasures: a Story of Old-Time Memories,' by Mary D. Brine (E. P. Dutton & Co.), the verse is of a prolonged and rather rugged description, but many of the landscapes and some of the figure-pieces are very pleasing, while the artist fairly revels in old arm-chairs and spinning-wheels. It is plain that the romance of domestic antiquity is to reign for some years yet in architecture, art, and literature.

—The illustrations are of the least possible consequence in the 'Poems by William Wordsworth,' published by W. J. Johnston, and edited with an introduction by Mr. Richard H. Stoddard. They have various qualities, among which we do not find newness, and the best are those which are from the pencil or in the manner of Birket Foster. The large type shows at a glance that we are dealing only with selections from the great body of Wordsworth's verse. One need not look here, for example, for "The Leech-gatherer," nor the elegiac stanzas on a picture of Peele Castle, nor for any but the least portion (numerically speaking) of the sonnets. Mr. Stoddard's theme is the blank in nature-poetry from the time of Milton to that of Wordsworth. Mr. Stoddard is also the author of two articles in the attractive volume just published by D. Appleton & Co., 'The Homes and Haunts of Our Elder Poets.' Here he treats of Longfellow and Whittier, as Mr. H. N. Powers treats of Bryant, and Mr. F. B. Sanborn of Emerson, Holmes, and Lowell, with this difference, that while his aim and method are almost exclusively critical, his colleagues are more concerned with personal details. This gives variety to the book, and as Mr. Stoddard's judgments are in general sound, and Mr. Sanborn in particular has nothing to communicate that is not interesting, and much that is intimate and (as in Lowell's case) novel, the result is a work which any one may take pleasure in reading and in owning. We cannot say of our own knowledge what proportion of the six papers now appears for the first time; but the readers of *Scribner's Magazine* will at least recognize the major part of the illustrations. The portraits, unhappily, are least successful. Lowell's is inadequate and hardly passable, while Mr. Wyatt Eaton's hazy series of heads fall a good deal short of what the same pains and ability on the engraver's part would have made from first-rate photographs. The typography and presswork are excellent. Mr. George Barnett Smith's two volumes of 'Illustrated British Ballads' (Cassell) have been derived partly from classic collections like Percy's 'Reliques' and Scott's 'Border Minstrelsy,' but are also indebted in a very considerable degree to the poets of the last hundred years, and particularly of the present century. Thus, among the living may be named Tennyson, Browning, Matthew Arnold, Aubrey de Vere, Swinburne, Morris, D. G. Rossetti, Robert Buchanan, Charles Mackay, Jean Ingelow, etc.; following Coleridge, Southey, Wordsworth, William Blake, Keats, Campbell, Byron, Moore, Hood, Hemans, Scott, James and Horace Smith, Praed, Motherwell, Thackeray, Sidney Dobell, and a long line of elders backward from Cowper and Goldsmith to Drayton. The bare enumeration is a guarantee of the worth of Mr. Smith's collection, which is arranged in a *quasi*-alphabetical order (by titles), and has an index of first lines, but not of authors. Each ballad is introduced by a brief account of its origin or composer. The running illustrations are fairly good examples of the British school of design and wood-cutting; for frontispieces two etchings are given.

—The Paris Union Centrale des Beaux-Arts gave last year a technological exhibition, made up of loans from private collections, with reference to the artistic employment of metals alone, in all ages. One contributor sent as many as 500 objects, and the total number was something near 10,000. Next year the line will be ivory, wood, etc., and in 1884 stone, glass, porcelain, etc. Along with finished masterpieces are shown the tools and the methods of working, and the result is at once a glimpse of the world's progress or movement in the arts, and a lesson in the processes by which the various branches are maintained at the present day. This exhibition of 1880 has been used as the basis of a work originally more ambitious than it proved in the sequel, 'Les Arts du Métal' (Paris: Quantin; New York: J. W. Bouton). This folio—or portfolio, as it might be called, for the sheets are not bound in with the covers—consists of a preface containing a rapid summary of the growth of the arts presently to be illustrated, with allusions to striking examples in the late exhibition of the Union Centrale, and with a few drawings or engravings of these in the text. Then follow the plates in heliotype, if that is the name of the process, each with its sheet of descriptive letter-press. This part is unqualifiedly beautiful and instructive, beginning with antique bronzes—statuary, vases, and the like—and carried on through enamels, the very curious and grotesque yellow copper vessels (called *dinanderie*) used for holding hot liquids, knockers of noble design, plaques, some fine specimens of clocks, charming iron-work in keys and locks and cutlery, articles of furniture in metal, a remarkable Japanese bronze piece with tripod, doves, and peacocks, etc. The department of moneys and medals, in which the exhibition was conspicuously rich, is here unrepresented, but the specimens just enumerated will repay long and loving study, and convey an idea of the enormous value of the store from which they were mediately and immediately borrowed. Of one of the tributary collections it is said that it could furnish forth a municipal museum.

—Although the season for out-of-door sports is past, the fact that lawn tennis is being vigorously played day and night at various armories in this and other cities proves the remarkable popularity of the game, and makes a reference to it not altogether untimely. Messrs. Strahan & Co., of London, have recently published a little book entitled 'Lawn Tennis: Its Players, and How to Play,' by Lieut.-Col. Osborn, which the many votaries of the game in this country may study with profit. The writer shows how lawn tennis descended, from the sky or elsewhere, upon a generation that had grown tired of skating-rinks and croquet and was thus peculiarly prepared for a new game; how the first experts in it won their laurels by "cutting," and the present champion of England, Mr. W. Renshaw, by "volleying"; and how his play in other respects differs from that of several other celebrated English players. The story is well told, and will interest not only the expert tennis-player, but the veriest beginner, in whose mind the idea of a "bisque" is not yet dissociated from clams. The game has so many attractions for both sexes and for almost all ages and sizes that it is tolerably safe to predict that its popularity will be permanent. It provides any required amount of exercise in a comparatively short space of time and at a moderate cost, and it is as yet free from the incubus of "leagues" and professional players.

—The value to be attached to "Professor" Vennor's much-vaunted key to the weather, and to all his utterances based upon it, may be judged by collating these two contradictory predictions concerning the present month. From the Almanac for 1881:

"The characteristics of December probably will be those of the preceding two months. This, I believe, will be one of those Decembers that will cause inquiry of the oldest inhabitant as to whether there ever had been such a December before. In Canada *flowers* may be discovered *in bloom in the open garden*, and ploughing will be continued almost up to Christmas."

In his new Almanac for 1882, published three months ago, he goes to the opposite extreme:

"DECEMBER, 1881.—I hardly like the look of this month, viewed from the present standpoint (Sept. 18). It looks ugly, and smacks of cold—*bitter, biting cold*, north and south, east and west. The month bids fair to be cold and dry rather than otherwise, and this cold may be somewhat proportionate to the heat of the past summer, and extend to extreme southern and western points. The entry of the month is likely to bring in winter abruptly in most sections where winter is usually expected and experienced. The first week of the month will probably give the first good snow-falls of the season in New York."

One or other of these forecasts must prove to be partially correct; and the Canadian will point with pride to that one and say nothing of the other, "as December is an important one of the

winter months, and one about which I am particularly careful." It may not be amiss to remark here that the winter change (*alias* "November wave") occurred this year early in October, instead of at its usual date, approximately November 1.

—In a recent number of *Unsere Zeit*, Gerhard Rohlfs, who holds a similar position as an authority in relation to North Africa to that which Vámbéry does to Central Asia, strongly advocates the annexation of Tunis by the French, as absolutely essential to the peace, if not the existence, of the colony of Algeria. He maintains that Tunis is in reality a part of Algeria, whether considered in its geographical, geological, or ethnographical relations, and recalls the fact that up to the conquest of the latter country in 1830, Tunis was for centuries tributary to it. The boundaries of the colony, both on the east and the west, are purely artificial, in each case dividing great tribes, so that some families are subjects of France and others are subjects of the Bey of Tunis, or of the Sultan of Morocco. Naturally this political division is little regarded by the Arabs, and to this day the official prayers on Friday in the mosques throughout Algeria are offered, not for the President of the French republic, but for the Sultans of Morocco and Turkey, and this in spite of every effort on the part of the French to prevent it. He advocates a strong repressive policy against the insurgents, and heartily commends the destruction of the sacred tomb of the Sheikh Sidi, and the occupation of Kairouan, both measures which have provoked much hostile criticism in France and England. The French have erred heretofore, in his judgment, on the side of leniency, and have pardoned and decorated the leaders of revolts whom they should have sternly punished. He not indirectly hints that the annexation of Morocco is the next step which the French will be obliged to take, holding that peace under Christian rule in Algeria is impossible so long as the countries on its borders are governed by Mohammedans. Here we may recall the fact that Captain Colville, in the account of his travels through Morocco published last year, drew attention to the measures which the French were taking with a view to the future occupancy of the country. Another German writer of some note, who has also made a study of North African politics on the spot, Carl Vogt, vigorously supports these views in an article in the October number of *Unsere Zeit*, though he sees greater difficulties for the French in carrying out their present policy than the distinguished traveller seems to anticipate. With the latter he condemns the policy, pursued under the Empire and to a great degree under the Republic, of sustaining the chiefs in their power, especially by large concessions of land. That this has greatly interfered with the prosperity of the colony he shows from a semi-official paper by Dr. Liotaud, the president of the Algerian Agricultural Society, which closes with an earnest appeal to the Government to give the absolute ownership of the land to the peasant who will cultivate it, as his only possible escape from the grinding tyranny to which he is subjected by his chiefs.

—We called attention not long since to a movement on the part of the German librarians to establish a national library at Berlin, at the expense of authors and publishers, by means of the copyright law. Publishers have complained bitterly of the injustice of the deposit of five copies of each new book, in as many libraries, required in England; but this does not prevent similar schemes from being proposed in other countries. Even before the German movement a more thoroughgoing idea had been mooted in France. The *Moniteur* has proposed, in the coolest way, as the National Library has not funds enough to bind the works which the French publishers deposit merely sewed in paper covers, as French books usually are on their first appearance, that publishers should be obliged to present their books bound. It would be an additional charge, the *Moniteur* acknowledged, but it would not be more than ought to be demanded, considering, first, that all authors draw more or less upon the common stock of literature, and ought to allow others hereafter to draw from them, *lampada tradere*, and, second, that they ought to be very glad that there is one place where their titles to literary fame will be carefully preserved, and so, in the interest of their own glory, would do well to present the documents in a form suitable for preservation. As to the details of the operation, it is proposed, in order to secure uniformity, that publishers be obliged to bind the presentation copies at binderies designated by the library, in such style as the library shall indicate, the binding being assigned once a year to the lowest bidder.

—The first or prose volume of Prof. Aristide Baragiola's 'Italian Chrestomathy' (Strassburg) is divided into three departments—viz., 1, Ancient and Modern Language; 2, Polite Tuscan Language; 3, Dialects. First in order come brief paragraphs by famous authors—dialogues, fables, and letters on various subjects, which render the book useful as a manual of instruction and "First Reader." Next, in the literary department, which is progressively arranged with unusual system and scholarly taste, articles on all sorts of topics from the best ancient and modern authors are contrasted, to teach the foreigner differences in linguistic and literary style, and are made doubly valuable to the *litterateur* by notes full of historical information. The classical, modern, and romantic schools are illustrated in selections made with a view to exhibit not only the Italian language in its variety, but its growth and peculiarities arising from the customs of the people in the different parts of Italy. Thus, in the case of Manzoni, who belongs to the Romantic school, a curious change in language is shown in the early and the late corrected edition of 'I Promessi Sposi.' Teachers will find this Chrestomathy of a higher order and more interesting to beginners than the average. Accents are fully given, and the different dialects are compared to modern Tuscan, so that they may be easily learned by analogy. The book in every respect is original, clear, and comprehensive, desirable for general reading, and worthy of the first rank among works on literature and education.

—Schubert's B minor entr'acte from "Rosamunde" served as a good introduction to the second concert of the Philharmonic Society on Saturday night. When this music was for the first time played in Vienna (1823) in connection with the "romantic play" for which it was written, a wise critic observed that "at present Herr Schubert is too much applauded; hereafter may he never complain of being too little recognized." Had Herr Schubert been present at Saturday's concert, he would hardly have felt inclined to complain that his beautiful melodies and fine orchestral combinations were insufficiently appreciated, or that Mr. Thomas's orchestra failed to give prominence to all the interesting details. He would have admitted, too, that America was making rapid progress in music had he seen two of the first violins of this orchestra (Messrs. Brandt and Arnold) rise at the end of his piece and play a D minor concerto for two violins by Bach, with a thorough comprehension of the author's intention and a perfection of technique that many a travelling virtuoso might have envied. Bach has shown in many of his compositions, as, *e. g.*, the last chorus of his Passion music, that he can stir the soul as deeply as any master. Works like this concerto, however, appeal less to the emotions than to the intellect, which delights in tracing the outlines of the beautiful pattern by pursuing the thread of melody as it appears curiously interwoven among the various parts. Intellectual works of this sort have one advantage over the emotional in that they do not pall on the hearer, and can be appreciated in almost every mood after a hundred or more repetitions. Attention may also be called here to the simple and noble endings which Bach's compositions have in common with those of the modern German school, and which distinguish them favorably from the artificial and stereotyped cadences of the Mozart-Beethoven period. A first performance of Rubinstein's Fifth Symphony, in G minor, op. 107, followed the concerto. For a symphonic work it is so uncommonly simple in structure that a musician of ordinary intelligence can "take it all in" at the first hearing, although it is too good a work not to gain by repetition. It owes its simplicity to some old Slav melodies which form some of its themes, and to which its name of "Russian Symphony" is due. Its faults are a lack of sufficient contrast in the rhythmic movements and a certain monotony of coloring. We would hardly go so far as Dr. Hanslick, who once spoke of Rubinstein's orchestral colors as "dirty"; but the great pianist's prejudice against certain tendencies in modern music seems not only to have diminished the success of his operas, but to have prevented him from utilizing some of the more recent discoveries in orchestration. He usually employs his brass instruments in the primitive and imperfect manner of Schumann, and fails to make proper use of the rich undercurrent that can be given to piano passages by their subdued and sustained harmonies. There is consequently too great a predominance of the strings, which is not often enough relieved by such charming passages as the introduction to the Andante. Barring these imperfections, the symphony is a delightful work, full of little surprises and interesting episodes, and we hope to meet with it frequently on the programmes of these concerts. Previous to a capital performance of Beethoven's popular Leonore overture No. 3, which closed the concert, Signor Galassi sang a selection from Wagner's "Flying Dutchman" in his usual broad and noble style. That Mr. Thomas thanked him by shaking hands with him at the end, both at the rehearsal and the concert, must have been as highly prized by him as the applause of the audience. The passage chosen is so essentially dramatic in its nature that something would have been gained if the situation had been explained in a few words on the programme. It is sad enough that New Yorkers are obliged to hear such things on the concert stage if they wish to hear them at all; but in the present state of affairs a few hints given on the programme will enable any person with a trace of imagination to construct a more realistic and satisfactory picture of the scene than he would be likely to witness at the Academy of Music, were the attempt made to produce this opera there.

OLIVER CROMWELL.

Life of Oliver Cromwell. By F. W. Cornish, M. A., Assistant Master at Eton College. With maps and plans. London: Rivingtons.

CROMWELL'S career bears a strange character of paradox. The most fervently religious ruler who has ever governed England, he yet excited, both in his lifetime as after his death, suspicions of profound hypocrisy; the most successful leader of men who has ever risen from private life to supreme power (for his whole course from the beginning of the civil wars down

to the day of his death is not marked by a single failure), he has yet left it open for doubt and discussion whether he can make good his claim to a place among statesmen of the first rank.

Carlyle has dispelled forever the stupid delusion, generated by party spirit and kept alive by popular ignorance, that the man who held the foremost place in England at the greatest crisis of her destiny was no better than a Puritan *Tartuffe*. But any one who reads attentively Mr. Cornish's admirable little 'Life of Oliver Cromwell' will learn even more easily than from the pages of Carlyle's elaborate work that, if Cromwell's faults no less than his merits are to be really understood, one must admit not only that he was no hypocrite, but also that he was more truly under the influence of religious sentiment and religious ideas than any other person who could be named in the long line of English monarchs or English ministers. Luther, Knox, Bunyan, Baxter, and Wesley were not more truly men of religion (which is a different thing from saying they were not better men) than the Lord Protector. On this matter his public addresses may be set aside by any one who thinks that their pious phraseology was, though not hypocritical, yet conventional, and intended to meet the taste of an audience of Puritans. Oliver's private writings, and the recorded expressions of his every-day life, are quite sufficient to establish the reality of his religious convictions. That, after a possibly somewhat wild youth or boyhood, he during early manhood went through what he always believed to be a process of conversion, is certain. "Oh, I lived in and loved darkness and hated light. I was a chief, the chief, of sinners. That is true. I hated godliness, yet God had mercy on me." Can any human being doubt that these words expressed Cromwell's real feeling?

It may, indeed, be fancied that early fervor passed away with advance of years and increased experience of the world. Whoever entertains this thought should read Cromwell's letter to his brother-in-law on the death of that gentleman's son:

"God hath taken away your eldest son by a cannon-shot. . . . Sir, you know my own trials this way; but the Lord supported me with this, that the Lord took him into the happiness we all pant for and live for. There is your precious child, full of glory, never to know sin or sorrow any more. . . . Truly he was exceedingly beloved in the army of all that knew him; he is a glorious saint in heaven, wherein you ought exceedingly to rejoice. Let this drink up your sorrow, seeing these are not feigned words to comfort you."

This was his language in the very midst of the civil war. These words, written by a father who had himself lost his own son, to a near relative mourning over the death of a child, are assuredly the expression of the truest feeling. A year or two later he shows himself filled with anxiety (which was not misplaced) as to the character of his son Richard. "I would have him mind and understand business, read a little history, study the mathematics and cosmography; these are good, with subordination to the things of God; better than idleness or mere outward worldly contents. *These fit for public services, for which a man is born.*" To his daughter-in-law he writes on the same day: "I desire you both to make it above all things your business to seek the Lord, to be frequently calling upon Him, . . . and be listening what returns He makes to you; for He will be speaking in your ear and in your heart if you attend thereunto. I desire you to provoke your husband likewise thereunto. As for the pleasures of this life and outward business, let that be upon the bye." Expressions like these, used in a letter never intended to meet the public eye, tell their own tale. The writer may be a self-deceiver, his conduct may fall far short of his own moral standard, his views of duty may themselves be tinged with fanaticism or unscrupulousness; but to suppose that he is not really concerned for the state of his own soul and for the spiritual welfare of those he loves, is utterly to misread human nature. Nor did Cromwell's death-bed in any way belie his life. Theological speculations, religious thoughts, religious anxieties, and religious consolations filled his mind as completely when he lay a-dying as at those seasons, not unfrequent with him, of spiritual exaltation, when he saw in his own triumphs the signs of God's approval and support:

"He spoke of the two Covenants of Grace and of Works. 'They were two,' he was heard ejaculating; 'Two, but put into One before the Foundation of the World!' And again, 'It is holy and true, it is holy and true, it is holy and true! Who made it holy and true? The Mediator of the Covenant!' . . . When his wife and children stood weeping round him, he said: 'Love not this world. . . . Children, live like Christians; I leave you the Covenant to feed upon.' And again: 'Lord, Thou knowest if I do desire to live it is to show forth Thy praise and declare Thy works.' Once he was heard saying, 'It is a fearful thing to fall into the hands of the Living God!' This was spoken three times, says Harvey. . . . Thrice over he said this, looking into the Eternal Kingdoms: 'A fearful thing to fall into the hands of the Living God!' . . . But again: ' . . . The Lord hath filled me with as much assurance of His pardon and His love as my soul can hold. . . .'"

On his death-bed, as during his life, Cromwell used language which in any other man we should take as the unmistakable sign of fervent and sincere religious feeling, and is there the least reason to suppose that the demeanor of an enthusiast was the mask of a hypocrite? Critics will to the end of time differ in their estimate of Cromwell's moral worth; but there are, we suspect, few persons, of whatever school, who, knowing his acts and words, can now doubt the sincerity of his religious fervor. But to grant that Cromwell's words were the sincere expression of genuine feeling, and even of genuine conviction, increases rather than diminishes the difficulty of fully understanding his character. He excited by turns the distrust of almost every eminent man in the state. Royalists, Presbyterians, Republicans, Fifth-Monarchy men, each and all, with reason or without reason, accused him of treachery. The difficulties of his position had indeed a good deal to do with this. He possessed, it may be urged with some truth, wider views and wider sympathies than most of his associates. Still, to suppose that a whole generation of very able men were all mistaken in their judgment of the leading man of his country, involves something very like an absurdity. We may be sure that if Cromwell was distrusted by men like Fairfax, Lambert, and Harrison, who had stood by him at the most desperate crises of his career, there was something in him which inspired distrust. Nor, if you look the matter fairly in the face, is it hard to discover what this "something" was.

Cromwell's intellect was subtle, and his whole manner of dealing with men indirect. At every stage of his career may be seen traces of that sort of artfulness which admirers may term policy, but which foes call craft. He had, as Mr. Cornish has well brought out, extraordinary skill in managing others. "No man ever used men more for his own ends. We believe that his ends were in the main wise and good, and that he sought them sincerely, but he used men as he found them, and turned the folly of fools and the knavery of knaves to his own ends without scruple; and this he held to be lawful." Combine this power of management, or, in other words, taste for intrigue, with the kind of subtlety often accompanying intense religious enthusiasm, and you have just the man who legitimately enough excites suspicion among his fellows. Any one who also remembers that Cromwell avowedly looked upon outward success as the sign of heaven's favor, and almost certainly believed that, to use Mr. Cornish's language, "he had been raised up from among the people to accomplish a work for God who had prospered it in his hands and borne witness to it, and that to God and not to men he was responsible for his ends which he knew were great, and his means which were not those of common men," will partly at least understand how it happened that the Protector, who extorted admiration from his foes, and who was the one man upon whom his adherents could rely for the support of the good cause, was never able to convince either enemies or supporters of his perfect sincerity.

Cromwell aptly compared himself to a chief constable. His function was to give rest to the country, torn by factions and exhausted by civil war. The aim of his policy was, from his own point of view, to effect a permanent settlement, which should unite England, Scotland, and Ireland in one state, should create a strong executive and a well chosen Parliament, and should above all things permanently secure to all Protestants freedom of conscience. That this was in the main Cromwell's view of the end to be attained is clearly seen from the "instrument of government," or constitution of 1653, which more truly than any other of the arrangements which he attempted to effect expresses Cromwell's own ideal, before he was corrupted by despotic power, of the kind of government required by England. His conception of the object to be aimed at was a noble one, and marked by sound judgment and wisdom. That he utterly failed in attaining this object is a fact patent on the very surface of history. Of the work of the Long Parliament a good deal more than is generally supposed survived the Restoration, but Cromwell's own work crumbled to pieces at his death. In every single transaction of his life he was successful; but all his attempts to secure to England the objects for which the civil war had been waged ended in absolute failure.

Want of success is not of itself conclusive evidence of a ruler's want of statesmanship. The fair criterion by which to test the political capacity of a Cromwell is, to examine whether the expedients by which he met critical difficulties were or were not consistent with the attainment of the main aims of his policy. Tried by such a standard, Cromwell can hardly claim a very high rank among the great statesmen of the world; for it is all but certain that at least on three occasions he adopted measures which made the permanent establishment of such a system of government as he desired to found in England impossible. The execution of Charles I. was Oliver's first and his greatest error. Of the justice or injustice of the act we say nothing. What is as certain as anything of the kind can be is that the death of the King was a deadly blow to the Commonwealth. It made it impossible for the most influential part of the English nation to rally round the new government; it infinitely increased the chances of a restoration. The nation would probably enough have been prepared in 1660 to recall even Charles I., but the army, the Independents, the Presbyterians, whether in England or Scotland, could not have brought back into power the very despot whom they had dethroned. It was possible for good men and sensible men to be deceived by the professions and the lies of Charles II. No sane man who had fought for the Parliament could have been deceived by the protestations of Charles I. The

King would have been far less dangerous as an exile than as a martyr. The question is one which can happily be decided by an appeal to something stronger than *à priori* argument. The fate of James II. proves that had Charles been banished, neither he nor any of his family would ever have returned to England.

Cromwell's second mistake was his fatal breach with the whole Republican party represented by men like Vane and Ludlow. The execution of the King made it hopeless for the moment to reconcile the mass of the people to the rule of the Puritans. The only other chance of securing English freedom, and still more of securing liberty of conscience, lay in the union of the whole Puritan party. The Republicans, it may be admitted, were in many respects impracticable, but they were after all many of them men of high patriotism and of considerable capacity. They were Cromwell's natural friends and allies; he turned them into his most deadly foes.

A third error, very characteristic of Oliver's merits no less than of his weakness, is his singularly inconsistent mode of dealing with the Parliaments which he himself convened. He had no mind to be a tyrant. He deemed, like other Englishmen, that a Parliament was an essential part of the proper government of the country. Again and again he convened assemblies which he hoped might act with him and take away from his rule the stigma of arbitrary power. But he was utterly unable to respect his own Parliaments. He may have found it absolutely impossible to act with the men elected under the instrument of government; but there is not the least sign that he made any vigorous effort to avert the break-down of the Constitution. He ought to have known that this break-down almost of necessity involved the final failure of his whole policy. That he did not perceive that in destroying the Constitution of 1653 he was in fact sacrificing his last chance of escaping the doom of sinking into a tyrant, is likely enough. But that he should not have seen this, is fatal to any claim on his behalf to the possession of statesmanlike foresight.

Cromwell's errors, moreover, are not isolated mistakes, inconsistent with the general tenor of his life. They are all of them the errors of a man made rather to be a ruler or a general than a politician or a statesman. At every crisis of his fortunes Cromwell displayed great insight into individual character, extraordinary decision in taking bold resolutions, and unrivalled vigor in carrying them into effect. But he was, as has been said about an eminent man of a very different type, clear-sighted rather than far-sighted. He liked and excelled in bold strokes, but he does not seem to have calculated what might be the ultimate evil results of acts which at the moment were crowned by success. Hence, oftener than most men of anything like his powers, he came into conflict with the nature of things. His death, indeed, was unexpected, and it is of course possible, though far from likely, that had he lived for ten or fifteen years longer, he might have placed his power and the system of government connected with it on a permanent basis. The fact, however, remains that in spite of the apparent stability of the Protectorate, each year increased the number of the Protector's enemies. With the Cavaliers reconciliation was impossible; the Presbyterians were hopelessly estranged; the Republicans were Oliver's deadly enemies; of his tried associates, of the men who had stood side by side with him in the civil war, hardly one remained his friend. The major-generals were picked men from among his most zealous supporters; yet, with a strange inconsistency which looks too like one of the caprices of despotism, Cromwell contrived to insult even the major-generals. Cromwell stood alone, the sole, and during his lifetime, the sufficient defender of the Protectorate. His death left his whole scheme of government unguarded by anything but the fame of his own great name. Such a result sets in full relief the immense force of his own personal character, but it none the less betrays the inherent weakness of his statesmanship.

RECENT POETRY.

POPE's aspiring young poet in his lofty garret, who must needs print his verses,

> "Oblig'd by hunger and request of friends,"

would have viewed with surprise a dozen or more thin volumes that stand before us. The beauty of their outward aspect shows that they must have been printed quite regardless of hunger, and to satisfy the urgency of friends alone. The public at large will never hear of them; they are not in any true sense published, for it would be impossible to publish them. It is impossible to find in them a page that holds anything but the most commonplace thoughts expressed in lines of prescribed length. They have, to be sure, all the negative merit attributed to the idyllic poet's verse in the burlesque opera of "Patience"; there is not in them a line which could bring a blush to the cheek of innocence; and this, during a year which reprints Walt Whitman, is perhaps to be counted for righteousness to these humbler bards. But beyond this there is nothing to be said of them; it is needless even to name their names.

Other volumes of a similar general grade have certain salient qualities, as in 'The Rivulet and Clover Blooms' (American News Company), a dingy little book, whose earnestness and simplicity appeal all the more to the sympathies from the poverty of type and paper; or 'Over the Hill to the White House' (Denison), a rhymed memoir of Mrs. Garfield the elder. There is power in 'Three Vows,' by William Batchelder Greene (G. P. Putnam's Sons), yet certainly not in an agreeable form; it would be difficult to write anything much grimmer than the Norse poem, "Satan of the Sea," included in this volume. There is a pleasant effect of cultivation and travel about 'Persephone, and Other Poems,' by Mrs. Charles Willing (Lippincott). 'St. Olaf's Kirk,' by George Houghton (Houghton, Mifflin & Co.), and 'Giorgio, and Other Poems,' by Stuart Sterne (Houghton, Mifflin & Co.), give renewed proof of the attractiveness of a long poem to its composer, and of the difficulty of making it equally attractive to the general reader. Wherever a title-page announces "and other poems," every one turns instinctively to those. In the case of Stuart Sterne (understood to be the *nom de plume* of Miss Bloede) there is a good deal that arrests attention in the shorter contributions, and the mere title of the poem "To a Figure-Head" has certainly a charm for the imagination, so that one wonders why so good a theme has never before been treated:

> "Oh! solitary woman, all alone
> In thy strange empire 'twixt the sea and sky,
> 'Neath the fierce darts the sun sends from his throne,
> Or the cold smile of midnight stars on high."

We have read anew, from a sense of duty, the original and unexpurgated 'Leaves of Grass,' by Walt Whitman, as now reprinted, with some milder additions (Osgood). It cannot be said of them, as Sir Charles Pomander, in 'Christie Johnstone,' says of his broken statues, that "time has impaired their indelicacy." This somewhat nauseating quality remains in full force, and we see no good in their publication except to abate the outcries of the Liberal League against Mr. Anthony Comstock and his laws respecting obscene publications. So long as 'Leaves of Grass' may be sent through the mails, the country is safe from over-prudery, at least. Mr. Whitman is often ranked with the "fleshly school," and his circle of English admirers is almost identical with the coterie whose apostles are Swinburne and Wilde. But the erotic poems of these authors are to those of Whitman as rose-water to vitriol. The English poets have at their worst some thin veneering of personal emotion; with Whitman there seems no gleam of anything personal, much less of that simple, generous impulse which makes almost every young man throw some halo of ideal charm about the object of his adoration. Whitman's love, if such it can be called, is the sheer animal longing of sex for sex—the impulse of the savage, who knocks down the first woman he sees, and drags her to his cave. On the whole, the condition of the savage seems the more wholesome, for he simply gratifies his brute lust and writes no resounding lines about it.

Leaving this disagreeable aspect of the matter, we are impressed anew, on reading these poems, by a certain quality of hollowness, which is nowhere more felt than in the strains called "Drum-Taps." It would be scarcely worth while to bring these strains to any personal test, perhaps, did not Mr. Whitman's admirers so constantly intrude his personality upon us; but we cannot quite forget what Emerson says, that "it makes a great difference to a sentence whether there be a man behind it or no." When Mr. Whitman speaks with utter contempt of the "civilian" (p. 252), and claps the soldier on the back as "camerado" (p. 251), we cannot help thinking of Thackeray's burly and peaceful Jos. Sedley at Brussels, just before the battle of Waterloo, striding and swaggering between two military officers, and looking far more warlike than either. One can be aroused to some enthusiasm over the pallid shop-boy or the bookish undergraduate who knew no better than to shoulder his musket and march to the front in the war for the Union; but it is difficult to awaken any such emotion for a stalwart poet, who—with the finest physique in America, as his friends asserted, and claiming an unbounded influence over the "roughs" of New York—preferred to pass by the recruiting-office and take service in the hospital with the non-combatants.

When we come to purely intellectual traits, it is a curious fact that Mr. Whitman, by the production of one fine poem, has overthrown his whole poetic theory. Dozens of pages of his rhythmic prose are not worth "My Captain," which among all his compositions comes the nearest to accepting the restraints of ordinary rhyme. His success in this shows that he too may yet be compelled to recognize form as an element in poetic power. The discovery may have come too late, but unless he can regard its lessons he is likely to leave scarcely a complete work that will be remembered; only here and there a phrase, an epithet, a fine note—as when the midnight tolling for General Garfield is called "The sobbing of the bells." These are the passages which his especial admirers style "Homeric," but which we should rather call Ossianic. The shadowy Gaelic bard rejected the restraints of verse, like Whitman, and reiterated his peculiar images with wearisome diffuseness and minuteness. To be sure, he was not an egotist, and he kept within the limits of decency; but he gave fine glimpses and pictures, while there was always a certain large, free atmosphere about all his works. They were translated into all languages; he was ranked with Homer and Virgil; Goethe and Napoleon Bonaparte were his warm admirers—and the collections of English poetry do not now include a line of his composing. If Whitman, after the

same length of time, proves more fortunate, it will be because he wrote "My Captain."

Extremes meet, and many of Mr. Whitman's admirers are also enamored of the peculiarly hot-house atmosphere of Mr. Rossetti. We may be mistaken, but we see in his new volume a healthier strain than before, both in the sonnets added and in the subtraction of others. In his 'Ballads and Sonnets' (Roberts Bros.) he includes the greater part of the "House of Life," with additions that are almost wholly improvements; no new note of morbidness is struck, and some of the most objectionable things disappear from the pages. The ardor, the passion, the only too searching analysis remain; and the power of expression was never greater. As the German language became French in the hands of Heine, so the English tongue becomes Italian in those of Rossetti; yet there is in his sonnets no sense of deliberate imitation, no foreignness, no mediæval whim. The emotion is in many respects modern, but the utterance brings back Petrarch and Dante and Michael Angelo. In the narrative poems, which fill the greater part of the book, the sense of artistic perfection is less, and there is something in them of the prolixity of Morris, though joined with far more of dramatic and passionate power. The new volume of poems by Christina Rossetti, 'A Pageant, and Other Poems' (Roberts), sustains her reputation, but will scarcely enhance it, unless through the fine and subtle interest of the series of sonnets called "Monna innominata."

Mrs. Augusta Webster, author of 'A Book of Rhyme' (Macmillan), has had many friends and readers in America, and has been an industrious worker in literature. Her translations from the Greek have had high merit, while her 'Dramatic Studies' and 'The Auspicious Day' have shown faithful and thoughtful work. The London *Leader* went so far as to say: "Since Mrs. Barrett Browning no woman has written half so good poetry as Mrs. Webster." To our thinking, she has been far surpassed by Jean Ingelow and Menilla Smedley in England, and by Helen Jackson (H. H.) in this country; and even this full and graceful 'Book of Rhyme' leaves the question still open whether she is really to be pronounced a poet or only a poetical mind.

The poetical mind, at least, is in 'Songs and Lyrics,' by Ellen Mackay Hutchinson (J. R. Osgood & Co.), and the daintiness and originality of style in mechanical execution in the little volume do much to enhance the grace of the really thoughtful and original verses within. They are almost all on the same minor key; their feeling for nature is exquisite, and they have a golden brevity, like seventeenth-century poems. How fine is the touch, for instance, in these brief lines, with which the book opens:

"MOTH SONG.

"What dost thou here,
Thou dusky courtier,
Within the pinky palace of the rose?
Here is no bed for thee,
No honeyed spicery—
But for the golden bee
And the gay wind and me
Its sweetness grows.
Rover, thou dost forget:—
Seek thou the passion-flower,
Bloom of one twilight hour.
Haste, thou art late!
Its hidden savors wait.
For thee is spread
Its soft and purple coverlet;
Moth, art thou sped?
—Dim as a ghost he flies
Through the night-mysteries."

In 'A Home Idyl, and Other Poems,' by John Townsend Trowbridge (Houghton, Mifflin & Co.), we pass, it must be owned, into the domain of the commonplace. No fine mystic fancies, no twilight moths, no haunting cadences for him; but good wholesome "chores" on a New England farm, hardly ever exhibiting such touches of pathos and power as are found in his 'Tragedy Queen.' Mr. Trowbridge's vein is a good deal like Dr. Holland's, and there seems no reason why it should not conduct him to an equal popularity. Mr. Gallagher is another author who should have more fame of this kind than he has won; it is forty years since he was first recognized among "the poets of the West"—Ohio then being called the West—and the poem which gives its title to the volume, 'Miami Woods' (Robert Clarke & Co.), was written in successive parts at intervals of twenty years. These verses are not great or inspired, but they are honest and conscientious, and will one day have an historic interest, as illustrating the first new flavors caught by English literature from the onward march of American civilization.

It might seem a long step from Miami Woods to Ireland, though the corresponding step in this direction has been taken by so many thousands; but we must not fail to call attention to the merit and even charm of the new compilation of 'Poets and Poetry of Ireland,' by Alfred M. Williams (Osgood & Co.). There have before been similar works, edited by Crofton Croker and others, but none so full or satisfactory, with such ample explanation and elucidation, and such especial attention to the earlier poets. There is such grace and power, such wild fancy and passionate ardor in the translations by Sir Samuel Ferguson and others from the Irish bards and hedge-poets, that it really seems doubtful if the early strains of any nation can surpass them. The Scotch love-poetry seems cold, the Scotch war-poetry tame, compared with these more Southern and tropical strains. The modern Irish literature curiously retains something of these same qualities, and seems peculiarly fertile in the various combinations of ballad measure. Macaulay himself has not handled the long-metred narrative strain with a sweep so fine as that of the almost unknown poets who wrote "Fontenoy" and "The Sack of Baltimore," or that of Sir Samuel Ferguson in his "Forging of the Anchor." Nor is this the only style accessible to the modern Irish muse; for it would be hard to condense a nation's grief into more terse and concentrated words than those of Lady Wilde in her stern, sad verses on the Irish exodus:

"'A million a decade!' Calmly and cold
The units are read by our statesmen sage;
Little they think of a nation old,
Fading away from history's page—
Outcast weeds by a desolate sea—
Fallen leaves of humanity.

. . . . . .

"'A million a decade!' What does it mean?
A nation dying of inner decay;
A churchyard silence where life has been—
The base of the pyramid crumbling away;
A drift of men gone over the sea,
A drift of the dead where men should be."

Yet, even in this fine poem, there is something of that incompleteness, that mixture of grand and commonplace, that blending of incongruous images, which seems to grow out of the loose fertility, the unmastered impulsiveness of the Irish nature. Every Celt has a poetic mind; his difficulty is in controlling himself sufficiently to be a poet.

Scotland also furnishes a flavor of its own to our recent American poetry in the volume which includes the works of the late William Wilson (Poughkeepsie: Archibald Wilson), a Poughkeepsie bookseller of Scotch origin. The memoir furnished by Mr. B. J. Lossing is more interesting as a typical picture of a manly life than as a record of genius; and the poems, but for the pleasant associations of the Scotch dialect, would hardly arrest attention. We prefer their homely simplicity, however, to the exotic flavor of 'Orion, and Other Poems,' by Charles G. D. Roberts (Lippincott), where we have echoes of Keats and Swinburne and Horne to an extent not perhaps incompatible with original genius, but at any rate so disguising that gift as to render its presence very questionable.

CHILDREN'S BOOKS.—IV.

A HAUFF revival is by no means a bad feature of the juvenile publications of the current season. There is, to begin with, a new issue of Houghton, Mifflin & Co.'s edition of the 'Märchenalmanach,' which they appropriately entitle 'The Arabian Days' Entertainments'; then comes the fresh translation, by Edward L. Stowell, styled 'Tales of the Caravan, Inn, and Palace' (Chicago: Jansen, McClurg & Co.); and finally, six of the series (less than half), without their setting, are presented in Pinkerton's 'Little Mook, and Other Fairy Tales' (Putnams). All these versions are illustrated, and the last two have partly borrowed from the same source. Mr. Stowell's is to be praised for its fidelity and completeness, and for its good English; Mr. Pinkerton's is rather to be called a paraphrase. On the other hand, the New York edition is somewhat more open and tasteful in its typography. These are the main considerations for purchasers, who will in any well-stocked bookstore find all three volumes side by side for comparison. Nor will it come amiss to examine, if accessible, the 'Selections from Hauff's Stories,' published two years ago by the Rivingtons (London). Designed by its teacher-editors as a first German reading-book for schools, it contains "The Caliph Stork," "The Phantom Crew," "The Amputated Hand," "The Rescue of Fatima," "Little Mudj," and "The False Prince" in the original text, with an exhaustive vocabulary, while the fifth and sixth stories are closely translated in an appendix. There are many families in which such a book will serve a double purpose.

On the whole, we must welcome Fernan Caballero's 'Spanish Fairy Tales' as rendered by Mr. J. H. Ingram (Lippincott). There is a great choice among these stories, which have been eked out with two of De Trueba's. Some are mere fables. Obviously, not all are peculiar to the peninsula: "The Foolish Wolf and the Shrewd Fox" reminds us of 'Uncle Remus' (Brer Rabbit smearing Brer Possum's chops with butter); "Benibaire" recalls a Japanese tale in Prof. Griffis's collection; "The Three Wishes" and several others have their counterparts in Grimm. But much that was old and even rubbishy could be forgiven for the pretty morality of "Fair-Flower." Mr. Ingram's translation is intelligent and cultivated, only occasionally lapsing into colloquialisms, such as "he would like to *see over* the palace." The extraordinary thing about this book is the illustrations, which are fearfully and wonderfully made.

Mr. Frank Stockton easily surpasses in humor all American writers for children. His drollery is as spontaneous and unexpected and original as that in 'Alice's Adventures.' Nothing can be more absurdly clever than the three leading stories in 'The Floating Prince, and Other Fairy Tales.' We must ask pardon of the readers of *St. Nicholas* for assuming that everybody does not know that the Floating Prince is a young gentleman of good family who starts on his travels in search of all the other requisites of a kingdom besides a ruler, and picks up his army and navy and chancellor of the exchequer and aristocracy and common people as he goes along. The school-boy aristocrats desert, and their adventures form a story by itself hardly less laughable than that to which it serves as a sequel. Here the central conceit is of a city which runs down and has to be wound up. "The Reformed Pirate" is another masterpiece.

The rest are of less consequence, but are still comical enough.

Mr. Edward Everett Hale's 'Stories of Adventure, told by Adventurers' (Roberts Bros.) is a continuation of his 'Stories of War' and 'Stories of the Sea,' whose general aim is to show children how to use books in a public library. This attempt is naturally sought to be reconciled (though it is disavowed in the preface) with the production of a book which will interest and edify those who, not being of an inquiring mind, go no further. We regard it as only measurably successful. Say what you please, it is the very exceptional boy or girl who would not be more alarmed than delighted if Marco Polo, or Humboldt, or Lewis and Clarke were plumped down before them by the library attendant; and if one considers the lack of motive for reading, say, Cook's 'Voyages' entire, the inability to understand much of it and of kindred works, the small occasion for "looking up a point" in it, and finally the scanty leisure of a young scholar, it is hard to believe that the learned circle which "Uncle Fritz" directs has been appreciably enlarged among the hundreds or thousands of purchasers of Mr. Hale's series. It is fair to inquire whether the Boston Public Library has any evidence to the contrary. The make-up of this volume, like that of its predecessors, is, from a printer's point of view, slovenly. The extracts and the dialogue should be indicated by different sizes of type, and the origin of the former should be constantly and plainly announced.

The good points of Mr. Butterworth's 'Young Folks' History of Boston' (Estes & Lauriat) are its being brought down to the present time; its abundance of anecdote; its quotations from Boston poets; and, in the main, its illustrations. Its defects are a want of unity and proportion, as well as of accuracy; it is, in the best sense, neither literary nor scholarly. Take as an instance of carelessness and superficiality, to say the least, the following sentence concerning the Rev. Henry Ware, jr. (p. 398): "At this time, in the last years of his life, the great news of the East Indian emancipation came ringing over the sea. England had emancipated 800,000 slaves. The abolitionists held a meeting for congratulation and rejoicing at Faneuil Hall. Ware was the poet of the enthusiastic occasion. . . . It was the last poem of his life." Now, the great news that came "ringing over the sea" was the enactment of *West India* emancipation, in 1833, which did not take effect till August 1, 1834. In neither year did the abolitionists celebrate the event in Faneuil Hall, nor unitedly and with *éclat* anywhere. Mr. Ware died in 1843.

Mr. George Cupples's 'Deserted Ship' (A. Williams & Co.) is the work of an author already distinguished for his contributions to nautical literature. The hero of his present story is a boy, the last survivor of a ship abandoned in the Arctic sea. Beset in the ice, he, alone and unaided, finally extricates a full-rigged bark from the icy dangers with which she is beset. Although this is an absolutely impossible feat, the story is told with such skill as to make one entirely lose sight of its inconsistency.

Mrs. George Cupples, in 'Driven to Sea' (A. Williams & Co.), displays as a writer a power by no means inferior to that of her husband. She tells of a high-spirited lad who, to avoid betraying a comrade, runs away and ships before the mast. There is nothing in her story beyond the range of probability. The sea-terms she has occasion to use are simple, and by no means outside the compass of a woman's experience.

Mr. W. H. G. Kingston's 'Peter Trawl' (A. C. Armstrong & Son) bears a strong family likeness to the tales already told by the same author. We have the same "properties"—wrecks, typhoons, deserted islands, open boats at sea, pirates, the pious young hero who in moments of danger, trouble, or perplexity always turns to prayer, and induces dissolute mates and hardened sailors to do the same. Everything is a subject for prayer, from a badly-set topsail to a shortage in provisions, with the usual perverse series of disasters, all of which might have been avoided by a little prudence and care. We observe that Mr. Kingston introduces the new "property" common to all the nautical stories of this year—a drag formed of three oars to hold a small boat head to the sea in a gale.

Mr. Henry Castlemon's 'George at the Wheel' (Porter & Coates) is by no means a nautical story. It treats of guerillas, etc., and is evidently written to accelerate the demand for revolvers and burglar-proof safes.

The notable success of one or two tales of travel for children has stimulated production in this line, and brought to our table four conspicuous examples. Philadelphia's contribution is 'Our Young Folks Abroad,' by James D. McCabe (Lippincott), which has at least one title to distinction, that the voyagers patriotically choose an American steamer for making the Atlantic trip. The course is via England, France, Belgium, the Rhine, Switzerland, Italy, the Mediterranean ports, and Greece, to Constantinople. We cannot perceive the least aptitude in Mr. McCabe for his task. There is no verisimilitude in his fiction, and his facts, however derived, are in presentation unqualifiedly guide-bookish. The pictures are, though rather antiquated and oddly distributed, mostly good. The author of 'Rip Van Winkle's Travels in Foreign Lands' (New York: T. Y. Crowell & Co.) gets rid of a troublesome charge by leaving his *compagnons de voyage* at home. He is a schoolmaster, and sends back letters to his pupils. As his wanderings cover the whole of Europe, from Moscow to Lisbon, the guide-book quality necessarily predominates in the book, but is overlaid with some skill. Certain judgments of art and of historical characters do not inspire one with a very high opinion of "Rupert Van Wert's" training. Mr. Butterworth's 'Zigzag Journeys in the Orient' (from the Adriatic to the Baltic) is, like all this writer's works, formless and helter-skelter. Think of the nursery tale of "The Three Wishes" being inserted apropos of Kharkov! Mr. T. W. Knox still holds his place at the head of the column in the third and last of his series called 'The Boy Travellers in the Far East (Ceylon and India),' which the Harpers have brought out in a style corresponding with its predecessors. His two young gentlemen and their care-taker have some reality about them, thanks to his possessing a sense of humor noticeably wanting in the authors of the three books just mentioned. What he has seen, too, enables him to appropriate and assimilate thoroughly what he frankly acknowledges having borrowed from other authorities. His illustrations have mostly done duty before, and occasionally in other relations than those indicated by their present labels, but no one can find fault with them for their fewness or for their lack of interest.

The advantage in putting Shakspere into doggerel is not clear, and Mrs. Valentine's 'Shakspearian Tales in Verse' (A. C. Armstrong & Son) is just that, plus a number of crudely colored plates and some decorative illustrations in brown ink. "The Tempest," "The Taming of the Shrew," "The Merchant of Venice," and "The Winter's Tale" are the plays selected. There are obvious reasons why the second and third should not be set before children; there is perhaps no reason why the beautiful and effective climax of "The Winter's Tale" should be left out as it is here. Prof. Robert R. Raymond's 'Shakespeare for the Young Folk' was prompted by a desire to "do the skipping" for them in reading the plays, and also to make the plot and the language more intelligible by interjected comment and narrative. How far this course, which subordinates the dramatist to his editor, and results in a sort of patchwork, will secure the coveted attention of the young, we confess ourselves unable to judge in advance of experiment. The alternation from prose to verse interrupts the continuity, not of the story, but of the impression made by it; and whether it is sufficient compensation for this to leave out obscure and uninteresting and unclean passages, who can say? However, we can testify to the refinement and conscientiousness of the editor's method, and to the pleasing taste with which the book is got up in every respect. No parent need fear to make a trial of it. The three plays undertaken by Mr. Raymond, by the way, are the "Midsummer Night's Dream," "As You Like It," and "Julius Cæsar."

But it is time to come to the end of our list. We spare a word for 'Good Times' (New York: White & Stokes), devised as a "prize painting book," Miss Dora Wheeler furnishing examples which confirm her reputation as a colorist while revealing the defects of her draughtsmanship. The compositions are generally artistic, and the children represented are American and not foreign. The rhymes, by an anonymous hand, do not add much to the pictures. Mr. Howard Pyle's 'Yankee Doodle' (Dodd & Mead) should also not be overlooked. It is the nearest approach to Caldecott yet made on this side the water. Here one feels that the designer's strength lies more in his drawing than in his color, which nevertheless harmonizes well enough with the absurd images evoked by the song. Mr. Pyle's feeling for perspective is excellent, and it is manifest in his outlines, but his coloring lacks atmospheric gradation. His landscape, though interesting and dexterously employed, does not show the mastery of his English predecessor. There remain two handsome books, of universal interest, 'Cassell's Book of Indoor Amusements, Card Games, and Fireside Fun,' and 'Cassell's Book of Sports and Pastimes.' Together they cover the entire field of juvenile recreation, and both have a great abundance of lucid illustrations.

The Honey Ants of the Garden of the Gods, and the Occident Ants of the American Plains. By Henry C. McCook, D.D. Illustrated. 8vo, pp. 188. Philadelphia: J. B. Lippincott & Co. 1882.

If capitalists, overcoming the difficulty in "disgorging," were to furnish subsistence to any needy one who might apply, they would serve a purpose somewhat similar to that of certain individuals in a community of "honey ants." The honey-bearer, however, carries the supplies within its body. From being a well-proportioned ant, by filling itself, or being filled by others, or both, it becomes an ill-shaped creature with an abdomen like a large currant. Active enough before this, afterward it is simply an animated bottle of honey, and hangs by its feet from the ceiling of one of the underground chambers, surrounded by others, resembling one of a bunch of small Delaware grapes. When called for, a drop of the nectar is squeezed from the mouth to be lapped up by the worker for his own needs or to feed the young or the queen. The food is stored in the crop, an enlargement of the œsophagus, and kept from entering the stomach by a "gizzard." The only source of supply of which mention is made is found in the galls on a species of oak, from which it is gathered in the night. The honey is said to be good; it is eaten or made into drinks by the Indians and Mexicans. An average community contains nearly 600 bottles, about

half a pound. The small yield and the difficulty in farming preclude any hope of a commercial value. The dwellings resemble those of the harvesting and other subterranean ants. They are found from Colorado to Mexico, and from Texas to California. All that is known of these insects is contained in the first half of the book before us. The second half is devoted to the Occident harvester, which is closely allied to that of Texas.

The present work is intended to be a companion volume to 'The Agricultural Ants of Texas,' noticed recently in these columns. It contains the results of researches in a field so little explored that most of the facts enumerated are new to science. As a scientist the author occupies the soundest position possible. He does not cripple himself at the outset by the adoption of theories; he has none to support, none to refute. His independence in these respects is much in his favor. Looking for his personal equation, one is gratified to find so little bias. There are traces of the clergyman here and there, but not enough to impair the work. As might have been expected, considerable fondness is shown for the study of mentalism, etc., and for comparisons between the ants and men. Several pages are devoted to "Acts of Beneficence." "I am much inclined to the view that anything like individual benevolence, as distinguished from tribal or communal benevolence, does not exist. The apparent special cases of beneficence, outside the instinctive actions which lie within the line of formicary routine, are so rare and so doubtful as to their cause that, however loth, I must decide against anything like a personal benevolent character on the part of my honey-ants" (p. 45). To many the data cited in support would not seem to warrant a nearer approach to a definite conclusion than that of the plantation philosopher, "some people are not all alike." The discussion is cautiously closed with: "However, the question can by no means be regarded as settled." On page 133 the strength of ants is compared with that of men, to the disadvantage of the latter. "If we estimate the average man at five and a half feet in length and 150 pounds in weight, our baggage porter would needs carry a half-ton weight up one-third of a mile of stairway to meet on equal footing the emmet athletes of the Occident ant-hills!" A closer approximation to an exact comparison might have been made if the problem had been stated thus: If an ant, length so much, weight so much, with six legs, can carry so much such a distance, what would be the proportionate load and distance for a man, length so much, weight so much, with only two legs? Such comparisons may be entertaining, but it is doubtful whether they add anything to science.

The author is the happy possessor of a clear, forcible, and attractive style. Whether treating of excavations, mound building, gathering food, gate closing, toilet work, warfare, care of young and queen, parasites, or even the details of anatomy, the interest never flags. By the side of Mr. McCook's contributions, what was previously known of these species amounts to almost nothing. The earlier literature on the subject is carefully handled, and various mistakes are corrected. A number of previous misapprehensions are disposed of by the discoveries relating to crop and gizzard. What appears to be an organ of stridulation is described on page 66. The monographs are completed by bibliography, synonymy, and good descriptions and figures of the species. Those who deprecate the coinage of childish and silly vernaculars will note with pleasure that the author uses the specific as the "common" name. "Occident Ant" is a most appropriate name for the species occidentalis. Our own observations of this ant have led us to believe the pebbles for the mounds were gathered from all directions as well as from within. When a mound was scattered the pebbles were brought back. In cases where there had been no disturbance workers were occasionally seen bringing materials for the mound from considerable distances. The author says, page 132: "These pebbles are, of course, excavations from the underground rooms and galleries." On page 136 he says, among other duties, that "some go down to the clearing and bring up pebbles to repair a break in the cone." In his earlier work ('Agricultural Ants of Texas,' p. 162) we note the following: "An ant was seen carrying a large piece of quartz gravel, which must have weighed three or four grains, up the steep slope of a ditch or cutting in Austin to its gravel-covered mound at the top. I could not divine the object of the carrier in this unusual and apparently senseless act." Taken sixty feet away, this pebble was again seized by another worker and carried homeward. The depressions on the clearing around the mound would seem, in part at least, to be due to the action of the winds.

Everything considered, the value of the book is such that its failings appear to sink into insignificance. Scientifically of the highest character, at the same time it is very attractive to the general reader. It is an excellent history of model scientific investigations, in the production of which all who have been in any way concerned may justly take pride.

History of Sculpture, Painting, and Architecture. Topical Lessons, with Specific References to Valuable Books. By Charles S. Farrar, A. M., President of Milwaukee College. [Second edition.] Chicago: Townsend MacCoun. 1881. 8vo, pp. 142.

To draw up topical reference-lists is a common ambition among students, but one whose successful accomplishment involves so much skill and patience that very few have the temerity to publish their results. In the work before us, however, President Farrar attempts a complete conspectus of the history of three great arts, with a view to facilitating elementary study. In each division of the work, the references are grouped under generic and specific captions arranged in chronological order; as, for example, section vii. of part ii., headed "Leonardo da Vinci," and comprising "(1) outlines of his life; his genius and gifts and their comparative unfruitfulness; (2) life and works at Milan; history and analysis of his 'Last Supper'; (3) a full and critical history of the treatment of the subject of the Last Supper in painting, especially by Giotto, Angelico, Signorelli, Ghirlandajo, Raphael, Andrea del Sarto, and Titian," etc., with numerous references to book, volume, and page under each topic. The author's idea of obliging his students to draw their own conclusions from a comparison of authorities is excellent, and within the limits set and for the purpose in view the execution of the plan is in many points commendable. The selection and combination of subjects are often quite apt, showing the author to be more than a mere theoretic systemizer; and the verbal expression is generally skilful and neat, though occasionally tending to too abbreviated and dogmatic characterization of individuals and epochs. But every reader will quarrel with the narrow range of authorities and with the unpardonable blunders (particularly in a second and revised edition) in minor details. The author confines himself entirely to works in English, and is thus constrained to use much second-rate material. His list of authorities contains most of the standard English works, but with some surprising exceptions; yet many excellent and easy foreign works might most advantageously have been added. Besides, there are no references to reviews and magazines, none to biographical dictionaries, none to travellers' guide-books, which often afford interesting side-lights upon works of art, and but few to the larger illustrated books—Lepsius's 'Denkmäler,' Penrose's 'Principles of Athenian Architecture,' for instance, in the architectural division—which are to be found in city libraries. Considering the aim of the work, we miss also such treatises as Burckhardt's 'Cicerone for Italy,' Crowe and Cavalcaselle's 'Painting in Italy,' Stirling's 'Annals' and 'Velasquez,' Calvert's 'Rubens,' Viollet-le-Duc's 'Discourses,' and many others. The author's main stay appears to be Lübke.

The typography of the book is clear, but full of annoying mistakes; some of the latter pages showing that the printer was much "out of sorts" on numerals and capitals. Among misspellings or blunders we note *Nicola* Pisano, *zographic*, *Sanzio*, *von* Ostade, *Durer*, *Il* Spagnoletto, *Esteben*, *Erectheus*, *Micchele*, and a long list of errors in dates, the worst of which are, under Lo Spagnoletto's name, 1585-1609 for 1588-1656 (p. 86), and, under Canova, 1601-1667 for 1757-1822 (p. 31). We have not tested the accuracy of the paginal references; we trust, for the reader's sake, that the high percentage of errors observable in the dates does not obtain there also. The architectural division, which is a new feature in this edition, is not so well done as the other two, principally, perhaps, because elementary text-books on the history of architecture are still a desideratum in English. Indeed, the treatment of some topics perhaps warrants the unpleasant suspicion that the author not only does not refer his pupils to foreign authorities, but is unfamiliar with them himself.

Country By-ways. By Sarah Orne Jewett. Boston: Houghton, Mifflin & Co.

To have known these sketches already in the pages of the *Atlantic* seems to make them only the more welcome for their delicate discrimination, their gentle appreciation of the old New England character. Miss Jewett not only makes us intimate with the roads and lanes, the wide woods and the old farms beyond the Piscataqua, but the sketches read like a loving memorial of a generation that is just passing out of our sight. Such a memorial is needed, for it is so easy to outline in the rough the stern and homely traits of New England life that too many will never know its tenderness and its beauty. That reflex wave from beyond the Hudson River whence comes, as Miss Jewett shows, the typical "American," will soon sweep away the old traditions and the old characteristics. The style of the book befits the subject. Perfectly plain and without pretension, it still never falls from *simplicité* into *simplesse*. If we are sometimes conscious, as in 'River Driftwood,' that the description is something long, for all that we are won to read on with the same restful feeling with which one listens to a strain of sweet music repeating itself again and again.

Pictures and Legends from Normandy and Brittany. By Katherine and Thomas Macquoid. New York: G. P. Putnam's Sons.

THE Macquoids could not but make an interesting book from their gleanings in lands so rich in associations as Normandy and Brittany. It is a motley group that is gathered in their pages. The Korrigan and the Fourolle, the fairy and the witch of the village legends, seem to join hands with the Lady of La Garaye and Mad. de Sévigné, "Notre Dame des Rochers"; while Saint Christopher, Duke Richard the Fearless, and the Conqueror stand shoulder to shoulder with the village curé and the burly

peasant. The authors have told the stories as they were told them, but it is to be regretted that so many of them are of the dark and tragic sort. There is a tricksy, frolicsome side to fairy lore that is more winning. The best in the book (and it need not be said that the Macquoids are good story-tellers) is "The Pilgrimage to the Mount," a story of the loving, breaking heart of a mother who gives up her son to be a priest. Perhaps it could not be helped that the picture to illustrate it, "La Merveille," the great abbey on the top of Mont St. Michel, should be so inadequate. It will repay the trouble to look up a not uncommon book, Nesfield's 'Specimens of Mediæval Architecture.' The drawings of Mont St. Michel, one of them of this very same view, have a grandeur of effect which even photographs fail to give.

The Sinai and Comparative New Testament. The Authorized English Version; with introduction, and various readings from the three most celebrated manuscripts of the original Greek text, by Constantine Tischendorf; with the various readings so inserted in the text that the whole Scripture, according to either the Sinai, Vatican, Alexandrian, or the received Greek, can be read by itself, while the variations are all compared with facility. By Edwin Leigh. New York: Ivison, Blakeman, Taylor & Co. 1881.

THE peculiar feature of Mr. Leigh's excellent little book consists in its presenting four texts without requiring that more than one be read in order to see all the four. This feat is performed by the simple device of using different types for the several manuscripts when they differ, and employing ordinary type when they all agree, together with a lucid employment of brackets. *E.g.*, words occurring in the Sinaitic MS. (the oldest) but not in the "received text" are printed in full-face type; words occurring in the Vatican (the second oldest) or Alexandrian MSS., but not in the Sinaitic or "received" texts, are printed in German text; words occurring in the "received" text but not in the Sinaitic are in Italics. The author's manipulation of this intricate matter is absolutely without inaccuracy, barring his neglect to announce by the appropriate brackets at the beginning of Matthew that the Alexandrian Codex fails to contain the first twenty-four chapters of this Gospel. This omission is only mentioned in the introduction, and consequently a person unacquainted with this fact about the Codex in question, and endeavoring to decipher its text from Mr. Leigh's book, would become hopelessly confused from the lack of brackets. But, with this exception, the work does perfectly what it undertakes—viz., to furnish the easiest and most compact means by which an Englishman ignorant of Greek may either compare or read singly the three most valuable manuscripts of the Greek New Testament.

BOOKS OF THE WEEK.

Adeler, Max. The Fortunate Island, and Other Stories. Boston: Lee & Shepard. $1.
Alden, W. L. Christopher Columbus. New York: Henry Holt & Co. $1 25.
Anecdota Oxoniensia: Texts, Documents, and Extracts from the Bodleian and other Oxford Libraries. Aryan Series, Vol. 1., Part 1. Oxford: Clarendon Press.
Arthur, Chester. Illustrated by Sowerby. London: Marcus Ward & Co.
Austin, A. Savonarola: a Tragedy. London: Macmillan & Co. $2 25.
Balch, W. S. A Peculiar People. Chicago: Henry A. Sumner & Co. $1 25.
Barth, A. The Religions of India. Boston: Houghton, Mifflin & Co. $5.
Bates, Charlotte F. Seven Voices of Sympathy from the Writings of H. W. Longfellow. Boston: Houghton, Mifflin & Co. $1 25.

NEW YORK, THURSDAY, DECEMBER 22, 1881.

The Week.

MR. BLAINE'S instructions to Mr. Lowell on the subject of the Clayton-Bulwer treaty contain plenty of internal evidences that the whole subject of our policy on the isthmus has received a new consideration at the hands of the President. Mr. Blaine's first despatch on the subject, in which he spoke of the scheme of a sole protectorate as being part of the traditional policy of the United States, has been followed by exactly the consequences which we predicted in these columns some weeks ago. We then pointed out that it was impossible to discuss the canal question at all without first recognizing the obstacle presented to the sole-protectorate policy by the Clayton-Bulwer treaty; and that all England would have to do by way of reply to the despatch would be to ask what we had to say about that agreement. This is exactly what has happened. Lord Granville has replied by this very inquiry, and it seems that his despatch has probably crossed that of Mr. Blaine's, published on Friday. Mr. Blaine's despatch is therefore very important, for it is the first authoritative statement of the position of the new Administration with regard to the canal. The voice, however, is still the voice of Mr. Blaine, though the hand is that of a man who, we hope, appreciates much better than Mr. Blaine seems to do the delicacy of the questions involved. The chief changes proposed in the Clayton-Bulwer treaty are as follows: That every part of the treaty which forbids the United States fortifying the canal and holding political control of it, in conjunction with the country through which it runs, be cancelled; that every part of it which prohibits Great Britain or the United States from making acquisiton of territory in Central America, shall remain in full force; that the clause looking to the establishment of a free port at each end of the canal be retained if England wishes it to be retained; that the clause providing for a joint protectorate of whatever railway or canal may be constructed at Tehuantepec or Panama shall be considered obsolete "by the non-action and common consent of the two Governments."

The object contemplated is from the American point of view certainly a correct one. No great power situated like the United States would permit the control of so important a channel of communication between different parts of its territory, as the Isthmus Canal will necessarily be, to fall into any hands but its own. While it is true that we have an open land communication between the Atlantic and the Pacific coast, it is also true that it would be of the greatest importance to the United States in case of war to have the shortest way by sea at its disposal for the concentration and use of its naval force on either side of the continent. It is also unquestionable that the United States are the great pacific and neutral power of the future, and far less liable to get into warlike complications than any other, and that therefore this republic will be the fittest protector of the neutrality of the interoceanic canal as a highway of commerce to be open to all the world for peaceful purposes. It was therefore to be expected that a revision of those features of the Clayton-Bulwer treaty which give Great Britain an equal if not a superior share of power over the Isthmus Canal would at some time be asked for by the United States, and it was to be hoped that it would be done under auspicious circumstances, and in a manner facilitating a friendly discussion and an amicable settlement of the question. It is for these reasons all the more to be regretted that Mr. Blaine should have presented the American side of the case in a despatch which, in point of tone, is more like a stump-speech than a diplomatic document, and is calculated to produce upon every sober-minded reader the impression that it is intended more for home consumption than to propitiate the British Government in favor of conceding an important modification of a treaty with this republic. That Mr. Blaine himself was aware of this, appears from his remark at the close of his despatch, in which he instructs Mr. Lowell to be careful about showing it to Lord Granville, for the reason that his, Mr. Blaine's, course of reasoning, "while legitimate and pertinent in an instruction to our own Minister," might seem "discourteous if addressed directly to the British Government." While writing this sentence Mr. Blaine must have been very well aware that his despatch would be published, as it doubtless was intended to be, and that it then would be looked upon as "directly addressed to the British Government." Mr. Blaine ought to have felt, if he did not, that he was thus at the start gravely embarrassing a negctiation which is, in its very nature, unusually delicate and should be managed with the greatest tact. He has succeeded in making the country see good reason for congratulating itself that the work his ambitious brilliancy has accumulated for his successor will be disposed of by men of less dash and more good sense.

The comments of the English press on the last Blaine despatch to Mr. Lowell about the canal show plainly enough that it has had the unfortunate effect of causing irritation at the very opening of a discussion which is intended and expected on our side to result in an amicable arrangement. But when the London *Observer* denies the justice of Mr. Blaine's Suez Canal illustration it falls into confusion which is widely diffused on this side of the water too. The fortification of the canal is constantly spoken of here as if it secured its use as a highway to the party fortifying and holding it. This enables the *Observer* to deny that England exerts any such control over the Suez Canal as the United States claim over the Panama Canal. But the fact is that the fortication of a canal only enables the holder to prevent any one else's using it. It does not necessarily secure its use to him, because it is only useful as a passage from one sea to another. This sort of control of it can be exerted just as effectively by having a powerful fleet at both ends as by holding the territory along the banks. England does the former as regards the Suez Canal; the United States wish to do the latter as regards the Panama Canal. To control a canal completely, and make it serve all purposes, a fleet at both ends, combined with the possession of the banks, would be necessary.

The financial debate of the present session of Congress was opened on Friday by Senator Voorhees, who said, among other things, that the panic of 1873 was largely due to the demonetization of silver; that a return of prosperity was secured by the restoration of the cheap paternal coin; that Secretary Folger, in proposing the retirement of the silver certificates, committed "a wanton and criminal assault upon the financial stability" of the country; that the "tenderest mercies" of the national banks are "legalized cruelty and multiplied usuries"; that "the average national bankers" are painfully destitute of "knowledge, unselfishness, and breadth of views"; that the "moneyed corporations" stubbornly refuse to "learn wisdom and forbear their greedy and repulsive demands"; that "the downfall of the United States Bank a half century ago" ought to be a warning to them; and that "the greenback cause" has "achieved a great and important victory." This lively introduction prepares us for an interesting discussion when our new-school economists and statesmen fairly warm to their work.

Mr. Manning's bill to reorganize the Supreme Court provides for its division into three branches, which are respectively to have charge of (1) equity suits, (2) common-law causes, and (3) admiralty and revenue cases and cases in which the United States is a party. Whenever a case comes up involving a construction of the Constitution or a treaty, or is brought on a writ of error from the court of last resort in any State, it is to be considered by the full bench. Each division will consist of three judges; and if two judges in any division concur in a judgment, the decision is final unless some member of the court desires it to be reviewed by the full bench. This right would, of course, be rarely exercised; now and then a dissenting judge in one of the divisions would demand it, but only in case there was a grave difference of view between himself and his associates —that is, in just the cases where a review would be desirable. The great merits of the scheme are that it does not call for any increase of the number of judges or any new courts, and that it does not raise the pecuniary limit of appeals.

Most of the plans for the relief of the Supreme Court at Washington involve the creation of an intermediate Court of Appeal, and

the increase of the pecuniary limit which entitles litigants to carry their cases to the court of last resort. The scheme for an increase of the number of judges and the division of the court according to the class of cases which come before it has some advantages over these, as it does not tend in any way to make the court a tribunal for rich suitors, which is a very serious objection to the other plans. According to this plan the judgment of each division would be the judgment of the whole court, but internal-revenue cases, for instance, would be decided by the revenue division, bankruptcy cases by the bankruptcy division, patent cases by the patent division, and so on. The difficulty would be to prevent any conflict as to principles of law between the different divisions. Whatever scheme is adopted, nothing ought to be done to increase the pecuniary limit.

Mr. Sherman's Funding Bill will, if passed, settle the long-pending controversy over the question whether the United States can borrow money at three per cent. on a short bond. The prevailing opinion in financial circles has hitherto been that it could only do so on a long bond. The Secretary of the Treasury in his last report expressed the opinion, "founded on information received from men engaged in financial operations," that it would be essential to the success of a bond bearing less than three and one-half per cent. interest that it should be irredeemable for a long term—none said less than ten years, but most said twenty. The new three and a half per cents with which Secretary Windom refunded the sixes and fives are, however, redeemable at the pleasure of the Government, which Mr. Folger considers a valuable privilege, not to be lightly surrendered by a Government which has and is likely to have a heavy surplus every year. Mr. Sherman proposes to surrender it to a limited extent; that is, he proposes to take up the $200,000,000 three and a half per cents, redeemable at pleasure, with a three per cent. bond redeemable in five years, or after the 1st of January, 1887. There is no doubt that the alacrity with which the holders of the fives and sixes consented to exchange them for the three-and-a-halfs, although they knew the Treasury was not in a position to compel them to do so, furnishes strong reason, which did not exist when this subject was under discussion last year, for believing that even a three per cent. bond for a moderate amount would be floated with almost as much ease, even though nothing but five years' certainty of non-redemption were offered.

There seems in the present state of the money market hardly anything which a Government which keeps faith with its creditors and has a surplus cannot do. In other words, the money market has not been at any time since steam came into use in commerce so unfavorable to persons in search of safe investments as at this moment. In England, investors had hardly recovered from the enormous losses caused by the lavish loans made to semi-barbarous foreign States, and to American bankrupt railroads, when the land which has for two centuries been to the cautious English investor the sole rival of consols, ceased to be safe, owing to the immense fall both in rents and in the value of the fee, caused by bad harvests and American competition. Whether it will in our time ever recover its old position as a security is more than doubtful. It will certainly not do so for many years, even if American competition should become less serious, because it is quite plain that legislation of a somewhat revolutionary character touching land tenures is now one of the strong probabilities of English politics in the near future. On the Continent, there is nothing very attractive in the shape of Government securities except the French rentes, which can only be got out of French hands at prices which yield little if anything more than consols in the way of income, so that there is really nothing for this class of English investors to turn to but United States bonds. These, too, are beginning to attract the attention of English banks as a good receptacle for their surplus funds, because they would not be affected in the same degree as consols by a disturbance in the London money market at the very moment when they would need to be converted into cash. But the most serious difficulty of all for the investor is the fact that facility of communication enables lenders to go over the whole earth in search of "good things." Local investors have no longer the snug little nooks, safe from observation and competition, which they used to enjoy in old times. It is only the hard-pressed farmer who is any longer dependent on the local money-lender. Borrowing states and corporations, and even individuals with good security to offer, find funds pressed on their acceptance from every corner of the globe in which there is accumulated capital. All this is much the same as saying that the money-lender never had to pay so dearly for a quiet mind.

The United States Treasury early in the week succeeded in obtaining for prepayment $5,489,500 of the 3½ per cent. bonds originally called for redemption January 29. The money for these bonds came out of the Treasury during the first half of the week, but not in time to make much show in the statement of the average condition of the banks for the six days ending Saturday. It sufficed, however, to relieve the loan market, and during the week borrowers had little difficulty in supplying their wants at or under 6 per cent. The Stock Exchange demand for money was reduced by a general liquidation of speculative accounts, and an attendant decline of 1@8 per cent. in the market prices of stocks. Foreign exchange was firm, but at rates which admit neither of the export nor the import of gold. A good many railroad stocks have been returned from Europe during the week, which has strengthened foreign exchange rates, as has also the fact that our merchandise exports continue to diminish. In the fifty weeks of the expired part of the calendar year the merchandise exports from New York were $33,900,328 less than during the preceding year. Since last August the gold imports have amounted to $25,382,861; in the corresponding period of 1880 they amounted to $64,035,741. The general trade of the country continues good, and it is doubtful if the profits of general business have ever been as large as during the year so near its close.

The selection of Judge Gray for the Supreme Court bench is an event of considerable importance. It is unnecessary to say anything about his conspicuous fitness for the position; but the most gratifying thing about the appointment is that it seems to show that the President has determined to make fitness the sole test in appointments of this description. Judge Gray has no political backing, there have been no "workers" urging his claims and sounding his praises, and his selection can be attributed only to the desire of the President to find the best lawyer in the country who was willing to take the office. The Massachusetts bar has produced many excellent judges, the fixity of tenure guaranteed by the laws of the State making a strictly judicial career possible there as it is hardly anywhere else in the country. From the day of his appointment to the Massachusetts bench Judge Gray has refused to have any connection with political movements or with politicians of any kind, consistently acting on a view of the judicial office which has been supposed to be a dangerous view for an ambitious man to adopt, because of its unpopularity. The rapid promotion of Judge Gray amounts to a very satisfactory proof that this impression is not altogether sound.

The appointment of Mr. Benjamin H. Brewster as Attorney-General was not unexpected, and now, having been made, it meets with general commendation. Mr. Brewster is a lawyer of high standing, and, although not an active politician in the ordinary sense, has always taken a deep interest in public affairs. He was employed by Mr. MacVeagh as Government counsel in the Star-route cases, and it is to be expected that he will prosecute them with vigor. Some of our contemporaries comment upon the fact that thus far all the new members of the Cabinet have been taken from the Stalwart wing of the Republican party, and that the gentlemen spoken of in connection with the places still to be filled belong to the same class. This is true, and it is also probable that too demonstrative an identification with that Republican faction which was not in accord with the lamented predecessor's "noble aspirations," so prominently mentioned in President Arthur's inaugural address, may in the course of time involve the President in unpleasant embarrassments and dissensions. It must be said, however, that as yet his Cabinet appointments have been individually very respectable. The gentlemen selected have been something more than mere Stalwart politicians.

Mr. T. O. Howe's nomination for the Postmaster-Generalship has a sorry look when one remembers that he succeeds Mr. James, and that the condition of the department, as the Star-route exposures have shown, is such as to call for great business experience, great perspicacity, and great vigor and courage in its chief. It is neither unfair nor unkind to Mr. Howe to say that in all these things he is wanting, and seri-

ously wanting. He is no longer young; in fact, at sixty-five he may be fairly called old. He has never held any administrative office. His temper is so mild, tolerant, and unsuspicious that, though personally a pure and upright man, he has seen so little that is objectionable in the "Grant crowd" that he has, ever since it came into existence, been one of its members. In fact, he was a "third-termer" as long as there was any chance of a third term; and whatever excellences a third-termer may have, a disposition to pursue fraud vigorously, and keep a vigilant watch for its prevention, is not one of the things for which the American public, as at present advised, looks to him. Mr. Howe was so enthusiastic a third-termer that he wrote an article in the *North American Review* on the third term, in which he cited the Second Person of the Trinity in support of it, and declared that "the world would make a mistake if it should turn from Jesus of Nazareth to follow Mr. Springer of Illinois." The only parallel in literature for this is the late Bishop Haven's comparison of the Grant Administration to the Transfiguration on the Mount. Mr. Howe's career as a legislator—he sat eighteen years in the Senate—has been entirely respectable, and he did good service in his own State during the past winter in helping to defeat Boss Keyes's attempt to get the Senatorship. He has the peculiar power, which it would be difficult if not impossible to define or account for, which Mr. George S. Boutwell also possesses, of impressing himself on every Administration as a person who must be "provided for," which to a politician of moderate ability is more precious than rubies or fine gold.

The appointment of Mr. Bancroft Davis as First Assistant Secretary of State is undoubtedly the best that could have been made. There is probably no man in this country more conversant with the business machinery of our diplomatic and consular service in all its branches, as well as with the history and traditions of our foreign intercourse. He possesses at the same time great working capacity, and knows how to give his work a useful direction. In all these respects he is just the kind of man a Secretary of State should have at his elbow to furnish him with information, and to guard him from those mistakes which inexperienced zeal is apt to fall into. The only complaint that ever was made of Mr. Davis when he held the same place under Mr. Fish was, that he lacked that smooth pleasantness and unruffled affability which will make a man in such a position a favorite with the diplomatic corps as well as with his subordinates. But his other qualities are so valuable that they far outweigh this little defect of temper or manner, if defect it be.

Mr. Scoville, Guiteau's counsel, has been delivering a lecture on the case in Washington, for the purpose, it is said, of providing himself with a little money. He excused himself for discussing the proceedings in court on the ground that the press and the pulpit had been doing the same thing, and, somewhat inconsistently, he chastised them both therefor. It is very unusual to find fault with a person for setting you a bad example, which you are following for a pecuniary consideration. He then read a very fine prayer for Guiteau composed by a person named Ringland, of Illinois; discoursed on the law of insanity; overruled Judge Davis of New York on this subject, and indicated the view which Judge Cox ought to take of it; predicted his client's assassination; gave some account of the Guiteau family tree, and produced some medical testimony as to Guiteau's lunacy. We do not know what the price of admission was, but an entertainment so varied would be cheap at five dollars. Of the scandalous and ridiculous impropriety of it we do not need to speak; but of its inconvenience as a precedent something must be said. It is obvious that if it is right for Mr. Scoville, who is an officer of the court, to make money in this way, it is right for the District Attorney and all the prosecuting counsel and for Judge Cox himself. Judge Cox, we believe, is not a rich man, and he is even more respected than Mr. Scoville, and as a lecturer would draw better. If, in fact, those who take part in the conduct of the case are entitled to make all they can out of it during its progress, the position of the jurors, in being kept in close custody, is a very hard one. There is no juror of the twelve who could not fill a good-sized room, at a dollar a head, by lecturing on the other eleven.

A Paris correspondent of the *Evening Post* gives an interesting account of the attempt of the French Republicans in the Lower Chamber to fuse the various "groups" of the majority into a homogeneous whole by means of the American caucus—that is, extra-parliamentary meetings of members of the same party. But he is mistaken in supposing that these are, like the nominating caucuses, a novelty in European politics. Meetings of the members of Parliament of the same party out of doors to discuss lines of action and hear statements from the party leader have been customary in England for two centuries. In fact, they are an almost necessary adjunct of party government. No body of men can be kept together without more or less deliberation in common, and this deliberation cannot take place in the presence of their enemies in the legislature itself. But these parliamentary caucuses are much less necessary in England than in this country. In England members are almost always elected to support a particular man, on whom and on the colleagues chosen by him falls the responsibility either of carrying on the Government or criticising the ministry; and private members of his own party are expected to follow his lead, and, if they belong to the party in power, are always exposed to the heavy penalty of dissolution in case of revolt. Here there is no legislative leader, recognized as such, and no one, therefore, who can impose a line of action on his party with acknowledged authority.

Probably nothing will hamper Gambetta, or any other French Premier, more in keeping together a well-disciplined majority than his inability to dissolve the Chamber at pleasure. Under the French Constitution the President must have the consent of the Senate to do this, so that unless the Minister holds both houses he cannot inflict on deserters or mutineers that final punishment which has so powerful an influence in maintaining ministerial majorities in England. If Gladstone could not dissolve without the consent of the House of Lords, he would be somewhat in the position toward his followers in which Gambetta finds himself today. As matters stand, if Gladstone feels sure that his hold on the constituencies is not weakened, he can at any time, by a fresh appeal to the country, put the recalcitrant members of his own party to the great expense and great risk of seeking a reëlection. But after all, nothing either in France or any other country takes the place of political habits, as an aid to party government. No machinery that can be devised will enable a party to dispense with readiness on the part of individual members to sink minor differences, and shut their eyes to the minor defects of their own leaders, in order to strengthen the organization as a whole. These political habits have grown up in England and America through the experience of many generations of the force which lies in union. This experience Continental politicians still have to acquire. In other words, they have to learn to be happy with half what they ask for and would like to get. That the lesson has not yet been learned in France is shown by the news that sixty-eight members of the Left refuse to go into the caucus, and have formed a group of their own, which will probably constantly threaten the Ministry, and seek to make bargains with it.

It was well for the Ferry Ministry that they had gone out of office before the trial of the Roustan suit against Rochefort. The Reds have always maintained that the Tunisian war was a stockjobbing enterprise, got up by Roustan, the Consul-General at Tunis, in connection with members of the Ministry at home. There were various circumstances connected with it which gave color to the charge that the ostensible cause of the expedition was not the true one. This cause was the turbulence and aggressiveness of the Kroumirs on the Algerian frontier; but when the troops marched against them they could nowhere be found, and then Tunis itself suddenly became the objective point. The Bey was deprived of his power, and most of it lodged in the hands of M. Roustan, who had been bullying him for a good while, had quarrelled with nearly all his diplomatic colleagues, and made no secret of the fact that France needed more commercial elbow-room in that part of the world. Unfortunately, too, about this time M. Léon Say went out to look after what we call here "valuable interests" in Tunis, and M. de Billing, the Assistant Foreign Secretary, went out too; and though M. Say solemnly denied that he had any public mission whatever, or any business created by the war, the Opposition doubted, and when M. de Billing said that he had no private business the Opposition doubted again. Roustan, as it now appears, foolishly sued Rochefort for libel, and has been beaten by the breakdown of M. de Billing, whose chief, M. Barthélemy-St.-Hilaire, repudiated him in the court-room, and Rochefort has got off.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

In reply to a resolution of the Senate, Mr. Blaine submitted on Thursday last his letter of instructions to Minister Lowell in regard to the modification of the Clayton-Bulwer treaty. The letter is dated November 19, and its substance is as follows: The treaty was made thirty years ago under exceptional and extraordinary conditions, which have ceased to exist. Since then, owing to the development of the Pacific Coast, the interests of the United States in the matter of a canal across the Isthmus of Panama have increased incommensurably as compared with those of Great Britain, and considerable modifications in the above-mentioned treaty are therefore demanded. Mr. Blaine is willing to allow the clause restraining the United States and Great Britain from making acquisitions of territory in Central America, and also that providing for free ports at the mouths of the canal, to remain in all their original force; but he insists that the joint-protectorate provision be regarded as obsolete, and the United States left free to make its own arrangements with any country across which the canal may be cut. In closing, Mr. Blaine states that it is the fixed purpose to treat the canal solely as an American question, to be dealt with and decided by the United States Government.

On Sunday a correspondence which passed between Mr. Blaine and Mr. Hurlbut, Minister to Peru, was furnished for publication, with the approval of the President. The correspondence is relative to certain claims now in the hands of an organization known as the "Peruvian Company," against the Peruvian Government. These claims, known respectively as the Cochet and the Landreau claims, aggregate $1,025,000,000. Cochet and Landreau were two men, alleged to have been American citizens, who did certain work under contract for the Peruvian Government in connection with the guano beds. In the first despatch of the above-mentioned correspondence Mr. Blaine virtually recognizes the validity of the Landreau claim, but repudiates the other. In reply Mr. Hurlbut states that "in the Landreau case the proofs are sufficient, and the condition in which the Peruvian Government left the complainant forms a just ground for a decided appeal to their sense of justice." In regard to the Cochet claim, which is for $900,000,000, Mr. Hurlbut very truly says that if the United States assume charge of it, "we should own Peru by a mortgage which can never be paid." In a later despatch, dated November, however, Mr. Blaine denies all "right and standing" in the United States to the "Peruvian Company," which, as we have said, is the organization that has charge of both claims. It will be seen that there is an apparent contradiction between the August and November despatches. In the one the soundness of the Landreau claim is acknowledged, while in the other the company which has charge of, and is pushing it, is disavowed. This correspondence is worthy of note for the reason that it has been asserted in various quarters that Mr. Hurlbut's extraordinary diplomatic course while in Peru was due in some way to these claims.

On Thursday the President sent in the nomination of Mr. J. C. Bancroft Davis to be Assistant Secretary of State.

On Friday the nomination of Mr. Benjamin Harris Brewster, of Pennsylvania, to be Attorney-General, was sent to the Senate. The nomination was referred to the Judiciary Committee and confirmed. It is not expected that the nominations to the War, Navy, and Interior Departments will be sent in until after the holiday recess.

On Monday the President sent several important nominations to the Senate. Chief-Justice Horace Gray, of the Massachusetts Supreme Court, was nominated for Associate Justice of the Supreme Court of the United States vice Justice Clifford. William Henry Trescott, of South Carolina, was nominated as Special Envoy Extraordinary and Minister Plenipotentiary to Chili, Peru, and Bolivia, and Thomas C. Acton to be Assistant Treasurer in New York city. The nominations were referred to the appropriate committees and confirmed. That of Judge Gray has been received with almost unanimous approval throughout the country.

On Tuesday the President nominated ex-Senator Howe, of Wisconsin, for Postmaster-General. The nomination was sent to the Senate late in the afternoon and was confirmed before it adjourned.

More bills have been introduced into the Senate during the week. On Wednesday there was a debate on a resolution for the appointment of a select committee to consider all matters relating to woman suffrage. This was followed by a speech by Senator Beck upon his bill concerning Presidential inability. The debate on this bill was continued on Thursday. The Finance Committee reported favorably on Mr. Sherman's bill providing for the issue of 3 per cent. bonds. The committee made certain amendments to the original bill, however, which provide that 3½ per cent. bonds as well as lawful money may be received in exchange for the new bonds; reduce the amount of the bonds from three to two millions, and omit the provision exempting the bonds from State taxation. Secretary Folger appeared before the Committee on Thursday, but did not support the bill. He is said to prefer that the situation should not be changed. It is stated that Mr. Sherman will ask the Senate to consider his bill immediately after the holiday recess. No business of importance has been transacted in the House of Representatives. The deluge of bills continues.

The report of Mr. A. M. Gibson, Assistant Attorney for the United States, concerning the Star-service frauds, has been formally transmitted by Acting Attorney-General Phillips to the Postmaster-General, and will be published with the latter's annual report. It will be remembered that some weeks ago Mr. Phillips objected to receiving Mr. Gibson's report on the ground that there was nothing on the files of the Department of Justice to show that Mr. Gibson had been appointed Assistant Attorney. The report is said to be an exhaustive exhibition of the abuses which have prevailed in the Star service, and is published in accordance with the recommendations of the counsel employed by the Government in the Star-route cases.

Postmaster-General James has called the attention of the Government counsel in the Star-route cases to a law passed in 1872 which directs that the Postmaster-General shall cause suit to be brought to recover any money fraudulently obtained from the Post-office Department. In accordance with this statute, it has been decided to bring civil suits in behalf of the Government against the Star-route contractors.

The charters of 396 National Banks expire on or before February 25, 1883. The Controller of the Currency having called attention to this fact in his annual report, Senator Morrill of Vermont has introduced a bill the first section of which provides that any National Banking Association may at any time within two years previous to the date of the expiration of its corporate existence, with the approval of the Controller of the Currency, extend its period of succession for a term of not more than twenty years from the expiration of the period named in the original articles of association.

The Congressional Board of Visitors to the West Point Military Academy has made its annual report. The leading question discussed is the mode of selecting a Superintendent for the Academy. It is the opinion of the Board that no man properly qualified ought to be excluded from the position merely because he was not originally assigned to duty in a particular corps. The report recommends that any officer of the army not below the rank of Colonel be made eligible for the position of Superintendent of the Academy, and that he be paid a higher salary than at present; also that ex-officio rank, superior to that held by professors or other officers of the Academy, be conferred upon him. The report expresses disapproval of the practice now in vogue of allotting the five most distinguished graduates annually to a single branch of the service, and recommends that they be allowed to choose for themselves. Among the other recommendations is one that the course of instruction be increased by one year.

It is stated that the American Bar Association will shortly recommend the creation of an intermediary Court of Appeals which will have jurisdiction over certain classes of cases that now go to the Supreme Court of the United States.

The joint committee appointed by the Senate and House to arrange for memorial ceremonies in honor of President Garfield, have decided to invite Mr. Blaine to deliver a eulogy before both branches of Congress in the hall of the House of Representatives, on some day yet to be determined. Mr. Blaine has accepted the invitation.

The session of the court in the Guiteau case was cut short on Wednesday by the indisposition of one of the jurors. Three witnesses, however, were examined, all of whom testified that they had never doubted Guiteau's sanity. Another incident of Guiteau's career as a lawyer was brought out on this day. Guiteau was employed by a firm to collect a claim, half of which he collected and kept, insisting that he was entitled to one-half as his fee, and that the firm could take the second half whenever it came in. On Thursday more witnesses were examined, who testified to the prisoner's sanity. Among them was Dr. Young, the physician of the jail where Guiteau has been confined, who said that the prisoner was "bright, quick, and intelligent," and that he had "never seen anything about him that savored of insanity." The most important witness of the day, however, was General Joseph S. Reynolds. He had had a series of interviews with Guiteau on July 14, 15, 18, and 19, of which he had taken notes. The substance of these interviews, in so far as they brought out any matters of importance, was that Guiteau had made no reference to the inspiration theory, but had defined the assassination as a patriotic act, of his own conception, suggested from reading the newspapers; also that he seemed really to have believed that the "Stalwarts" would protect him, and was astonished when he found that they abhorred his act as much as any one. The theory of the prosecution that the idea of divine inspiration did not occur to Guiteau until after he found that he could look for no assistance from the "Stalwarts," was materially strengthened by General Reynolds's testimony. On Friday considerable commotion was occasioned in the court-room by the appearance of Mrs. Dunmire, Guiteau's former wife, on the witness stand. She testified positively that she had never seen in Guiteau any evidence of an unsound mind. In the afternoon Dr. Allen McLane Hamilton gave some testimony which was very prejudicial to the defence. He said that he had examined the prisoner, and had found none of the usual signs of imbecility or insanity in the contour of the head, lines of the face, teeth, roof of the mouth, nails, or tongue. He flatly contradicted Dr. Spitzka on a number of points. He said that he thought the prisoner looked "like a man playing a part." The wife of one of the jurors died on Monday. The trial was therefore adjourned until Wednesday.

Mr. Scoville delivered his lecture on the Guiteau trial on Wednesday evening, the 14th instant. A large number of tickets are said to have been sold, though the audience assembled

was rather small. The lecturer complained of the course of the press and the pulpit, and eulogized Judge Cox, than whom, he said, "no more candid, careful, conscientious, and judicious man could be found in the country." At the conclusion of the lecture a resolution was offered by one of the audience expressing sympathy with the prisoner's family, and complimenting Mr. Scoville on his management of the case.

Mr. Riddleberger, the Readjuster, was elected to the United States Senate by the Virginia Legislature on Tuesday. Considerable interest has been manifested as to which party he will support in the Senate. It is stated that he will "take his seat in that body untrammelled, so far as party pledges made by his friends are concerned."

Director-General Kimball has announced that, notwithstanding the many requests he has received to the contrary, the Atlanta Exposition will have to be closed on the last day of December.

Great excitement was caused in the city of Caldwell, Kansas, on Sunday by a raid made on the town by a party of cowboys, who did much indiscriminate shooting, which resulted in the death of Michael Meagher, formerly Mayor of Caldwell. The citizens drove the cowboys out of the town and pursued them for some distance. Several of the gang have been arrested, and it is very suggestively stated that it is "uncertain how they will be disposed of," as the citizens are very much excited.

An English gentleman, Sir Edward J. Reed, representing a number of European capitalists, has bought of Mr. Hamilton Disston, of Philadelphia, two million acres of lands in Florida. It is stated that Mr. Reed will organize a land company which is to have its headquarters in England, and will be conducted in connection with railroad companies in which Mr. Reed and his friends are interested. It is expected that the land will be settled rapidly by English and Dutch emigrants.

The stockholders of the well-known "Keely Motor" Company held a meeting in Philadelphia on the 14th inst. Resolutions expressing confidence in Mr. Keely were passed, but complaint was made that the inventor was "unreasonably secretive" as to the principles and methods of working his apparatus, and it was recommended that some person should be taken into his confidence.

Dr. I. I. Hayes, the well-known Arctic explorer, died in New York, on Saturday. He was born in Chester County, Pennsylvania, in 1832. He joined Dr. Kane's Arctic expedition in 1853, at the age of twenty-one. In July, 1860, he was placed in command of an Arctic expedition which met with great hardships. He served as surgeon in the Union army during the war, after the close of which he devoted himself to writing and lecturing. He received two gold medals, one from the Royal Geographical Society of London, and the other from the Geographical Society of Paris. On Sunday, George Edmund Street, perhaps the foremost living English architect, died. Other deaths of the week are those of Lewis H. Morgan, the eminent American ethnologist, and Siro Delmonico, of the firm of New York caterers.

FOREIGN.

The suit brought by M. Roustan, French Minister to Tunis, against M. Rochefort, the editor of the *Intransigeant* newspaper, was terminated on Wednesday, the 14th instant. The principal point brought forward by the defence was that M. Roustan had engaged in financial transactions of a doubtful character. The accusation that M. Roustan had been the cause of the war in Tunis was contradicted by a number of prominent members of the Ferry government, including M. Barthélemy-St.-Hilaire, late Minister of Foreign Affairs. During the trial M. St.-Hilaire and M. de Billing engaged in a violent altercation, each accusing the other of lying. The verdict of not guilty, which was rendered in spite of all the evidence that was brought forward to prove the falsity of M. Rochefort's charges, has produced a sensation in Paris. The political bearings of the case are said to have had an effect on public opinion which unquestionably influenced the jury. This verdict, by implication, strongly censures M. St.-Hilaire and M. Waddington.

Gabes has been selected as the chief military station of the French in the south. There is much dissatisfaction at this decision on account of the unhealthiness of the place. It is stated that certain powerful tribes south of Gabes have profited by the retirement of General Logerot's column to form a defensive alliance, and that their attitude is threatening.

The Tunisian authorities have forcibly expelled the employees of a certain Mr. Levy from the Enfida estate, and put the French claimants to the estate in possession. Mr. Levy has protested against this action, and has deposited with the British Consul in Tunis a procès-verbal detailing this last episode in the case.

It is stated that the Italian Government has approved the conduct of the Italian Consul in protesting against the French occupation of Tunis, and has refused to withdraw its protest. The Italian authorities continue to ignore the French protectorate, and have sent a man-of-war to Susa.

The insurgent Arab troops, of which a French column was in pursuit, have escaped into Tripoli.

Dams near Algiers, on the Oran railway, burst recently, flooding the railway, and, it is stated, causing the loss of over fifty lives.

Advices from Morocco state that 45,000 Arab families have entered the country and asked permission to settle permanently there. The Moorish Government has not yet given them any reply.

There was a stormy debate in the German Reichstag on Thursday on the subject of official influence in the recent elections. The debate lasted until past midnight, and ended in a resolution to refer the matter to the Election Committee. The Bundesrath has decided that the cost of incorporating the lower Elbe in the Zollverein shall be borne by all the States within the Union.

A despatch from Berlin says that the recent newspaper controversy between Prince Bismarck and Herr Windthorst, the leader of the Centre party, has put an end to all hopes for the present of a Parliamentary coalition of the Conservatives and Clericals.

On Friday the Reichstag, in spite of the earnest appeals of Count von Moltke and General von Kameke, Minister of War, refused to vote money for the establishment of a training institute for non-commissioned officers in Alsace. The Conservatives alone voted for the grant. This vote is considered significant as to the present state of parties.

The Reichstag has approved the bill for the erection of a new Parliament house in Berlin.

A correct list of the victims of the Ring Theatre fire in Vienna has been issued by the police. It gives the total number of victims as 794, the bodies of 144 of whom have been legally identified.

One of the results of the Vienna fire has been that very strict investigations have been made in most of the European cities in regard to the condition of the theatres. The authorities have ordered alterations in the Théâtre Français which will necessitate the closing of the theatre for a month.

It is stated in the *St. Petersburg Gazette* that there have been 1,500 arrests in Russia for political offences in the course of the present year. Many of these arrests were due to false accusations.

The Governor-General of Eastern Siberia arrived in St. Petersburg on Tuesday with the news that a steamer of the North American Polar Expedition had been discovered, and assistance rendered to the crew. This steamer was thought to be the *Jeannette*, and later despatches have confirmed this impression. The *Jeannette* was crushed in the ice on June 23, 150 miles northeast of the new Siberia Islands. The crew embarked in three boats, two of which have been heard from. Vigorous efforts are being made to discover the third boat. Captain De Long is among those saved. The survivors have suffered frightfully from exposure.

The organization against the payment of rent in Ireland seems to be becoming still more powerful. It is said that it is now regarded to be as much a crime to go into the Land Court as to pay rent. Outrages are as prevalent as ever. The Lord Lieutenant has issued a circular to the Irish police, informing them that the proclamation declaring the Land League a criminal association, included females, and directing them to take measures against any woman participating in any illegal proceedings. On Sunday a quantity of arms and ammunition were discovered in a house in Dublin and four persons were arrested. It is said that there is no doubt that the material is associated with the Fenians. As an instance of the state of things in certain counties, armed bands are going about nightly throughout Clare, Kerry, and Tipperary, firing into houses and so intimidating the occupants that they are afraid to report the facts to the police. There are a few hopeful signs, however. Several convictions for agrarian offences have been obtained at the current assizes, and Mr. Herbert Gladstone, speaking at Manchester on Friday evening, said that during his recent tour in Ireland, he found that the condition of things had been very much exaggerated in England, and that the alarmists took their standard from the worst counties. The Marquis of Hartington also, in a recent speech, said that the power of the Land League was now broken, and that it was impossible for the present guerrilla warfare to succeed.

The English press very generally disapprove of Mr. Blaine's letter of instructions to Mr. Lowell in regard to the Clayton-Bulwer treaty. The principal point remarked upon is Mr. Blaine's assumption that the moment a war should break out Great Britain would disregard her treaty obligations with regard to the neutrality of the canal. It is asked why, in view of this distrust, Great Britain should be expected to repose implicit confidence in America's pledge not to impose discriminating duties on goods in transit.

An explosion occurred in a coal pit at Bolton, England, on Monday, in which thirty-four persons were killed and thirty-six injured. The pit was considered one of the safest in England, as neither gunpowder for blasting nor furnaces for ventilation were used, the whole system of working the mine being purely mechanical. It is believed that the explosion was caused by the falling of a portion of the roof, which liberated some gas.

The English Government has granted permission to the German Union Telegraph Company to use Valentia as a connecting point for a cable to be laid from Emden, uniting Germany directly with the Anglo-American system of telegraph cables.

There was a considerable decline in American securities in London on Monday, for which no good reason can be assigned. The feeling of the market is reported to have closely approached the character of a panic.

It is stated that the question of the advisability of the Pope's departure from Rome is being seriously discussed.

A despatch from Lima, dated December 14, confirms the rumor that ex-Dictator Pierola has resigned. Montero, Vice-President under Pierola, is now recognized by the whole of Peru. The interior of the country, however, is broken up into numerous factions.

Mr. Hamlin, the new United States Minister to Spain, presented his credentials to King Alfonso on the 20th inst.

TUESDAY, December 20, 1881.

WINDING UP PERU.

THE unwillingness of Chili to settle with Peru on any terms short of a cession of territory is explained by the fact that Peru is an insolvent concern, and its promises to pay money are practically worthless. It has a known debt of some $200,000,000, represented mainly by bonds held in Europe, and its revenue is insufficient to pay the interest on this. This is nothing, however, to the liability set up by the "Peruvian Company," which, according to a memorandum addressed to the State Department by the Chilian Minister, foots up $1,025,000,000. This is based on the old claims of Cochet and Landreau as alleged discoverers of the commercial value of the guano deposits in 1833—a discovery generally believed to be involved in an obscurity something like that which still hangs round the original inventor of gunpowder. At any rate, the Peruvian Company has acquired the Cochet claim, and proposes to acquire the other in case it is worth acquiring, and is "stocked" at $250,000,000. It now proposes, as they say in England, to "take over" Peru and wind up the concern and settle with the other creditors, Chili included. For this purpose it has got a charter from the Legislature of Georgia, and, according to an interview with the president of the company, Mr. J. R. Shipherd, of this city, published on Saturday, has served notice of its demand upon Chili, Peru, and the United States; its claim against Chili being based on the fact that that Government is now collecting a royalty on the guano exports.

The despatches published on Monday with regard to the claims put Mr. Hurlbut in a better light than heretofore, and show at the same time that the State Department has been managing the matter calmly and with evident desire to avoid any imbroglio. With regard to the Cochet claim (say $900,000,000), which is the main basis of the Peruvian Company, Mr. Blaine in August last directed Mr. Hurlbut to investigate it for the purpose of ascertaining whether there were any persons connected with it whose nationality as American citizens entitled them to demand any representations from our Government. As to the Landreau claim (say $125,000,000), Landreau, the original owner, having been an American citizen, Mr. Blaine directs Mr. Hurlbut to call Peru's attention to the denial of justice in the case, and insist upon some adequate means being provided by which a judicial decision can be obtained as to the merits of the claim. He further suggests that if Peru is compelled to cede to Chili territory including the guano deposits on which the Landreau claim is based, "it should be understood that this claim of an American citizen, if fairly adjudicated in his favor, shall be treated as a prior lien on the property to which it attaches, and that Chili accepts the cession with that condition annexed."

Fortunately, in this instance, Mr. Hurlbut seems to have understood his instructions; partly, perhaps, because Mr. Shipherd, the president of the Peruvian Company, who is "running" the claims, has himself a mind somewhat of the Hurlbut class—only much "more so." In fact, to judge from his publications with regard to these claims, he could give Mr. Hurlbut "points" in rhetoric and the rapid development of convenient principles of international law. His communications seem to have sobered Mr. Hurlbut, who refers, in a way very different from that which he adopts in talking to Don Patricio Lynch, to two "very extraordinary" letters written by that capitalist and "some printed matter," which we risk nothing in saying was very extraordinary too, and declares that as to the Cochet claim the legation is in possession of "nothing but vague and sweeping statements, better adapted to creating a commercial enterprise than to any judicial or quasi-judicial action." In closing the letter he returns to Shipherd, who evidently is a fascinating study to him, and declares that "if half his statement is true (as to the Cochet claim) and the United States assume charge of the claim, we should own Peru by a mortgage which can never be paid." He encloses in this despatch extracts from a letter in which Shipherd represents himself as asking Mr. Blaine for a "preliminary injunction" against anything being done with the nitrate and guano deposits until the property right of the claimants is settled; a request to which Mr. Blaine was quoted as replying in the following memorable words: "That you will get, and I will make it my first business." About a month since Mr. Blaine sent a despatch in reply to Mr. Hurlbut's, formally repudiating the Cochet claim, and directing that the Landreau claim should not be pressed on Peru so as to embarrass her in her present condition. Mr. Blaine, too, thinks Shipherd "very extraordinary," first, because he had told him expressly that his (Shipherd's) instructions to United States ministers abroad could not be regarded as of any weight; and, second, that the language attributed by him (Shipherd) to him (Blaine) about the preliminary injunction was "grotesquely absurd." He winds up his letter with the golden maxim that "legations of the United States in foreign countries must not be converted into agencies for the prosecution of private claims." This was followed by further instructions warning Mr. Hurlbut, first, against using his position in any way to aid speculative enterprises of any kind; second, specifically not to aid the "Crédit Industriel of France," nor again the Peruvian Company, which he does not seem to regard as controlling the Landreau claim.

Now, this is all very wise and sensible, and the course pursued by the State Department has evidently kept the country out of some disagreeable complications The caution displayed by Mr. Hurlbut, and his unwillingness to act on his own responsibility in matters involving pecuniary liabilities and demands, contrasts very satisfactorily with his wild political pronunciamientos. The apparition of Shipherd seems to have acted upon him in these matters somewhat after the manner of the temperance lecturer's "horrid example." The Peruvian Company will now in all probability be investigated at Washington, and this source of diplomatic danger may be regarded as out of the way.

The suggestion that the Landreau claim be pressed upon Chili if Chili takes Peruvian territory, calls for very little comment. If the claim is a good one, Chili is bound to assume its payment, as successor to the rights and liabilities of Peru; but it is hardly necessary to say that this has no bearing on the question discussed with so much fierceness by Mr. Hurlbut as to the right of Chili to take territory as an indemnity. The United States has no means of clapping an attachment on the property, and working out the supposed lien of Landreau in a court of law. To interfere in such a way with Chili would mean war, and the State Department evidently has never meant to go to war with Chili. It is obvious that there is not enough Peru to "go round" among the claimants upon the assets, and as winding up foreign insolvent concerns of this kind is no part of the business of the United States, and as the Administration has expressly recognized the rights of Chili as a primary lien, it is not likely that the Peruvian Company will get much of the assets. The difficulties presented by the situation have struck Pierola so forcibly that he has run away and taken ship to Europe.

THE REGENERATION OF THE PRIMARY.

THE special committee of the Young Men's Democratic Club have made a report, on primary elections in this city, which contains some important suggestions in the direction of those which we have recently been producing in these columns. It acknowledges that no full attendance at primaries can be obtained as long as they are held simply for the purpose of electing delegates to a nominating convention, because the firm conviction of the mass of the voters is, that the result of such elections is always arranged beforehand, or, as the report says, "is fixed up by some job or ring influence." It acknowledges, too, that "the better element" of the party in this city will not go to primary meetings in the evening under any circumstances, and will not go at any hour "at the risk of encountering a crowd, or being hustled or jostled by intoxicated men." It therefore proposes that every primary meeting should vote directly for the party nominees, and not for delegates to a nominating convention; that the polls should be kept open all day, so that business men could consult their own convenience as to the hour of going to them; that the sanction of law should be given to primary meetings; that there should be legal penalties for frauds committed at them and for violent disturbances of them, and that there should be an enrolment of the party voters partly on personal application and partly on house-to-house visitation.

The committee cite in support of their recommendation of the direct vote the trial of the plan during the last ten years in Richmond, Va. There the primary votes directly for the candidate, and the polls are open all day. The result has been the extirpation of municipal bosses, and an extraordinarily full vote. In 1876, when all the municipal offices were to be filled, 6,200 Democrats out of 7,500 registered voted on the nominations at the polls of the primaries. If we could obtain anything approaching to the same proportion of the party vote

on nominations of both sides in this city, what a gain it would be! Moreover, the power of every boss is built up and maintained by his skill in "controlling" or "fixing" primaries. His whole system of management rests on this. A primary can, of course, be most easily "fixed" when it is small, and when its action is so indirect that an outsider cannot tell what its effect will be. Consequently every boss likes to have it attended by as few persons—provided they are of the right kind—as possible, and (for this purpose) likes to have it held at inconvenient hours and under conditions likely to alarm or disgust what Democrats call "the better element," or in other words all that portion of voters who are busy and do not make a profession of politics. In this way he has only his own adherents to deal with, and by confining the work to the election of delegates to another convention he introduces a fresh element of uncertainty into the transaction which increases his power of making "deals."

There is no question that the withdrawal of the nominating power from the little nocturnal gatherings which now exercise it, and giving it to the main body of the voters voting in daylight, under the same guarantees as to order and honesty which now surround the elections, would, in the great cities at least, be an enormous gain, both for politics and morals. Public morality even more than good government calls for the destruction of the bosses. The effect on the young men of the spectacle of their methods and their success is, and cannot but be, in the highest degree corrupting. All publicly recognized success which is won by trickery and occult instrumentality gives a lesson to the young against which schools and pulpits contend in vain.

The bosses will never be put down by mere denunciation or exhortation. It is not want of dislike of their practices on the part of the public which makes them flourish. It is the fact that they have behind them a nominating system, not exactly of their own contrivance, but which they have learned to turn to use for their own advantage. Moreover, it is a system which produces bosses in endless succession, no matter how many individual bosses may be overthrown by popular risings. As long as the Machine remains, persons competent to handle it will constantly reappear. The radical cure, therefore, is to be found in the destruction of the Machine. The actual assemblage of the party voters for the purpose of nominating candidates may be desirable in country towns, where everybody knows everybody, where the demands of business and society upon the time of individuals are small, and where there is no adequte discussion of local affairs through the press. But in large cities, meetings for purposes of deliberation or comparison of views are never held, and if held would be a mockery. Meetings never take place in cities, except to listen to selected speakers, supporting a cut-and-dried platform, or, as in the case of primaries, to confirm by vote a prepared programme. The discussion and deliberation of large and dense communities are now done and have to be done by the press, and are done by the press far more effectively than they could possibly be by any real debate. No voter who goes to the polls in a great city could possibly learn from attending a nocturnal primary anything about the considerations which should affect his vote, while he would lose a good deal of valuable time.

It is to be remembered, too, that if it be, as is generally conceded, of great importance that "the better element" in both parties should take part in politics, the tastes, habits, and requirements of the "element" will have to be considered. "The better element," like the bad element, is human, and cannot be got to do what it does not like to do, except by the infliction of legal penalties. Unless it is proposed to make it take part in nominations by the aid of the police, the work must be adapted to its idiosyncrasies, and one of the strongest and best ascertained of these is dislike to leaving home after dark, to engage in wordy or other warfare in crowded rooms with persons in liquor. If this were a condition of voting at elections, they would soon cease to vote. But voting at elections being safe, orderly, and convenient, they vote. Where would be the harm of making party nominations safe, orderly, and convenient?

CLASSICAL AND NON-CLASSICAL TRAINING FOR THE HIGHER EDUCATION.

A SIGNIFICANT and somewhat remarkable paper on the place of classical and non-classical studies in a liberal education has recently been placed before the public in Germany. Before the year 1870 those German students who had received their preparatory training in a real-school instead of a gymnasium, were obliged either to forego a university education or to seek it in one of the non-Prussian universities. The result was, that an increasing number of Prussian students were annually finding their way to Göttingen, Leipsic, Heidelberg, and the other university cities lying beyond the Prussian borders. Accordingly, in the year 1869, the Minister of Public Instruction, Herr von Müller, addressed a note to each of the universities of Prussia, asking their several faculties to consider carefully and report "whether and to what extent the holders of diplomas from the real-schools should be admitted to the pursuit of liberal studies in the universities." In response to this invitation each of the faculties gave to the question such careful consideration as the importance of the subject and the significance of the inquiry seemed to demand. Though the answers, taken as a whole, were decidedly adverse to the admission of students from the real-schools, yet the Government determined not to act upon the views presented in the reports, but to open the doors of the universities to non-classical as well as to classical pupils. By the decree of Dec. 7, 1870, it was determined that Prussian students desirous of studying mathematics, natural history, and modern languages might be admitted to the privileges of the universities on the presentation of a diploma from any one of the real-schools of the first rank. Thus, by fiat of the Government, an entirely new element was introduced into the universities.

After ten years of experience under the new régime, the Philosophical Faculty of the University of Berlin now put upon record their impressions as to the influence of the change. The motion which called out the expression thus published was introduced into the Faculty by Prof. Droysen, the well-known historian. Its first form was that of a memorial asking the Ministry of Education to consider whether the interests of higher learning did not demand a discontinuance of the privileges extended to scholars from the real-schools. This memorial occupied the attention of the Philosophical Faculty during several sessions. As its first form did not secure the unanimous assent of the members, the paper was changed from a memorial to a memorandum; and, in the phraseology in which it was finally adopted, this paper received the signatures of all the scientific as well as of all the classical members of the Faculty. As now for the first time published, it occupies ten octavo pages; and, in view of the unanimity with which it was adopted, it will hardly fail to be regarded as the most powerful plea ever made in behalf of classical studies.

First of all, the memorandum calls attention to the fact that the proportion of non-classical to classical students has been steadily increasing, at such a rate as to threaten an entire change in what may be called the dominant characteristics of the University. The aggregate number of students from the gymnasia has not, indeed, diminished, but the number from the real-schools has so increased as to be about three times as great as it was five years ago. Of all the students admitted to the Philosophical Department of the University of Berlin during the winter semester for 1879-80, thirty-seven per cent. were from real-schools. At the present rate of increase, in five more years this class of students will constitute a majority, and by that very fact will quite revolutionize the prevailing tone of university life. Such an impending change justifies a careful inquiry into the scholarship of the students from the real-schools; and ten years of experience enable those members of the Faculty into whose classes students from the real-schools have been admitted, to speak with considerable confidence. It is in the testimony given by the professors of mathematics, of the natural sciences, and of the modern languages that the real importance of the memorandum is to be found.

Those professors of mathematics who teach the mere elementary branches, and whose lecture-rooms are therefore generally sought by students during the first year of residence at the University, testify that they have discovered no important difference between the two classes of students. But, on the other hand, both of the professors who give instruction in the mathematics of more advanced grade certify that the students who have received their preliminary training in the classical schools, although less advanced at the beginning, show a clearer insight into the subtleties of the more abstruse mathematical relations, and, before they have gone very far, leave the non-classical students quite in the rear. The testimony of the professor of astronomy is of the same import. Both in the Observatory and in the Bureau of Weights and Measures he has noted a marked distinction between the two classes of students. His words are: "The students prepared at the real-schools show at first more knowledge and more skill than those prepared at the gymnasia, but their further development is slower, more superficial, and less independent, while they show still greater inferiority in point of ability to carry on the more difficult processes of independent research."

The professors of chemistry say that students from the real-schools cannot, in their branch of study, be placed upon the same plane as the students from the gymnasia. Professor Hofmann observes that the matriculants from the non-classical schools often show, at the beginning of their chemical studies in the University, a more rapid progress in acquiring a knowledge of the elementary principles of the science, as well as a greater dexterity in the early processes of chemical manipulation; but that, before their

studies have advanced very far, these relations are reversed, and the non-classical students are left behind. He adds that his experience is by no means new; that the same fact had often been observed by Liebig. Professor Rammelsberg gives similar testimony in regard to students in the School of Technology. He says that of those who take his lectures on chemistry during the first semester, the students trained in the gymnasia, though without any previous knowledge of the subject, take a far greater interest in the instruction than that shown by the students from the non-classical schools. He remarks that almost invariably there is with the students from the real-schools a certain indifference (*Blasirtheit*), begotten of an early familiarity with the subject, that is fatal to the most rapid and successful progress. At the final examinations the work of the non-classical students is generally inferior to what in advance would be expected, while the work of the classical students is almost invariably better.

From the other branches of scientific study the testimony is somewhat less emphatic, though it is invariably of the same general import. In the teaching of modern philology the experience of the several professors is not essentially different from that of the instructors of chemistry. Professor Tobler testifies that in his seminary for the more thorough study of the French language and literature he has not been able to detect any very considerable difference between the two classes of students. The professor of English, on the other hand, says that the attainment of the non-classical students is greatly inferior; and, what is of still greater importance, they almost invariably show a want of keenness of apprehension and independence of judgment that prevents them from taking any other than a prescribed method. The same professor (Zupitza) testifies that, as a member of the Examining Commission of the Government, he has noticed that, although the students prepared in the real-schools begin their studies of English before they go to the University, their knowledge of the language at the completion of their University course is generally much inferior to the knowledge shown by the classical students. Herr Müllenhoff, one of the professors of the German language and literature, uses these expressive words: "According to my experience, it is hopelessly impossible for a student prepared in a real-school to acquire what may be called a thoroughly satisfactory development. No one ever acquires it through the study of the modern languages—no one without the solid foundation of a training in a gymnasium." Scherer, the other professor of the same subject, complains of the constant embarrassment to which he is subjected by his inability to introduce to his hearers comparisons between the German linguistic forms and the corresponding forms in the ancient languages.

It is in view of such representations as these that the Faculty finds itself unanimous in its belief that the admission of students from the real-schools has been injurious to the interests of higher learning. The professors in all those departments to which non-classical students are admitted are constantly embarrassed by a certain want of homogeneity in their classes. They must either address themselves to the weaker portion of the class, with a consciousness that they are wearying the better scholars by their excessive simplicity, or, if they resort to the other view, they are obliged to carry forward their work with a depressing consciousness that they are not understood by a considerable portion of their hearers. Unless the prevailing tendency is arrested, the inevitable result, in the opinion of the Faculty, will be that the supreme excellence of scholarship which for half a century has made the German universities famous all over the world, will be a thing of the past.

THE GEWANDHAUS CENTENNIAL.

LEIPZIG, November 27, 1881.

THE seventh Gewandhaus concert for this season was given on Friday, November 25 (this day being the one hundredth anniversary of the inauguration of the Gewandhaus Concert Hall in Leipzig), and was in every way worthy of the event it commemorated.

The concert was opened by an overture by Capellmeister Reinecke, with the motto, well known to all frequenters of the Gewandhaus, "Res severa est verum gaudium." A soft and dreamy introduction, followed by the actual overture in stricter style, awakened a responsive chord in the breasts of the audience, as the hearty and long-continued applause testified. Following the overture, a prologue, written by Rudolph von Gottschall, was spoken by Frau Hildebrand von der Osten. The poem told of the artistic triumphs and well-deserved success of the institution, and of the great names which had appeared on its programmes, and closed with a prayer for the well-being of the present and future directors and members. The remainder of the programme was arranged in chronological order, as follows:

G-major symphony (No. 13 of the Breitkopf and Härtel edition), .	*Haydn.*
Concerto for violin and viola, .	*Mozart.*
Overture to Coriolanus, . .	*Beethoven.*
D-minor symphony (No. 4), .	*Schumann.*

The orchestra was at its best, every member undoubtedly feeling that remissness at such a celebration would be little short of criminal. We were forcibly reminded of a remark made some years ago by a member of the orchestra, that he always assisted at a Gewandhaus concert with a feeling akin to awe. This feeling pervaded all present, audience and performers alike, and lent an air of imposing solemnity to the proceedings. The finale of the symphony by Haydn was enthusiastically encored; the Mozart concerto was played by Joachim, who fairly surpassed himself in its execution.

Together with the programme for the present concert, each hearer was presented with a small, yellow bit of paper of modest appearance—the facsimile of the programme of the first concert held by the old "Concertgesellschaft" in the then new Gewandhaus Hall, on the 25th of November, 1781. What wonderful visions of the past it awakened! Many in the present assemblage had seen the Gewandhaus orchestra rise, at the time of Schumann and Mendelssohn, to that foremost place which it still holds among European orchestras. In 1781 its position was relatively higher still, we may even say unique, in its independence as a *city orchestra*, others being then dependent on the various courts or on rich private individuals, and liable at any moment to suffer a change for the worse. The smaller orchestras, too, were apt to give preference to the works of one composer, to the almost total exclusion of others. The Gewandhaus has, on the contrary, presented the greatest variety of works and authors; of these last no less than 870, among them 42 whose names have attained enduring fame. Of Bach's works, 65 of greater or lesser note have been performed; Beethoven is represented by 103; Mendelssohn by 108; Schumann by 114; Reinecke by 62, etc., etc. The compositions given in the first concert are practically unknown, and even the names of the composers are now scarcely mentioned. Haydn is the first great name met with on the old programmes, a symphony by him having been performed December 6, 1781, in the third Gewandhaus concert. Mozart appears for the first time in January, 1782, as author of a "Sinfonie, vom jüngern Mozart" ("Mozart the younger," to distinguish him from his father, Leopold Mozart, who had made a decided sensation through his "Musical Sleigh-ride," with kettledrums, trumpets, oboes; five sets of sleigh-bells, and four persons with couriers' whips; particularly in the Andante, "as the heated horses shake themselves," and the Adagio, which "presents a lady trembling with the cold"); and for the second time in 1786, after which date he rose gradually but surely to his later commanding position. To Madame Schicht, whose husband afterward became Cantor of the Thomasschule, belongs the honor of having been the first to introduce Beethoven to the Gewandhaus audience, in the aria "Ah, perfido," on Michaelmas Day, 1799. Bach appears in 1805, as the composer of a "Messe in zwei Choeren," which produced, according to the reviewers of the period, a great effect, although the work has been since pronounced spurious. At the head of the programme for the 1st of February, 1827, we read the following: "Symphony by Felix Mendelssohn-Bartholdy, in Berlin (for the first time, MS.)." This was probably the Symphony, op. 11, which was published shortly thereafter, and which since that evening has never again been given in the Gewandhaus. The attention of those interested in Gewandhaus statistics may be directed to a new work by Alfred Dörffel, "Festschrift zur 100-jährigen Jubelfeier der Einweihung des Gewandhaus (Concert) Saales," published under the auspices of the directors. It can be had of Fr. Kistner or of any dealer in music in Leipzig. With Schumann the Gewandhaus concerts may be said to have reached, at least for the present, the termination of the cultivation of the modern school of music. The existence of Wagner, Liszt, Rubinstein, Berlioz, and others, is, to be sure, not quite ignored; but these masters, whose influence on the present and future development of musical culture is simply incalculable, can scarcely feel flattered by the amount of attention bestowed upon them. This fact is often made the ground for complaint against and censure of the directors. On the other hand, every true lover of music must rejoice that, in the midst of much change and of real and imaginary progress on all sides, at least one institution devotes itself to the performance of those works which, in the course of the last half-century, have come to be regarded as classical, and an acquaintance with which, in their purity, is indispensable to every educated musician. To-day, as one hundred years ago, the Gewandhaus stands alone; now, however, no longer as an experiment, but as a tried and trusted supporter of the best in art.

At the inauguration of the hall a reviewer wrote:

"I was much rejoiced to hear that the new concert hall, the building of which has cost several thousand thalers, was to be inaugurated. Perhaps no other city in all Germany can show such a hall. More than 500 persons were present, and there was nevertheless room for many more. The frescoes on the ceiling are by Oeser, and, according to connoisseurs, are masterpieces. The music makes a wonderful effect in this high and tasteful hall. Herr Berger played a violin concerto with great applause, and one could hear the softest and faintest tones in the most distant corners. . . . Over the orchestra, in the midst of which stands an organ for use in sacred concerts, are two boxes, one for the drummer, the other for the trumpeter; by this arrangement some room is saved in the orchestra; but when the chorus is no fuller than to-day, the drums and trumpet are much too loud, and unpleasant to the ear."

Now, after the old hall has done duty for a century, it is, in its turn, to be supplanted by a new one. The site for the latter, on the left bank of the Pleisse, between Schimmelsteich

and the old Botanical Garden, is definitely fixed upon; the City Council lends funds to the extent of 400,000 marks, and the work will undoubtedly be begun in the spring of 1882. May the next hundred years be as productive of pleasure and benefit to all concerned as the century now so happily brought to a close! T. B.

RENAN'S MARCUS AURELIUS.

PARIS, November 25, 1881.

'MARCUS AURELIUS' forms the last volume of the series which M. Renan has written on the 'Origin of Christianity.' He will not rest, however, but informs us that, having resolved in early life to write on the "Development of the Christian Religion," he threw himself at once *in medias res*, and began with the life of Jesus, because Jesus was the central figure of his work. Now he thinks of tracing the origin of Christian ideas in the history of the Jews. Christianity, in his opinion, may be said to commence before Christ—even eight centuries before him—when the religion of Israel became a pure religion, different from the materialistic and coarse doctrines of the East. He will show us, in his history of the Jews, how a religion which at first did not differ much from that of Ammon or of Moab, became purified, and how the scene of the world became prepared for the apparition of Christ.

Let us return, however, to the end of this great work, and see how Christianity, two centuries after Christ, had a sort of rival in the philosophy of Marcus Aurelius. It is no exaggeration to say that Antoninus and his successor, Marcus Aurelius, represented on the imperial throne the maximum of virtue of which humanity is capable when it follows the dictates of reason and of conscience. The principle of adoption produced this admirable succession of sovereigns, and it is not to be wondered at if Renan places this principle above the principle of heredity, which afterward founded all the monarchies of the middle ages. The throne ceased to become a property, a right; it became a duty—the Emperor accepted his weight of responsibility with a sort of resignation.

When Antoninus, on his deathbed, ordered that the statue of Fortune should be carried into the room of his successor, his successor had already measured, from the heights of his Stoic philosophy, the value of all human greatness. He had been brought up as a philosopher; his life was as regular as that of a monk. His moral nature had been purified; he was almost humble. He looked upon vice with pity, thinking that vice was chastised by itself. He meditated incessantly upon the duties of man to man. "He only lacked decision," says Renan, "on one point: he never dared to deny supernaturalism. To be sure, we share in his fear of atheism; we understand what he means when he speaks of his horror for a world without a God and a Providence, but what we do not understand so well is, that he should speak seriously of God's intervening in human affairs by 'special providences.' The weakness of his scientific education explains such an error."

As a sovereign, Marcus Aurelius was a Liberal, in the modern sense of the word; he respected men, he did not wish to impose even what he thought right by force. He was a republican at heart; he admitted the principle now developed by the socialistic school, as well as by the Chancellor of Germany, that the state, as such, has distinct and paternal duties toward all its members. He was not an economist, and understood that the struggle for life must make victims, and he was not willing to leave these victims uncared for on the battle-field. He did more for public assistance than any other Emperor—for the sick, for children, for slaves, for women. He was desirous of making an end of the hideous scenes of the Roman amphitheatre, but he could not do it. "You may," says La Bruyère, "alter all the laws of the state, and rob the citizens of all their rights and liberties; but do not attempt to change the signboards of the shops." The world was now governed by the philosophers, and Plato might have been satisfied. The Greeks had conquered Rome in their turn; their noble and generous ideas had entered into the blood of the cruel and materialistic Latins. Rusticus the philosopher was the friend and adviser of the Emperor. Ill-kempt, ill-shaved philosophers, in dirty and almost ragged tunics, coming from Greece, from Syria, from all parts of the world, were seen in the public places of Rome, full of the pride of cynicism and of philosophy. They were great place-hunters, and their ambition, ill concealed under high phrases, offended the old consular families.

Philosophy was assuming the character of a religion, or rather of a sect:

"It had its preachers, its missionaries, its directors of conscience, its casuists. The great personages kept in their society a familiar philosopher, who was their friend, their monitor, the guardian of their souls. The first condition of the new profession was a venerable demeanor, a fine beard, a certain way of wearing the toga. . . . Before dying, people talked with some wise man, as we now call in a priest to give to our last moments a moral and religious character. Julius Canus goes to his execution accompanied by his philosopher; Thrasea dies assisted by the Cynic Demetrius."

The philosophers were especially the mentors of the emperors. They took upon themselves the part which the Jesuits took in our time in Spain, in France, in Italy. The progress of the philosophical school marked, it must be acknowledged, the decadence of the Latin world. It ushered in the Byzantine and Greek Renaissance. It was, in many senses, fatal to Rome: it enervated it, weakened the old military spirit, effaced the Latin pride, made Rome less imperial. It did for Rome what the progress of humanitarianism and of liberalism may one day do for Great Britain. In this way philosophy may be said to have paved the way for the triumph of Christianity: Marcus Aurelius paved the way for Constantine.

Officially, Philosophy was hostile to Christianity. The Christians were looked upon as fanatics. Marcus Aurelius had little regard for them; he considered them as Jews, and the Romans were very anti-Semitic. He admired the courage of the martyrs, but he was shocked by their triumphal way of dying; the Stoics had taught him that man must bear pain and death, but not look and search for it. He did not change the laws with regard to the Christians, though he did his best to destroy their effect by great severity toward those who denounced the Christians falsely. Tertullian praises his goodness and generosity.

Rome, under Marcus Aurelius, was at the height of its material greatness. It was the capital of the Christian church. The reconciliation of Peter and of Paul had taken place; the church of Peter was admitted to be the cornerstone. Till the reign of Constantine, all dissensions within the Church were ended by the arbitration of Rome. The Greek word "Catholic" was probably first used in Rome in application to the Church. Other churches in the East, in Greece, worked more for the dogma; Rome did everything for the discipline—it made Catholicism. I will not attempt to give a history of the Church in this second century; you must read in Renan what concerns the theological development of the time. It is a dark and confused history, which, even under his magic pen, preserves much obscurity and a certain dulness. The most distinct trait, the final effect, is the triumph of the episcopal principle in the Christian Church. There are parts of this history which it is difficult to analyze—I mean the relations created between the two sexes by the new religion. Montanism created a certain sort of asceticism which was not without its dangers: "The Montanist," says Renan, "kept stirring the cinders under which always lie dormant fires. The precautions which they took prove a certain preoccupation which is in reality more lascivious than the liberty of the man of the world."

The early novels inspired by these Montanistic ideas are a curious mixture of chastity and of sensuality.

"Chastity," writes Renan, "is an indulgence, and shame is one of the forms of love. The men who fear women are generally those who love them best. How often can we not say to the ascetic: 'Fallit te incautum pietas tua.' In many parts of the Christian community the notion often reappeared that women ought never to be seen; that their life ought to be a life of seclusion, after the fashion which has prevailed in the Mussulman world. It is easy to see that, if such a thought had prevailed, the character of the Church would have been altered. What distinguishes, indeed, the Church from the mosque, and even from the synagogue, is the fact that woman enters the Church freely, as man does."

The Catholic Church did not make a separate place for women, and even gave them some functions in the Church. The pagans saw this confusion of the sexes with a low feeling of irony:

"The legend," says Renan, "shows the pagans jealous of the privilege which the priest enjoys of seeing a moment in her baptismal nudity those whom the holy immersion will make his spiritual sisters. What shall we say of the 'holy embrace' [Saint Paul], which was the ambrosia of this chaste generation, which was a sacrament of strength and of love, and the memory of which, mixed up with the grave impressions of the eucharistic act, filled the soul for many days with a sort of perfume? Why was the Church so beloved that, in order to reënter it after they had left it, men faced even death? Because she was a school of infinite joy. Jesus really was, among his disciples, even a hundred years after his death, still the master of exquisite delights, the initiator of transcendent secrets."

Let us return to Marcus Aurelius. He saw that the real danger of the Empire was not in the East, but across the Rhine and the Danube. He did not like war; nevertheless a great part of his life was spent in insipid campaigns against the Quadi and the Marcomanni. He delivered Pannonia, and drove back the barbarians to the left side of the Danube. After having spent the whole day with his army, he spent the evening alone in his tent and philosophized. He read the 'Conversations of Epictetus,' by Arrian; he wrote his 'Thoughts' on his tablets.

"Men look for solitary retreats, for rustic huts, sea-shores, mountains; like everybody, you too like to think of such things. What folly, since you can, at any instant, retire into your own soul. Nowhere has man a more tranquil retreat."

The 'Thoughts' of Marcus Aurelius are not lessons of philosophy—they have nothing dogmatic; they are merely the effusion of a delicate, generous, and noble soul, full of a truly Christian charity and love for all men. Marcus Aurelius has no definite ideas on any point.

"Our good Emperor," says Renan, "was in advance of many centuries. He never cared to be consistent with himself on such subjects as the soul or God. As if he had read the 'Critique of Pure Reason,' he saw well that as soon as we deal with the infinite there is no absolute formula, and that in such matters our only chance of having once perceived the truth is to have often been in contradiction with ourselves. He sepa-

rated moral beauty from any fixed theology; he did not link duty with any metaphysical opinion or primary cause. Never was the intimate union with the unknown Good carried to such extraordinary delicacies."

"Offer," says Marcus Aurelius, "to the God who is within thee a man, made serious by age; a friend of the public good; a Roman; an Emperor; a soldier at his post, waiting for the signal of the trumpet; a man ready to leave life without a regret." The 'Thoughts' are full of such sentences, stamped, like medals, with a certain Roman rigidity. Can we wonder if the early painters of the Renaissance always made a place in their compositions for some of these wise men of antiquity?

FRENCH AND ENGLISH TENDENCIES IN EGYPT.

ALEXANDRIA, November 23, 1881.

THE excitement about the press has somewhat subsided, at least for the time, though the peace brought about is rather of that kind which the Roman historians described as the result of desolating victories. The finale of M. Laffon, the editor of *L'Égypte*, was dramatic, and, owing to the destitution of public news, of which the suppression of that paper was at once the symbol and the climax, it was difficult for a time to disentangle the real facts. It seems, however, undeniable that either the objectionable passage in the paper, or—as is not improbable—the gross and ignorant translations of it into the Arab papers, led to the antipathy to the editor felt in religious circles in Cairo taking the form of an organized conspiracy. The result was that the French Government was appealed to by M. Laffon to intervene for his protection against personal outrage. The Egyptian Government, however, professed themselves unable to guarantee his security against secret violence, and he finally consented within two or three days of the suppression of the paper to leave by the Messageries' boat for Marseilles. He was conveyed, with an escort of soldiers, to the steamboat, and detained in his cabin till its departure. It is alleged that when the boat left, at two o'clock, a salute was fired from guns in different quarters to give notice that the enemy of the faith had quitted the country, and that the faithful might desist from further research. I give the facts as they were told me by a trustworthy person who heard the guns, and had informed himself satisfactorily as to their occasion.

The result of all this has been a miserable impoverishment of the daily press. Most of the papers are either in the pay of the Government or are hoping and trying to become so. The English organ, the *Egyptian Gazette*, takes the prudent course of transcribing *literatim* from the *Pall Mall* and the *Saturday Review* long articles on Egyptian subjects. The cholera at Mecca, which has been really a matter of serious concern to the consular authorities here, and has given rise to drawersful of correspondence between agents of all sorts with a view to restricting its spread without unduly interfering with commerce and locomotion, has supplied a tolerably innocent subject for occasional paragraphs.

Lord Granville's despatch of the 4th of November to Sir Edward Malet, the British Consul-General, is a document of considerable importance for those who are practised in reading between the broad lines and courteous generalizations of diplomatic compositions. The despatch was first known to the English public here through the translations in the French and Italian press, and it was only a day or two ago that it appeared in its original form in the English organ. It has been remarked that, lengthy and tolerably precise as it is, there is no allusion to the concert with France till the last two clauses are reached, when the subject appears to be dragged in just because it would be indecent to leave it out. On the other hand, one main argument used throughout by Lord Granville is that all further foreign intervention is to be avoided, and that the best means of obviating temptations to it, or the necessity for it, is to support the existing connection between Egypt and Turkey. Lord Granville further expresses himself as wholly opposed to the extension of the jurisdiction of the mixed tribunals to business in which only natives of the country are concerned. On the other hand, he urges the development of native tribunals and the reorganization of native procedure generally. All this is adverse to the direction in which French influence has been habitually exerted. The following passage of the despatch deserves to be quoted in full:

"The only circumstance which could force us to depart from the course of conduct which I have above indicated would be the occurrence in Egypt of a state of anarchy. We look to the Khedive and to Sherif Pasha and to the good sense of the Egyptian people to prevent such a catastrophe; and they, on their part, may rest assured that so long as Egypt continues in the path of tranquil and legitimate progress, it will be the earnest desire of Her Majesty's Government to contribute to so happy a result."

The organization of the native tribunals, so far as outward form goes, is proceeding rapidly, and the decree of the Khedive having reference to it was signed on the 17th of September. Any one who reads the official journal, the *Moniteur Égyptien*, will learn that the Egyptian Government has this at least in common with the suzerain authority, the Turkish Government, that it has considerable literary power at its disposal for the purpose of drawing up state documents and giving a plausible appearance of elaborateness and prevision, and indeed of reasonable equity—on paper. According to this decree, there are to be tribunals "of first instance" in Cairo, Alexandria, and the chief towns of all the provinces of the country, as well as in those of the Sudan. There are to be two Courts of Appeal, at Cairo and Alexandria respectively, as well as a "Court of Revision" at Cairo. The Courts of First Instance are to be presided over by five judges each, the Courts of Appeal by eight judges each, and the Court of Revision by ten judges. The policy of throwing the weight of British influence into the organization of these tribunals, and against the extension of the jurisdiction of the international tribunals, is much criticised here, and, I am myself disposed to think, rightly. Of course, to an English or an American eye, looking superficially, nothing seems more plausible or attractive than the process of calling into life local and indigenous institutions. But what if the seed of life is not there, or if the salt has lost its savor? Surely, to keep up, as the Turkish Empire has been doing, again and again, time out of mind, the appearance of a vitality which it has not, is a sort of second death, because it puts off, by concealing the real facts, the acquisition of a true life. I fear that the Egyptian Administration has been too long corrupted by Turkish dishonesty and by Mohammedan inertness to revive at the mere call of a Khedivial decree and the patronage of a British Minister. The best hope for the administration of justice throughout Egypt would be found in associating it at as many points as possible with the best procedure and the highest judicial morality to be found in England, America, and Europe. These are not unfairly, although as yet inadequately, represented together in the mixed international tribunals, and nowhere else in Egypt.

With respect to the prospects for the next few months in Egypt, it is thought things are likely for the present to remain as they are. Europeans in high office in Cairo and in Alexandria are making arrangements for their families to join them, and every ship brings fresh accessions of the best kind to Egyptian winter society. If the interview, reported at great length in the European press here, between the American Consul-General here and Ourabi Bey is a genuine record of the strange conversation it describes, it would seem that this notorious chief of the modern Prætorian Guard has retired into himself for a time, to meditate on the novel doctrines with which the Consul-General has imbued him, as to universal and compulsory education being the sole ground of hope for Egypt, as it was for America. A.

Correspondence.

REASONABLE DOUBT AS TO INSANITY.

TO THE EDITOR OF THE NATION:

SIR: In the article upon "The Guiteau Case," in your last number, you say: "Supposing at the end of the trial the jury, as reasonable men, entertained a doubt whether at the time of the killing Guiteau was or was not sane, would he be entitled to an acquittal? As to this the law is decidedly in the prisoner's favor. A reasonable doubt as to insanity is a reasonable doubt as to guilt."

Such is not the law in England, or in the majority of our States. The prisoner is required to prove his insanity to the satisfaction of the jury, either "by a preponderance of the evidence" or "beyond a reasonable doubt."

In New Hampshire, Indiana, Illinois, and Alabama the law is as you have stated it, and Judge Blodgett, of the Illinois district, charged the jury to the same effect; but in general the Federal Courts have laid down the English rule. Judge Curtis, in the Massachusetts district, and Judge Clifford, in the Maine district, have ruled that the prisoner's insanity must be clearly proved to the satisfaction of the jury.

The current of authority, therefore, appears to be against the rule laid down in the *Nation*.

Yours respectfully, R. S. H.

PHILADELPHIA, Nov. 28, 1881.

[In saying that "the law" was in the prisoner's favor, we had in mind not so much the numerical weight of authority, which is often misleading, as the principles of criminal justice which underlie the cases. Our correspondent greatly understates the weight of authority in favor of the proposition which he quotes. The States in which the courts have held that a reasonable doubt as to the prisoner's sanity entitles him to an acquittal are New Hampshire, Nebraska, Tennessee, Illinois, Indiana, Kansas, Kentucky, Michigan, New York, and North Carolina (there seems to be some question as to Alabama). A full list is given in Grinnell's 'Points of Law for Lawyers and General Readers Suggested by Guiteau's Case.' Wherever the matter is *res nova*, the rule that the jury is bound to acquit if they have a doubt as to the sanity of the prisoner, is likely to commend itself to any court which has to pass upon the question. The prosecution must make out its case, and the burden of showing guilt is on the State throughout. The guilt depends upon the act and the intent; and if the evidence as

a whole leaves the jury in doubt as to a criminal intent, there is a failure of proof. The prisoner is undoubtedly entitled to a charge on the subject of "reasonable doubt" with regard to his guilt; but suppose he admits the killing, and alleges insanity, does he lose this right, and does the State suddenly get the benefit of it? This can hardly be. The principles which govern criminal trials seem to us decidedly in favor of the rule that a reasonable doubt as to insanity is a reasonable doubt as to guilt.—Ed. Nation.]

THE FEES OF DISTRICT ATTORNEYS.

To the Editor of The Nation:

Sir: In your reference to the annual report of the Attorney-General (*Nation*, No. 858, page 441), you justly criticise the abuse of their office often made by U. S. District Attorneys. Allow me to note another method of abuse which has come under my observation. At every term of a U. S. District Court there appears on the docket a large number of cases against persons charged with violations of the revenue laws. In nearly every case the defendant finds it cheaper to pay the penalty of the law than to contest the case, the offenders generally being of such a class as not to be morally affected by the stigma of a conviction. In such a case two courses are open to him: he may plead guilty or he may consent to a verdict. Thereupon it is customary for the District Attorney to recommend such penalty as he may adjudge best, and the Court enters judgment for that amount without further examination. The District Attorney's fees are regulated by the number of trials and convictions, and it is to his interest, therefore, to have the defendant consent to a verdict rather than plead guilty. He takes a peculiar mode to advance his interests. When a defendant pleads guilty, he recommends a fine of $100; but if he consents to a verdict, he recommends a fine of $10 and costs, the kind-hearted and "benevolent" District Attorney placing the fine very low because the defendant is penitent and sorry for the offence, and because his own fees are taxed with the costs. Here is an abuse which might be cured by paying district attorneys a salary, and which would lead them to recommend a just fine in all cases. W.

December 12, 1881.

OUR SURPLUS REVENUE.

To the Editor of The Nation:

Sir: In many respects our national finances are now in a situation very similar to that of 1828–1832. Nearly two decades of high-tariff rates, during a portion of which a system of internal revenue was in operation, had brought the country to a time when the extinguishment of its war debt was a matter of the near future, while the revenues which had been mostly absorbed in its liquidation were constantly increasing. The same problem presented itself then as now: "What shall be done with the surplus revenue?" Two answers were given to it. One party said, "Reduce the revenue"; the other, "Apply the surplus to internal improvements." Those favoring the reduction of the revenue were divided into two factions: the first favored reducing the revenue by the common-sense method of diminishing the taxes; the second wished to reduce it by increasing the taxes—*i.e.*, by raising the tariff rates to such a height as to amount to virtual prohibition of importation, when of course all revenue would cease. The same tendencies are discernible at the present time. Several of the delegates to the recent Tariff Convention at Chicago insisted that an increase in the tariff rates would be necessary to prevent that bugbear of all good citizens, a plethoric treasury. The Burnside Bill before the last Congress provided for the distribution of the surplus revenue among the States for the purpose of promoting the cause of education. The revenue reformers favor a reduction of the revenue by abolishing our protective tariff in favor of a revenue tariff adjusted to provide the necessary income.

The present problem could not probably be solved, as the former one was, by a compromise tariff and a commercial crisis, even if it were desirable it should be so solved. No one who has taken any pains to acquaint himself with the real reasons which impel Western farmers to support a protective tariff, can hope that any change can be produced in their views within any very short period of time. Even the farm-hand of Illinois votes and talks for a protective tariff because a revenue tariff, by allowing great manufacturing interests to perish, would let loose a vast horde of Eastern factory operatives, who would then come pouring into the West, and by their competition lower the wages of farm laborers! With such a man, the argument that he has to pay more for clothes, etc., in order to keep the operative at work, has no effect, for he regards this extra amount as the price he has to pay to prevent a ruinous competition in his own calling. I think that free-traders underrate very greatly the public sentiment in favor of protection. The West is no longer the free-trade stronghold it once was, and we must take this fact into consideration in laying our plans for the future. It is still in favor of free trade, or rather of a revenue tariff, if the question could be presented to it free from complication with other questions; but the protectionists will take good care that this shall never be done. We conclude, then, that the tariff men have the inside track for the present, and if any reduction be made in taxation, it will probably be so made as not to interfere essentially with the "protective" character of the tariff. E. J. J.

Normal, Ill., Dec. 5, 1881.

FREE SHIPS AND FREE TRADE.

To the Editor of The Nation:

Sir:—

"We contend not only that ships should be relieved of local taxation, but that foreign articles which enter into the construction of a ship should be free of duty."

This seems to be one of the few points wherein the *Nation* and my humble self agree with the tariff laws of the United States. Section 2513 of the Revised Statutes reads as follows:

"All lumber, timber, hemp, manila, and iron and steel rods, bars, spikes, nails, and bolts, and copper and composition metal which may be necessary for the construction and equipment of vessels built in the United States for the purpose of being employed in the foreign trade, including the trade between the Atlantic and Pacific ports of the United States, and finished after the 6th day of June, 1872, may be imported in bond, under such regulations as the Secretary of the Treasury may prescribe; and upon proof that such materials have been used for such purpose, no duties shall be paid thereon. But vessels receiving the benefit of this section shall not be allowed to engage in the coastwise trade of the United States more than two months in any one year, except upon the payment to the United States of the duties on which a rebate is herein allowed."

Now, it is evident that there is something lacking in our ship-builders that they do not avail themselves more freely of the liberality expressed in the above act. They are certainly patriotic gentlemen, and are eager to give "remunerative employment to American labor." Is it because our merchants do not possess that eagerness to the same degree when a question of profit and loss is concerned? It seems they refuse to buy ships from our ship-builders while their shipping can be done by foreigners at much less cost to them than in bottoms waving the American flag. Unless we revert to the old system of government, raising taxes by roasting and tooth-pulling, I can see no means by which our shippers can be brought to engage in the carrying-trade of the world except by giving them all the elbow-room they need and which the foreigner has. Unless we can buy and sell wherever we please, and consular charges and other iniquities are abolished, I doubt whether even free ships will make the Stars and Stripes wave from many mastheads of the steam-ferries of the ocean.

Respectfully yours, J. Schoenhof.

New York, Dec. 16, 1881.

ENGLISH APPROPRIATION OF AN AMERICAN BOOK.

To the Editor of The Nation:

Sir: Much has been said in time past by our cousins across the water about American literary theft, but it is doubtful if a more glaring disregard of the eighth commandment was ever exhibited by any cisatlantic writer than that shown in the wholesale appropriation by an English editor of Mr. John D. Champlin, jr.'s 'Young Folks' Cyclopædia of Common Things.' This little work, which was commended by the *Nation* on its publication in this country two years ago, has just appeared in London, under the imprint of Kegan Paul, Trench & Co., with the following title: 'The Little Cyclopædia of Common Things, edited by Rev. Sir George W. Cox, Bart., M.A.' There is not the remotest reference to the American author; and though it is stated in the preface that the substance may be found in an "American edition," care is taken to lead the reader to suppose that the changes have been so "considerable, and in some cases important," as to make almost a new work of it.

A thorough comparison of the two books shows that the *considerable* changes amount to the omission of a few titles essentially American, such as Bluefish, Cent, Scup, and Yellow Bird, and the addition of a few (essentially English?), almost to be counted on one's fingers. Among the latter are those very common "common things," Aryan Languages, Augurs (Roman soothsayers), and Auto da Fé. Among the changes probably considered *important* are the careful erasure of the name of Washington from the cut of the Washington printing-press; the ignoring of the name of Hoe in connection with the Web Perfecting Printing-Press (though, by some strange oversight of the editor, the words "R. Hoe & Co., New York," have not been scratched out of the electrotype); the suppression of the account of the American trotting-horse, though sufficient space has been found for that peculiar American implement, the terror of all British tourists, the bowie-knife; and the substitution of the Armstrong for the Rodman gun, though, by another serious editorial oversight, the title "Rodman Gun" is left as in the original, and made to do duty under the Armstrong picture. Indeed, with a few exceptions, of which the above are samples, the work is a reprint, almost word for word, of the American book. As an example of the Rev. Sir George's capacity for the instruction of youth, the following sentence is submitted, taken from his article on the common thing, Aryan Languages:

"They all belong to the inflexional stage of languages, which admit of phonetic corruption, both in the principal root and in the terminations; and they are therefore called organic or amalgamating languages, to distinguish them from the agglutinative languages of the Tura-

nian family of speech, which allow phonetic corruption only in the secondary elements—that is, in the suffixes and terminations—while the main root remains intact, as the needs of a nomadic population constantly changing their abode would require."

If this is a fair specimen of the educational food prepared at home for the average British youth of ten, one need not wonder that it should be found necessary to appropriate American books; but common courtesy would suggest at least an acknowledgment of the debt.

FAIR PLAY.

Notes.

MR. GEORGE WILLIS COOKE, whose work on Mr. Emerson we recently noticed, is engaged upon "a fuller historic account of the *Dial*, with biographic sketches of those of its contributors who are otherwise unknown to the public," as complete a list as possible of writers and their several contributions, and an index. Any person capable of furnishing assistance in any of these particulars may address Mr. Cooke, at West Dedham, Mass.——Charles Scribner's Sons will publish an 'Historical Outline of the English Constitution, for Beginners,' by David Watson Rannie.——E. & J. B. Young & Co. will shortly have ready the 'Letters, Literary and Theological, of the late Bishop Thirlwall,' in two vols., the second having been edited by the late Dean Stanley.——A. C. Armstrong & Son have put their imprint on the Rev. John Stoughton's 'Religion in England, from the Opening of the Long Parliament to the End of the Eighteenth Century,' an elaborate work in six volumes, devoted respectively to the Church of the Civil War, of the Commonwealth, of the Restoration (2 vols.), of the Revolution, and of the Georgian Era. Among the Nonconformists Dr. Stoughton represents perhaps the best type of orthodoxy, being learned, temperate, and cultivated as well as liberal, and greatly respected outside as well as inside his communion. His History, like his character, has received very striking testimonials of esteem from liberal Churchmen.——Harper & Bros. have begun the publication of a 'Harper's *Young People* Series,' consisting of stories and other serials that have already appeared in their juvenile weekly.——Robert Clarke & Co., Cincinnati, announce for January, 1882, the 'St. Clair Papers,' edited by Wm. Henry Smith, a work in two volumes, based on the papers formerly in possession of the descendants of Major-General Arthur St. Clair, and which were purchased by the State of Ohio. The correspondence of Washington and the chief military leaders of the Revolution embraced in them has never been published. The second volume is entirely devoted to the affairs of the Northwestern Territory, and covers the formation and adoption of the Ordinance of 1787. New light is shed even on such events as the campaign on the Delaware in 1776-77, and the evacuation of Ticonderoga in the latter year.——J. B. Lippincott & Co. have added to their invaluable 'Dictionary of Biography and Mythology' a necrological table of some 2,000 names of persons noticed who have died since the publication of the work. It would be well to offer this for sale separately, for the benefit of owners of earlier editions. The same firm have in press 'Memoirs of Old Friends,' being extracts from the journals and letters of Caroline Fox, of Penjerrick, Cornwall, 1835-71, edited by Horace N. Pym; and 'Studies in Mediæval History,' by Charles J. Stillé.——Something of the astronomer's joy "when a new planet swims into his ken" was that of Dr. Henry M. Dexter when, having come upon an incidental allusion to a lost tract by Roger Williams, he after many years found the tract in the British Museum overlooked and unrecorded in a bound volume with others. He copied it exactly, and now reprints it, with all but facsimile fidelity, as No. 14 of the Rhode Island Historical Tracts (Providence: S. S. Rider). This 'Christenings Make not Christians' is an argument against wholesale conversion of the heathen, originally published in 1645-6. Some inedited letters of Roger Williams's, cogently setting forth his uncomfortable relations with Wm. Harris, are added.——Mr. Edward A. Freeman's two lectures in Providence last week, on South-Eastern Europe, Past and Present, enabled the librarians of the Brown University, Public, and Athenæum libraries to follow the example of the Peabody Institute by getting out a list of supplementary reading, with references to works to be found in their respective collections. It is therefore reasonable to hope that this useful practice will take root among us, and perhaps end by furnishing the public a test of lectures worth listening to.——A modest pamphlet, quite in keeping with the character of its subject, has just been published in Charleston, S. C., by the family of the late Francis Kinloch Huger, giving an account (from the family tradition) of his famous attempt in connection with J. E. Bollman to rescue Lafayette from the prison of Olmütz. Readers of Dr. Kapp's Life of Bollman (reviewed in No. 779 of the *Nation*) will be interested in this brochure, which lacks, however, any publisher's imprint.——A few loiterers among the children's books may hastily be dismissed here. 'Sugar and Spice, and All that's Nice' (Strahan & Co.) is a pretty successful imitation of Kate Greenaway's style of illustration, and if the metre of the verses were equal to the conceits, the total result would be unimpeachable. 'At Home' (Marcus Ward & Co.) belongs in the same class, but is more formal. Mrs. Molesworth's 'Adventures of Herr Baby' (Macmillan) may safely be taken on trust. Walter Crane furnishes the pictures. 'Milly and Olly' (Macmillan), by Mrs. T. H. Ward, attracts by reason of Mrs. Alma-Tadema's name on the title-page as artist; but the young lady crossing the stepping-stones is the most striking of her designs. 'Peter Parley's Annual for 1882' (Cassell) is composed of stories by each of the personages in the counting-out formula—"Tinker, tailor, sailor, rich man, poor man, ploughboy, thief."——A correspondent, who does not think it a "striking fact" that the late Professor Benjamin Peirce had at least twenty-five ancestors, heads of families, known to have settled in New England before 1663 and mostly before 1640, sends us proof of a still more striking fact. He can boast thirty-eight ancestors, heads of families, who settled in New England before 1660, and were all immigrants, to say nothing of several who were natives.

— The Wisconsin Academy of Sciences, Arts, and Letters, has lately published a valuable article by W. F. Allen, Professor of History and Latin in the University of Wisconsin, on "The English Cottagers of the Middle Ages," showing that this class of tenants in the thirteenth century was really made up of various groups, some of free and some of servile origin. The former usually lived in villes, among customary and freehold tenants, while the servile cottagers lived on their lord's demesne land in little hamlets, like the negro quarters of a Southern plantation. The article is a continuation of Prof. Allen's earlier studies upon the origin of freeholders and customary tenants, in which he showed that the latter class were the true historical representatives of the primitive village community, and that freeholders were of feudal origin, thus controverting the views of Sir Henry Maine, who maintains in his work on 'Village Communities' (p. 137) that freeholders of tenemental lands correspond to the free heads of households in the ancient Teutonic village. Another paper by Professor Allen, published in the transactions of the American Philological Association, 1880, is a discussion of the military operations of the Romans in the battle of Mons Graupius, by which the conquest of northern Britain was completed by Agricola as described in his life by Tacitus (chapters 35-37.) The battle occurred not far from the Frith of Forth, and not on the Grampian Hills, which are fifty miles to the northward. It is curious that this latter region, where Norval's father fed his flocks, should have owed its name to a false reading of Tacitus, *ad montem Grampium*, for *Graupium*. The Grampian Hills were not so called before the fifteenth century, but ever since that unwarrantable baptism geographers have been looking in the above mountainous region in general for a particular "Mons Grampius," as though Agricola could have gained a victory in the Highlands, where he would certainly have found a Killiecrankie.

—The second volume of the 'Calendar of Virginia State Papers and other Manuscripts, preserved in the Capitol at Richmond,' has been recently published under the editorial supervision of Dr. William P. Palmer, aided by Sherwin McRae, the State Librarian. The present volume (729 small quarto pages) embraces the archives of Virginia from April 1, 1781, to December 31, 1781, which was practically the closing period of the American Revolution. This timely publication, accompanying the Yorktown centenary, is a worthy and enduring State monument. The work of arranging these archives was begun by Dr. Palmer, by authority of the General Assembly of Virginia, as far back as 1872, and the first volume of his collections, from 1652 to March 31, 1781, was published in 1875, with a scholarly introduction explaining the character of the published documents and their bearing upon the history of Virginia. Dr. Palmer's manuscript collections extend to May 31, 1791. His health has been the price of his assiduity. It is interesting to note the effect of example in the publication of original records. One State or municipality follows the lead of another. The Calendar of Virginia State Papers was suggested by the English Calendar of State Papers. Probably all similar undertakings in the United States were, directly or indirectly, the outgrowth of English precedent. The English Record Commission was quickened into activity by the example of the 'Monumenta Germaniæ Historica,' edited by G. H. Pertz and a society of German scholars. The origin of this truly monumental work, upon which historians are still building, and which, like the Cologne Cathedral, unites mediæval and modern Germany, is due to that old knight of the German empire, and liberator of Prussia, the Freiherr vom Stein, who in his retirement at Nassau undertook to give lectures on ancient German history to his daughter and a little class of girls. Experiencing the difficulty of furnishing adequate information to his bright young pupils, the venerable statesman began to realize modern Germany's need of a national collection of historical sources, such as Muratori had made for Italy and such as Mabillon and the Benedictines had made for France. With these concrete examples in mind, Vom Stein bestirred himself and put into execution a plan which had been proposed by Leibnitz long before his contemporary Muratori had begun his Italian collection. Leibnitz, although unable to carry out his scheme of national publication, actually edited (1707-1711) the 'Scriptores Rerum Brunsvicensium,' from which the 'Origines Guelficæ' afterward sprang—sources to which England and Germany now turn

as to a common fountain. But Leibnitz undoubtedly derived his larger plan from earlier compilations of a more or less national character, like André Duchesne's 'Historiæ Francorum Scriptores' (begun in 1636), and Mabillon's 'Acta Sanctorum Ordinis Sancti Benedicti' (even the saints were treated as national), the 'Magdeburg Centuries,' representing Protestant Germany, and Baronius's 'Annales Ecclesiastici,' representing Catholic Italy. The germs of all such collections, however, lay deeper yet, in the zeal of the Italian humanists, like Poggio and Pope Pius II., for collecting manuscripts, and in the fondness of schoolmen, like St. Thomas Aquinas, for gathering citations and amassing encyclopedic wisdom.

—The example of old England and of her Old Dominion has now made itself felt in the State of Maryland. Stimulated by the sight of the 'Calendar of Virginia State Papers,' and influenced by the words of Drs. Edward A. Freeman and James Bryce, representatives in historical literature the one of the 'Eastern Empire,' the other of the 'Holy Roman Empire,' the Maryland Historical Society has addressed a memorial to the General Assembly of the State, craving the transfer of the Colonial and Revolutionary archives from Annapolis to Baltimore, and an annual appropriation to the Society for the purpose of a systematic publication of State records. The memorial is supported by the leading men of Baltimore, and will probably receive favorable attention from the State of Maryland. Appended to this memorial are the written opinions of Messrs. Freeman and Bryce in regard to the historical importance of such a publication as is now proposed. Mr. Freeman, after emphasizing the special value of the Maryland records, some of which he appears to have seen, concludes as follows:

"During the short time that I have been in America, I have been more and more impressed by the deep interest of the early history of all these lands, first as provinces, then as independent States. Each State has in the most marked way its own character, and gives some special kind of instruction in comparative political history. The local annals of Maryland or of any other State are something more than mere local history, something more than part of the history of the United States or of the whole English-speaking people. They are really contributions to the general science of politics—no less than the lessons which we should have had if Aristotle's comments on the kindred commonwealths of old Greece had been spared to us."

—The last catalogue of Smith College, for young women (Official Circular No. 8, Northampton, Mass., October, 1881), shows a rapidity of development in this institution comparable only to the growth of a new city in the far West. The college, not founded in the interest of any religious denomination, and entirely undenominational in its management and instruction, was incorporated by the State with full power to grant such honors, degrees, and diplomas as are granted by any university or college in the United States. In appearance, the course of instruction does not suffer by comparison with that of any of the New England colleges; and, while it is necessary to specify the minimum of work which will be accepted as satisfactory, experience has taught the Faculty the greater necessity of specifying the maximum limit beyond which students will not be allowed to assume extra work—a condition of things which, in such institutions generally, does not unduly tax the interference-prerogatives of collegiate officers. Of a total of 265 students, there are resident graduates, 1; pupils in the school of music, 20; in the school of art, 7; and the rapid increase of the number of students in the college proper is evident from the class distribution of the remainder—seniors, 42; juniors, 53; second class, 60; first class, 82. The State representation shows a wide distribution throughout the Union, but almost exactly one-half are from Massachusetts. The college Faculty proper numbers 22 instructors.——The catalogue of Amherst College, recently issued, exhibits a number of changes in the Faculty and the courses of instruction. The Stone Professorship of Biology appears for the first time; the chair is, however, not yet filled, the work of that department being at present performed by Mr. Tyler, a son of the Senior Professor of Greek. Dr. Henshaw, formerly of Easthampton, appears as lecturer on Natural Philosophy. Mr. Elwell, late a pupil of Professor Whitney, will give a course in Sanskrit, elective during the two latter terms of the senior year. Mr. Garman assists the President in Mental and Moral Philosophy. Mr. Todd, formerly of the Nautical Almanac Office, Washington, has charge of the Observatory and the department of Astronomy. A new elective in Anglo-Saxon is available during two terms of the Sophomore year. Of the 343 students of this college, also, nearly one-half are from Massachusetts. The Class Gymnastic Prize, formerly given by Mr. Washburn, of New York, is now maintained by Mr. Gilbert, of Cincinnati, and new prizes in heavy gymnastics have been established by Mr. Ladd, of Oregon. The Triennial Catalogue of the graduates of the college is, following Harvard's example, to be replaced by a quinquennial edition—the first issue falling in the year 1883.

—In the *Medical News and Abstract* for November, Dr. Wm. Hunt, the Senior Surgeon to the Pennsylvania Hospital, carefully criticises President Garfield's case, in response to the direct request of medical friends. After making the point that during its progress the case was "most uncourteously, if not unprofessionally, appropriated, through the newspapers, by some surgeons as their own," and that it belonged to them only as to all other citizens not in possession of all the facts, but that since its termination and the official publication of the autopsy it is a fair subject for comment, he first quotes two paragraphs from Dr. Hamilton's 'Military Surgery,' published in 1865. These most clearly describe the nature and the consequence of just such an injury as the President's, including the distinct statement that "it is not probable that we shall be able to diagnosticate such a case clearly during the life of a patient, and if we were able to do so we do not see what benefit could be derived from any surgical operation." He then suggests that the deep significance of the nervous symptoms manifested immediately after the shooting was lost sight of too early in the case. These impressed him, as they probably did nine out of ten medical men, with the primary conviction that the spine was wounded. But when competent examiners having the case before them believed the liver penetrated, the absentees yielded to their judgment, and the consulting surgeons, in Dr. Hunt's opinion, did well in not reopening the wound. Had the liver been involved, nothing but evil could have ensued. To follow the course of the ball at the time Drs. Agnew and Hamilton first saw the case would have been practically impossible from the swelling of the tissues, and in the light of the autopsy it is explicable how the attending surgeons were primarily deceived. It requires familiarity with anatomy to understand the reasons in detail, but, as Dr. Hunt remarks, "the ball entered at a place which, if it had had consciousness and an intent to deceive, could not have been better selected in the whole body." The probe and finger doubtless did touch the liver or perhaps the kidney, and that without making a new track, but, owing to the anatomical peculiarity referred to, "the wound was one to deceive the very elect." The opening afterward made for the first abscess did drain the true as well as the mistaken sinus, and the spine was then examined, but its wound was "beyond the fingers, and a wise caution forbade the use of instruments." Dr. Hamilton's prophetic remarks are completely realized. The abscess found after death—that is, the one beyond the spine—was entirely shut off from the wound of entrance, and Dr. Hunt observes: "No method of diagnosis occurs to me by which its existence could have been determined during life," unless it grew large enough to bulge the superficial walls. In the light of the autopsy, physiology explains every symptom, but the theory during life explains nothing. But had the bullet been certainly made out, to have removed it would not have cured the damage. The bullet *per se* was comparatively harmless; it was its course through the body that wrought the mischief. Dr. Hunt adds: "It may be a mercy that an exact diagnosis was not made. The temptation to do something more than was done, if it had been made, would have been very great. Outside and inconsiderate pressure would have been clamorous. Whether it would have moved the steady heads in charge, I do not know; but if it had, I am confident the President would have been ready for his grave on the day of the operation." As to the essential character of the wound, "it is but a piece of special pleading to say it was not mortal." There are but two or three injuries that are directly fatal. In this case death followed the smallest serious injury, considering the extent of tissue involved. It was the aneurism of the splenic artery, but it was one that in its very nature could only go on to a fatal issue. Medical men may profitably study Dr. Hunt's complete paper, as well as another by him in the same issue on spinal shock, evidently inspired by the same catastrophe. Laymen may find in this epitome some of the bewildering fog lightened.

—Mr. Lewis H. Morgan, whose death at Rochester, N. Y., occurred on Saturday, after a brief illness following a long period of delicate health, was one of the most laborious, acute, and original of American scientists. With reference to our pre-Columbian antiquities he might for some time past have been called the Nestor of Indian ethnologists. A native of western New York, he early became interested in the neighboring remnant of the once mighty Six Nations, and gained a thorough insight into the political and military constitution of the confederacy, its manners and customs, and above all its curious system of tribal intermarriages. Together with some kindred inquiring spirits, he instituted, at the age of twenty-five, an Order or "New Confederacy" of the Iroquois—a sort of antiquarian society, having as a subsidiary aim the promotion of a kindlier feeling toward the red man; and before its "councils" in the years 1844, 5, and 6, he read a number of papers on the Iroquois, which, under the *nom de plume* of "Skenandoah," were published, as letters addressed to Albert Gallatin, in Cotton's *American Quarterly Review*, in 1847. From this source they were reprinted by Neville B. Craig, of Pittsburgh, in his monthly *Olden Time* (1848), and five years ago once more saw the light in Robert Clarke & Co.'s reprint of the latter periodical.

"These letters," wrote the author to a friend, in 1876, "contained in fact the first exposition of the social and governmental system of the Iroquois. Modesty, I suppose, kept me from signing my own name. In 1851 I published the 'League of the Iroquois,' which contains all the letters contain, uses a good deal of the same language and the same quotations: and I do not remember that I avowed these letters in the 'League,' as I ought to have done, to save myself from the charge of plagiarism."

This work at once put Mr. Morgan in the front rank of Indian authorities. A professional visit

to Lake Superior led him to observe an animal closely associated with the aborigines, and toward the close of 1867 he produced the 'American Beaver and his Works,' an exhaustive but highly readable monograph, in which, to use the words of the late Jeffries Wyman (*Nation*, February 27, 1868), Mr. Morgan, "with a zeal and patience worthy of Réaumur, the Hubers, or of Darwin, re-examined the whole subject and largely increased our knowledge," and which "justly entitled him to an honorable place in the higher ranks of original observers." The year following, in an article on the "Seven Cities of Cibola," in the *North American Review* (April, 1869), he struck a blow at the whole fabric of the theory of Indian civilization handed down by the Spaniards and embalmed by Prescott, and laid the foundations of the prevailing conception of the meaning of that communal architecture which was for centuries regarded as royal and palatial. It is proper to remark here that Mr. A. F. Bandelier, who, by the way, has lately been studying the same historical site of the Seven Cities, was a disciple of Mr. Morgan's, and has indeed done honor to his influence and warm friendship.

— In 1873 appeared among the Smithsonian Institution's Contributions to Science a quarto volume of some 700 pages, entitled 'Systems of Consanguinity and Affinity of the Human Family.' This was the first fruit of Mr. Morgan's discovery, while on his excursion to Lake Superior, that the system of marriage and relationship in the Six Nations was that of the American Indians generally, and his subsequent reflection that he had encountered a fundamental fact in the development of human society. Himself pursuing his investigations in person among the Western Indians, he sent out schedules of questions to missionaries and scholars in all parts of the globe, and constructed at last his masterly exhibition of unsuspected identity between the primitive institutions (of kinship) of the American Indians and the great Turanian and Malayan families, establishing also, beside their Classificatory system, the Descriptive, which we have derived from our Aryan forefathers. He afterward resumed the whole question in a popular manner in his 'Ancient Society, or Researches in the Line of Human Progress from Savagery through Barbarism into Civilization' (1877), which is unquestionably the most comprehensive study of the *gens* ever made, and one of the most important documents in support of the development theory. The 'League of the Iroquois,' the 'Systems of Consanguinity,' the 'Ancient Society,' and the 'American Beaver' are Mr. Morgan's *monumentum ære perennius*. His last work was among the pueblos of New Mexico, from the study of which he concluded that the Mound-builders were village Indians of New Mexican origin, and that the mounds were the platforms for their long wooden communal houses. These conclusions were published in the first report of the Archæological Institute of America (1880). On his deathbed he received his very latest printed work, 'Houses and House Life of the American Aborigines,' published by the Bureau of Ethnology of the Smithsonian Institution. Mr. Morgan's personal qualities had a peculiar charm, in which gentleness and unaffectedness were conspicuous. He was one of a group of learned and gifted men whom the University of Rochester naturally drew about it, and whose periodical meetings and constant coöperation maintained in that city an uncommon intellectual atmosphere. He will be greatly lamented by his associates and by his correspondents all over the world, and the *Nation* can after all pay but a feeble tribute to one who was its steadfast friend through good report and evil report, and a willing contributor whenever his strength and leisure permitted.

—In our issue of October 13 we gave a synopsis of Prof. Pettenkofer's address before the fifty-fourth assembly of German Naturalists and Physicians at Salzburg, on "The Soil and its Relations to Health." The *Deutsche Rundschau* for November publishes the address in full, and, in view of the peculiar interest lent to Prof. Pettenkofer's theories by the mysterious prevalence of "malarial" diseases in this country, we may be permitted to recur to the subject. Prof. Pettenkofer lays great stress on the necessity of consulting the condition of the soil in the erection of buildings, and advises the Government to give heed to the suggestions of Dr. Port, a prominent army surgeon, in regard to the construction of barracks and camps. He quotes Dr. Port's remark that, as far as hygienic requirements are concerned, our palaces are far behind the earliest pile-dwellings and the primitive mud-huts still to be found among the poor peasants of Germany, apropos of which the account given by Prof. Hirsch of a recent outbreak of cholera on an estate near Dantzic is interesting. Besides the proprietor's residence, there were nine buildings on the grounds—seven of them well-built modern houses, kept perfectly clean, and provided with dry, airy cellars; the remaining two, situated in the midst of the others, being really mud-huts without cellars. Yet in each of the seven houses cases of cholera occurred, resulting in the death of seventeen persons out of a total population of one hundred and fifty, while in the two old dwellings not a single one was attacked. Dr. Port, evidently a thoroughgoing disciple of Prof. Pettenkofer, attributes this immunity solely to the mud flooring, which completely shut out the noxious influences of the soil. Few numbers of the *Rundschau* appear without some article in the nature of a biographical memoir. The issue before us contains two: "Antonio Panizzi," by Karl Hillebrand, and "Friedrich Arnold Brockhaus," by Friedrich Kapp, both writers being among the most frequent contributors to the *Rundschau*. Prof. Hillebrand never treats a subject without impressing his readers with his thorough knowledge of the literature and history of many countries; yet we should have expected a more felicitous treatment of so rich a theme as Panizzi's life must have been to him. Dr. Kapp's review of the life of the founder of the great Leipzig publishing-house, as written by his grandson, reveals in a striking way the thorny path of the originator of the 'Conversations-Lexikon,' whose struggles with the censors of the days of the Holy Alliance may well raise an incredulous smile on the lips of modern cyclopædia publishers. The essay is to be concluded in the following number. Of the other articles, we may mention, besides a feeling tribute to the memory of President Garfield by Dr. Kapp, the concluding instalment of Ferdinand Hiller's "Besuche im Jenseits" (Visits in the Other World)—a light species of "Imaginary Conversations," with far less ability than Landor's, and much greater obtrusion of the writer's individuality. The two novels are unexpectedly good in opposite ways. "Das Brigittchen von Trogen," by Conrad Ferdinand Meyer—a writer whose striking poem, "Hutten's Letzte Tage" deserves far more general appreciation than it has received—is entertaining in spite of its formidable array of mediæval lore; while Marie von Ebner-Eschenbach's "Die Poesie des Unbewussten" (The Poetry of the Unconscious), a novelette in postal cards, belongs to the *genre* of bright nothings in which the German hand so rarely succeeds.

—Among the many new Reviews recently started there is hardly another which has so good a *raison d'être* as the *Revue de l'Histoire des Religions*, begun last year at Paris, under the editorship of M. Maurice Vernes (E. Leroux, publisher). The subject to which it is devoted—the scientific as distinguished from the theological study of men's religious beliefs and practices—is one of prominent interest before the public mind at present, and it has hardly had an organ of its own in any country. M. Vernes counts among his contributors not only the leading French names, but also the Dutch, the well-known Prof. Tiele, of Leyden, being one of his chief collaborators. The state of feeling still existing between France and Germany apparently forbids his drawing any help from the latter land of scholars. The volumes already issued are full of valuable matter — elaborate articles, criticisms, notices; and bulletins, intended to be continued at regular intervals, of the progress of research in the various main departments of the field. The *Revue* is issued every other month, in parts of about 150 pages each, and the foreign subscription price is 30 francs a year.

—In the last number of the *Revue Historique* (Sept.–Oct.) is an article by M. Paul Guiraud proposing a new theory as to the reform of the centuriate comitia of ancient Rome. The generally accepted view (that of Pantagathus) assumes that each of the thirty-five tribes contained ten centuries, divided equally between the *seniores* and *juniores;* the new theory maintains that this division applied only to the first class, and that the lower classes were divided essentially as before. We cannot consider the point made out. M. Guiraud brings up really only two citations to prove it. One is the corrupt passage in Cicero, *de Rep.*, ii., 22, which appears to prove that the first class contained only seventy centuries, while the whole number of the centuries was 193, and which he refers to the time of Cicero (*Nunc videtis . . . esse*, etc.). But the whole context shows that Cicero is speaking of the early period, so some other explanation must be found for the number 70. The other is a narrative in Livy (xliii. 16), which really proves nothing except that the vote was evidently going against the accused when eight centuries of knights and *multæ aliæ primæ classis* had voted against him. But it appears to us to be a decisive argument that the canvassing in the elections was done by tribes—for of course this canvassing was of more importance for the lower classes than for the first; these, therefore, as well as the first, must have been divided into centuries. Moreover, the existence of these lower centuries appears to be attested by inscriptions. We must, therefore, still hold to the view presented by Mommsen, Marquardt, and Lange.

—Franz Liszt has exposed himself to violent attacks by the whole Semitic press of Germany. The new volume of his collected works which Breitkopf & Härtel are now issuing contains his article on "Les Bohémiens et leur Musique en Hongrie." In this article Liszt has inserted a ten-page disquisition on the Jews, after the manner of his son-in-law, Richard Wagner. He asserts that the Jews, having exchanged retail for wholesale trade and taken possession of the banks and the press, are now with these two greatest of civil powers endeavoring to ruin everything that constitutes the well-being and glory of that society on which they have fastened themselves like parasites. The problem that presents itself to the Christian is that of self-preservation, and the best means to secure that end would be the compulsory emigration of the Jews to Palestine. As for the art of the Jews, Liszt denies it all originality. They merely assimilate and imitate. "The music of the Jews, like their painting and stage-work, is modelled after the Chris-

tian type. They do not even attempt to emancipate themselves from our methods. What Meyerbeer did was simply to unite the German and Italian schools, to place them side by side. The combination was novel, and ensured him an unprecedented popularity; but it was nothing beyond a combination. Mendelssohn only repeated what Handel had done before him, although he made use of modern resources, adapted to the habits of his hearers. What the Jews do is simply to transform and recombine the elements which we create." The Berlin *Boersen-Courier*, which although edited by Jews has always been one of Wagner's principal champions, remarks in reference to Liszt's article that in the case of Wagner, whose aim was to create a distinct national German art and who spent his whole life in polemics, his attitude toward the Jews was quite explicable, though not excusable. With Liszt, however, it is quite otherwise, as his tendencies have always been of the most cosmopolitan nature. Born of German parents, in Hungary, he grew up in the German school of art, but not without being deeply influenced by the French spirit. These elements, harmoniously united in his compositions with Italian and Hungarian traits, have hitherto been symbolic of his life tendencies, which have always been liberal and conciliatory. If in his old age he has suddenly abandoned this policy, the *Courier* is inclined to attribute it to the weakening effects of his recent illness. Further details concerning this affair may be found in a late feuilleton by Dr. Hanslick in the Vienna *Neue Freie Presse*, and in a pamphlet published at Pesth by "Sagittarius," and entitled "Franz Liszt über die Juden."

—The second Philharmonic Concert at the Brooklyn Academy of Music opened with Schumann's Rhenish Symphony in E flat No. 3. This symphony has been lately described by a German critic in a few lines which are worth quoting: "It belongs to Schumann's latest period, whose sombre cloud-shadows rest heavily on it, yet the first part moves on in an energetic, almost defiant manner. Like an unexpected ray of sunshine the minuet-like allegretto in C then follows. All the rest we listen to with very divergent feelings; it is like the flight of an eagle with broken wings." We should wish to modify the last part of this judgment, for certainly the theme of the last movement is vigorous and new, and elaborated with the peculiar elastic spring, so to say, and the final rush of violins that distinguish Schumann's best compositions. The scenes from Gluck's "Alceste," which came next in order, were doubtless new to a majority of the audience. Even in Gluck's native country his operas are now seldom heard, although they are superior in finish and intrinsic worth to very many of the modern German, Italian, and French operas that have displaced them. They are characterized by a noble simplicity and grandeur that will no doubt some day lead to a general revival of interest in them, similar to the Berlioz revival we now witness. Gluck, the reformer of the opera, still retained its general forms—the division into recitatives, duos, trios, and so forth—and in so far differs from Wagner, who merged all these forms in his endless melody. But Gluck was Wagner's predecessor in the successful and conscientious adaptation of the music to the spirit of the text, and in the chaste simplicity of his melodic ideas, which were no longer disfigured by the tasteless ornaments of meretricious singers. These characteristics were well illustrated by the nine selections from "Alceste" which were rendered. The short orchestral scene representing the rescue of Alceste from Hades by Hercules is an agitated and stormy instrumental conception, that would be appreciated in a modern realistic music-drama. The chorus with solos "With wreaths of roses," with its graceful melody and "'cute" pizzicato accompaniment, was particularly appreciated by the large audience, which, be it said once for all, was uncommonly demonstrative in its expressions of pleasure at the excellent work done by Mr. Thomas's musicians, the chorus, and the soloists, Miss Schell, Miss Winant, and Signor Galassi. After the intermission, Signor Galassi sang the second scene of the first act of the "Flying Dutchman" as sequel to the overture. He succeeded admirably in portraying the despair and anguish of the unhappy Dutchman, his voice struggling successfully against the angry waves of the agitated orchestra. This was followed by the minuet and fugue from Beethoven's marvelous Ninth quartet in C, played by string orchestra. Fugue writing was not Beethoven's strong point, but after hearing this movement Bach himself would have patted him on the back or embraced him after the German manner. The manuscript duo from Berlioz's "Beatrice and Benedick," which was beautifully sung by Miss Schell and Miss Winant, proved an excellent addition to Mr. Thomas's concert repertory. The exquisite and subdued orchestral tint which is diffused over the close of this piece, like the lingering traces of a glorious sunset, is one of those simple but poetic touches that appeal alike to the masses and the musical enthusiast. The Festival Procession and chorus from Goldmark's "Queen of Sheba" proved a good enough selection for the close of a very successful concert. It is a pompous, noisy composition of no lasting musical value, with a semblance of grandeur which imposes at first, but disappears after repeated hearing. In some of the highest notes of the chorus the sopranos were a trifle flat and shrill, but in all the rest of their work the new chorus of about five hundred performers proved itself quite worthy of being heard in connection with Mr. Thomas's superb orchestra.

HOW ILLINOIS WAS MADE A FREE STATE.

Sketch of Edward Coles, Second Governor of Illinois, and of the Slavery Struggle of 1823-4. Prepared for the Chicago Historical Society, by E. B. Washburne. Chicago: Jansen, McClurg & Co. 1881.

THE story here related is important and interesting alike on personal and historical grounds, and eminently worthy of permanent record. Edward Coles was of a prominent Virginia family. His father's house in Albemarle county was a centre of the old-fashioned Virginia hospitality, its roof having frequently sheltered such guests as Patrick Henry, Jefferson, Madison, the Randolphs, and others of equal celebrity. Born in 1786, he was educated partly at Hampden-Sidney, and partly at William and Mary College. In his early college days his attention was drawn to the subject of slavery, and after extensive reading and reflection he resolved that he would neither be a slaveholder nor live permanently in a slaveholding community. In 1809, when he was twenty-three years of age, he found himself the possessor of a plantation and a considerable number of slaves, bequeathed to him by his father. While he was in a state of great embarrassment over his new possessions, President Madison invited him to become his private secretary. This appointment he accepted in the hope that through the acquaintances he was sure to make in Washington, he should gain information which would enable him to decide in what part of the non-slaveholding portion of the Union it would be most advantageous for him to settle. He remained in the service of President Madison for six years, acquiring much knowledge of public affairs and of the public men of the time, and enjoying the confidence of those with whom he became either officially or socially acquainted. That he remained true to his anti-slavery convictions, and that his mind dwelt much upon the slavery problem, is proved by his celebrated correspondence with Jefferson, in which he earnestly besought that eminent statesman to devise and put in operation some plan of gradual abolition. "In the calm of your retirement," he eloquently pleaded, "you might, most beneficially to society and with much addition to your own fame, avail yourself of the love and confidence of your fellow-citizens to put into complete practice those hallowed principles contained in that renowned Declaration of which you were the immortal author."

If Jefferson had heeded this earnest appeal of one of Virginia's younger sons, slavery might perchance have come to a peaceful instead of a bloody end. But he excused himself on the plea of old age, saying the appeal was "like bidding old Priam buckle on the armor of Hector." "I have overlived," he pathetically added, "the generation with which mutual labors and perils begat mutual confidence and influence. This enterprise is for the young, for those who can follow it up and bear it through to its consummation. It shall have all my prayers, and these are the only weapons of an old man." The real difficulty, however, was, that Jefferson was enmeshed and paralyzed by the doctrine of gradualism. "The laws do not permit us," he said, "to turn the slaves loose, if that were for their good." The Abolitionists of a later day, as our older readers will remember, were charged with having incited the South to enact the laws forbidding emancipation; but here is Jefferson's confession that they existed in 1814, seventeen years at least before the commencement of the agitation. The sage of American democracy, while confessing the wrongfulness of slavery, could see nothing for anti-slavery men to do but to go on holding slaves, feeding and clothing them well, protecting them from ill-usage, and waiting supinely for "the hour of emancipation" to come, as he was sure it must, "brought on either by the generous energy of our own minds, or by the bloody process of St. Domingo." He even tried to dissuade Mr. Coles from his purpose to leave Virginia in order to escape from the toils of slavery, and to induce him to remain there as a slaveholder. Happily, Mr. Coles's opposition to slavery was too intelligent and too earnest to permit him to take this bad advice.

After the conclusion of peace with Great Britain, Mr. Coles thought the time at hand for the execution of his purpose. In 1815 he resigned his position as private secretary and went on a tour of exploration to the Northwest Territory. On his return to Virginia he was surprised by an urgent request from the President that he would consent to go on a confidential and very delicate mission to Russia. He accepted the appointment, sailed for the Baltic in the naval ship *Prometheus*, in the summer of 1816, and having honorably and successfully fulfilled the objects of his mission, he visited France, England, Scotland, Ireland, and Wales, and returned to the United States. In the spring of 1819, having sold his plantation in Virginia, he removed with all his negroes to Edwardsville, in Illinois. It cost him much to break the strong social and political ties which bound him to his native State, but his conscience would not permit him to remain there as a slaveholder. His slaves were ignorant of his purpose to free them, but they followed him with unfaltering faith. It was a long journey in emigrant wagons over the Alleghanies to Brownsville, Pa., where they embarked on two flat-bottomed boats for a journey

by water of more than 600 miles, to a point below Louisville, Ky. The morning after leaving Pittsburg, while the boats, lashed together, were floating gently down the Ohio River, he called the negroes on deck, and in a short address informed them that they were no longer slaves, but free—"free as I was, and at liberty to proceed with me or to go ashore at their pleasure."

"The effect on them was electrical. They stared at me and at each other, as if doubting the accuracy or reality of what they heard. In breathless silence they stood before me, unable to answer a word, but with countenances beaming with an expression which no words could convey, and which no language can describe. As they began to see the truth of what they had heard, and to realize their situation, there came on a kind of hysterical, giggling laugh. After a pause of intense and unutterable emotion, bathed in tears, and with tremulous voices, they gave vent to their gratitude, and implored the blessings of God on me."

The grateful creatures tried to persuade him that he was too generous in freeing them all at once, and avowed their willingness to remain in his service until they could reimburse him for the expense of their removal from Virginia and get him well established in his new home. He not only declined their proffered service, but informed them that he should, upon their arrival in Illinois, give to each head of a family a clear title to 160 acres of land. They expressed their fear that in doing this he would reduce himself to want, and told him he had done enough for them in giving them their freedom. Soon after reaching Edwardsville he executed and delivered to them deeds to the promised lands. By advice of counsel, in order to protect them against the operation of the infamous Black Code of Illinois, on the 4th of July, 1819, he executed for each one of them an instrument of emancipation.

Strange as it may seem to those who remember the proscriptive spirit of later administrations of the Federal Government, this practical Abolitionist was appointed by President Monroe to be Registrar of the Land Office at Edwardsville. In this office he earned great popularity among the early settlers of the new State, which had been admitted to the Union only a year before his appointment; and in 1822, largely on account of his well-known anti-slavery principles, he was nominated for Governor, and the pro-slavery party being divided between two candidates, he was elected by a plurality of fifty votes. That a pro-slavery party was found at that time in a State from which slavery had been excluded not only by the Ordinance of 1787, but by its own Constitution, is a fact to be explained by the existence of a bitterly proscriptive spirit toward the negroes, and the determination of leading citizens to remove the legal barriers and add Illinois to the list of slave States. It was stoutly contended that the Ordinance of 1787 was null and void, being in conflict with the deed of cession by which the Territory was transferred by Virginia to the United States, that deed providing that "the inhabitants of the territory ceded, who professed themselves to have been citizens of Virginia previous to the cession, should have their possessions and titles confirmed to them, and be protected in their rights and liberties." It was assumed that the first right of every Virginia citizen was to hold slaves, and therefore that Congress had transcended its power in ordaining the exclusion of slavery from Illinois. As a matter of fact, slavery actually existed in the State at that time in spite both of the Ordinance and of her own Constitution.

Although Mr. Coles had been elected Governor, the pro-slavery party had a majority in the Legislature. In his inaugural address he reminded the Legislature of the illegal existence of slavery in the State, and recommended the adoption of measures for its abrogation and for the amelioration or repeal of the oppressive laws relating to free negroes. At once the State was thrown into a blaze of excitement. The pro-slavery party resolved to call a convention to frame a new Constitution which should remove every barrier to the legal introduction of slavery. To accomplish this required a majority of two-thirds in both houses of the Legislature. In the Senate the needed majority was found, but in the House of Representatives one additional vote was needed. When it was found that this vote could not otherwise be obtained, it was determined that an anti-Convention man should be put out of the House and a Convention man put in his place; and this, in defiance of the rules and of every principle of justice, was accomplished. The act providing for a convention was passed, but it had to be submitted to a vote of the people, and the opponents of the measure resolved to defeat it if possible. The story of this conflict, which is graphically told by Mr. Washburne, reminds us at every step of the "border-ruffian" period in the history of Kansas and Nebraska. The conflict was a most desperate one, the anti-slavery party being led by Governor Coles. The pro-slavery men, confident of success, were arrogant, insulting, and defiant. Fortunately there was a period of eighteen months before the election, in which to discuss the question in all its aspects, and to make a thorough exposure of the designs of the pro-slavery party. The conflict was very bitter, no quarter being given on either side. There were strong men and eloquent orators in both parties, and the rank and file of the people entered into the struggle with intense zeal. It would be interesting to dwell upon the story, especially those features of it which illustrate the courage and the enlightened statesmanship of Governor Coles; but we must content ourselves with announcing the result, which was a defeat of the project for a convention by a majority of 1,872 votes in a total of 11,772. The scheme was never renewed, the rapid increase of immigration from the free States forbidding all hope of success. It is pleasant to read "that to the eternal honor of the clergy of Illinois at that day, they were almost without exception" on the anti-slavery side of the question. One of their number, the Rev. John M. Peck, a Baptist, was especially conspicuous.

But while the convention project was overwhelmingly defeated, the pro-slavery party, rallying under the flag of General Jackson, carried the Legislature, and were able to fill the most important offices in the State with their own partisans, and to proscribe their opponents. They improved their opportunity to the fullest extent. Governor Coles was prosecuted for bringing his negroes into the State, contrary to the provisions of the Black Code enacted just before his arrival, but not promulgated till some months later. The judges of the lower courts, being pro-slavery partisans, ruled against him most unfairly, and he was subjected to many annoyances and much harsh experience; but he found relief at last in a favorable decision of the Supreme Court. The emancipated negroes, without exception, became industrious citizens and taxpayers.

Mr. Coles's term as Governor expired in 1826. In 1825 he had the honor of officially welcoming Lafayette to the State, thus renewing the acquaintance which he had made with him during his visit to Paris in 1818. He was not a candidate for reëlection. In 1831 he consented to be a candidate for Congress, but failed of an election. Some time about 1832 he removed to Philadelphia, where he married and passed the remainder of his days, dying July 7, 1868. Mr. Washburne says that in his later years he took much interest in public affairs, and that a "History of the Ordinance of 1787," prepared by him, was read before the Pennsylvania Historical Society, June 9, 1856. We do not remember, however, that he took any part in the national anti-slavery struggle which began about the time of his removal to Philadelphia. We have spoken only of his services in keeping Illinois from lapsing into the embrace of slavery, but it ought to be mentioned that his views upon all the questions of his time, as expressed in his messages to the Legislature of the State, were those of an enlightened patriot and statesman.

SOME HOLIDAY BOOKS.

Études in Modern French Art. By Edward Strahan. Illustrated. New York: Richard Worthington. 1881.

The Lady of Shalott. By Alfred Tennyson. Decorated by Howard Pyle. New York: Dodd, Mead & Co. 1881.

Poets and Etchers. Boston: James R. Osgood & Co. 1881.

THERE is scarcely sufficient flavor of France either in the illustrations or in the text of the 'Études' to excuse the title. *Études* presuppose a point of view decidedly European—if we may excuse the use of the word at all. "Studies" better define the decidedly cisatlantic smack of the whole make-up. The text is interesting, chatty, and often engaging in its richness of anecdotes and character-touches. Still, the reader must feel a little disappointed that the author has not given an idea of the great changes of the last decade, but has insisted on the status of his list of names at a period before the strength of the real modern throb had made itself felt in French art. In his classification of the artists he has been guided by the spirit of their productions, and in this he has shown good discrimination, and sometimes a thorough knowledge of the men of whom he writes. But he only covers a portion of the ground, and that not the most fertile. Why should Florent Willems be classed as a French painter and Alfred Stevens be not mentioned at all? The incomparable talent of the latter places him, without the slightest question, at the head of the painters of his class. How can Tissot be considered more of a French painter than Alma-Tadema, if we, with the author, agree to ignore the accident of birth? The selection is certainly incomprehensible unless it may be explained that the list of names chosen is rather the dealers' list than that which appeals most to artists and connoisseurs. Again, what study of present French art can afford to pass over Jules Breton and Bastien-Lepage? or what discussion of this subject can be comprehensive without an allusion to Vollon, the acknowledged master of execution? Indeed, how can an idea of the modern tendency of the so-called French school be given without including Duez, Mélingue, Cormon, Cazin, Merson, and the company of men, already in the front ranks of the profession, whose progress is changing the whole scheme and scope of the art of the great capital, and whose influence is felt where the names of Escosura, Anker, Boulanger, Chaplin, and Mazerolle are scarcely ever spoken? What painter or sculptor has done more to elevate French art of to-day than Paul Dubois? His existence is not recognized in the chapter devoted to sculpture.

There is every indication that Mr. Strahan has written up, or down, to a portfolio of proofs and fac-simile reproductions. It is a pity that a writer with such a fund of knowledge, and so rich a store of studio reminiscences, should not have had a better opportunity. In short, the volume under consideration is valuable for its excellent presswork and its numerous illustrations, rather

than for its quality as a handbook of modern French art. There is unquestionably a demand for a good study of modern French art, but the volume which shall satisfy the conditions of this demand must be made, not for the purpose of producing a book of a certain number of pages, with a proper sprinkling of illustrations, but with the honest endeavor to place the subject before the reader in its most intelligible and agreeable aspect. We cannot agree with the author, in his preface, that the binding is "art-binding" at all.

Although the field of colored decoration of books has been long successfully cultivated by English artists of note, Mr. Howard Pyle is the first American who has had the inclination or the courage to undertake this work with deliberation and care. He has been, without doubt, fully alive to the danger of imitation, and he has made no pretence of cutting loose from the accepted methods of treatment. In the 'Lady of Shalott' he has shown a considerable degree of inventive power, and a knowledge of the limitations of this sort of decoration, accompanied by great facility of execution. How much of the color may be credited to the lithographer we have no means of judging except from occasional combinations. It is more than probable, however, that Mr. Pyle's designs were far more harmonious and much richer than the plates are. Economy of printing is no necessary hindrance to the production of agreeable colors. A few stones with carefully selected tones will make far better decoration than a score of superimposed crudities. In printing from Mr. Pyle's designs the lithographer has chosen two or three raw colors which, when they occur in any quantity, entirely spoil the decorative aspect. An unqualified yellow and a harsh green occur too often to be agreeable to the eye, and it seems impossible that these tones should have been prepared under Mr. Pyle's direct supervision. The designs are too artistic to permit the suspicion that the author of them has so deficient a color sense as the plates would appear to prove. In all the decorations the figures are well enough drawn and sufficiently expressive. The landscapes are a little less studied than the other parts of the compositions, but the character of the designs is everywhere intelligently carried out.

Soft-toned paper, generous margins, large, clear type, excellent printing, and good arrangement, make 'Poets and Etchers' so far a credit to the publishers. The plan has been to furnish motives for five artists, by selecting from the works of Longfellow, Lowell, Emerson, Whittier, Bryant, and Aldrich. Twenty full-page etchings form the principal feature of the book, and professedly furnish the reason of its publication. Etchings are distinctly valuable as a class of artistic productions only when they have the peculiar directness and masculinity, so to speak, which especially belong to this process of illustration. Etchings as such have no *raison d'être* unless they have the above qualifications. Marvels of dexterity with a fine point are not necessarily true etchings. We do not exactly see the reason for all the four full-page etchings by each of the five artists who are here represented. Most of the compositions would not by any process of illustration rise above mediocrity, and some of them are even bad, inexcusably bad. Several figures by Mr. J. D. Smillie, neither well drawn, dignified, nor picturesque, do not deserve the treatment with point and plate. The frontispiece, a view in the Yo-Semite Valley by the same artist, intended to illustrate Whittier's "Lakeside," is forcibly touched, and is much more successful. Mr. A. F. Bellows does not put in a valid claim to be ranked as an etcher, unless acquaintance with the process be considered a claim. His figures, moreover, are absolutely devoid of good qualities. There is in the examples of Mr. Henry Farrer's work an element of simplicity which, while it sometimes inclines a little more toward the meagre than is agreeable, is certainly commendable. His landscape illustrating Lowell's "Last Walk in Autumn" is sympathetically treated. Mr. Samuel Coleman has shown no particular originality of design in his four etchings, but they have the merit of vigor of contrast. This quality is less noticeable in the work of Mr. R. Swain Gifford, but it nevertheless is a strong element there. His touch is forcible and knowing, and he has apparently put down without hesitation the compositions he had in mind. This frankness and confidence give his etchings a certain charm. It must be said in justice to Mr. Gifford that he is not seen at his best in this volume. Five good American etchers can be readily named. The only wonder is that the publishers did not form their little company with better judgment, or at least select examples which have an individual value.

A JACOBIN'S VIEW OF THE FRENCH REVOLUTION.

The Great French Revolution. 1785-1793. Narrated in the Letters of Madame J— of the Jacobin Party, Edited by her Grandson, M. Édouard Lockroy. London: Sampson, Low & Co. 1881.

In recalling those periods of the world's history when a new order of things was shaping itself amid infinite noise, tumult, and agitation, most of us have a strong desire to know how individuals thought and felt amid the whirl and rush of events going on around them—individuals, that is, who were not themselves engaged in making history, but were simply acted upon by the scenes and influences in the centre of which their lot happened to be cast. It is not possible to obtain this information from books written with a view to publication. Any one writing with such an object naturally and designedly drapes himself so as to present a becoming appearance in the eyes of a critical and unsympathetic world. Hence the extraordinary interest attaching to private letters which are the genuine and spontaneous outpourings of the writer's thoughts and sentiments, and which register, with complete fidelity, each successive phase of emotion while it was still actual. Such is the character of the recently published letters of Madame de Rémusat to her husband and son. The interest of Madame J—'s letters is of a more sombre and intense description. As the translators of the volume say in their preface: "The remarkable letters that compose this volume form the only personal narrative that has been presented to the public by an eye-witness of the terrible events which they describe from a Revolutionary point of view." Madame J— was a Jacobin of the Jacobins—or rather was transformed into one by the progress of events—and her letters from Paris, written almost daily either to her husband in the country or to her son in England, enable us to see the wild suspicions, the irrational fanaticism, and the baseless expectations which went to the building up of a French Jacobin. Madame J— is fond of dwelling upon her "sensibility" as a quality for which she is especially distinguished; the Jacobin's political creed, therefore, found in her a subject peculiarly adapted for its reception. With her, political truth and error may be said to have been a question of the emotions, and not of objective fact at all. There is not a line in these letters which indicates either perception or understanding of the functions of government. Abstractions and catchwords are all that she is ready to slay and be slain for, showing herself, thereby, to have been a typical Jacobin.

The first of the letters from Paris is dated June, 1790, when every good Frenchman and Frenchwoman believed that the millennium had already begun, at least in France. In this letter we read how "our good King, mounted on a fine horse, rode almost alone from the Tuileries to the Champ de Mars to hold a review of 4,000 citizen soldiers. . . . He was gay and as happy as a king. The people were delighted; the shouts of *Vive le Roi* came from all hearts. If," adds Madame J— with true oracular obscurity, "we glance at the history of England, if we sound the depths of the human mind, we shall find material for reflection in all this." A year later, and the prospect is still at "set-fair" in the judgment of Madame J—. "The people admire the National Assembly and adore the Constitution." As for Madame J— herself, she hopes "the new régime will bring forth virtue, and therefore it is that I worship the Revolution." On April 16, 1792, she still writes to her husband "in a sort of transport of pleasure." The fête has "passed off amid all the pomp, the magnificent simplicity, and the profound tranquillity of a festival of the people." But this is the last that we hear of pleasant weather. Clouds speedily cover all the sky. A month or two later Madame J— informs her husband that "Orgies are beginning again (at Court) as scandalous as those of Versailles; the healths of Condé and Bouillé are drunk; the national cockade is trampled underfoot, and so on. An unfortunate man, one of the King's Guard, was nearly murdered by his comrades for drinking the health of the 'Prince Royal' instead of the 'Dauphin,' but the others interfered in time. Bazire, who supplied all these details, says he had them from some brave body-guards who were there only by accident." These "brave body-guards, who were there only by accident," are typical of the kind of testimony which sufficed as a basis of belief for anything and everything in the credulous mind of a French Jacobin. They or their prototypes appear and reappear pretty frequently in the character of "informers," and no doubt of their perfect veracity ever seems to have touched the mind of any one. "Twenty *invalides*," we are told, "presented themselves at the bar, and nobly expressed their regret for the painful obligation that they were under to denounce their officers. . . . The utterances of these brave soldiers drew tears from our eyes." "Three young guards asked to be heard at the bar, and in the language of free and candid minds they denounced the horrors of which they had been the witnesses and the victims, having been exposed on account of their civic spirit to every sort of oppression." Madame J—'s "sensibility" caused her to believe with the whole strength of her being, and apparently without any attempt to sift the evidence, whatever a "brave body-guard," or any other chance "man in the street," might have to disclose respecting the machinations of the court. She, like the rest of the populace of Paris and the Parliament itself, believed that they were in nightly peril of being massacred in their beds by order of Louis XVI. and Marie Antoinette, and Madame J— ascribes their escape from this fate to a direct interposition of Providence. "I look," she writes, "upon all that has happened as so many miracles of His power and goodness toward the people. Men have had little to do with it. The crimes were accumulated, the circumstances were developed and collected together, by the Providence of the Revolution, without any help from human prudence; and this has forced the legislators to save us and themselves."

This phrase, "The Providence of the Revolution," occurs repeatedly in Madame J—'s letters, and it accounts for much. The French Jacobins, from Robespierre downward, pursued ends in politics in the spirit and by the methods of a religious persecutor. For a moment Madame J—'s "sensibilities" and her womanly tenderness of heart are shocked by the terrible September massacres, but by an effort she stifles the stirring impulses of pity and remorse. "Who wills the ends," she writes to her husband, "wills the means." We know, now, that these September massacres were the work, deliberately planned and executed, of Danton; to Madame J—, living in the very scene of them, they were caused by the "wild justice" of the people rising up in wrath against traitors and "Austrians."

"I must," she writes, "cast a veil over the crimes into which the people have been forced by those whose victims they have been for the last three years. The dark plots discovered on every side shed a frightful light, and an absolute certainty, on the fate which awaits the patriots. They must put to death or be put to death. To what a horrible necessity does the fatal work of their enemies drive them—heads cut off! priests massacred! . . . I cannot give you the details, although my reason tells me that kings and Prussians would have done a thousand times worse."

Perhaps so; but it was unfortunate for France, and for the world, that it did not occur to Madame J—, or to any of her brother Jacobins, that a kingdom of justice could hardly be established by borrowing from its enemies the very methods and weapons against which the new kingdom was to be a protest.

We get a glimpse of Robespierre himself in one of these letters. He, his brother and sister dine with Madame J— and her husband, a short time after the execution of the King, but while the "Reign of Terror" is still a good distance ahead. Madame J— writes to her son:

"I was much pleased with the Robespierre family. The sister is naïve and natural like your aunts; she arrived two hours before her brother, and we chatted like two old women. I made her tell me about their domestic life; it is exactly like ours—simple and frugal. Her brother had as little to do with the 10th of August as with the 2d of September. He is as capable of being a party leader as of catching hold of the moon. He is absent-minded, like a thinker; cold and formal, like a lawyer; but gentle as a lamb, and as sombre as Young. I see he has not our tender sensibility, but I believe he desires the good of the human race, though rather from justice than from love. For the rest, you need only see him face to face to be sure that nature never gave such attractive features to any but a noble mind."

It would be interesting to learn what Madame J— came to think of the "sea-green Incorruptible" in after years. In the course of these letters she has many idols, whom she discovers in succession to be formed of only inferior clay. She runs, in fact, through almost the entire gamut of French Revolutionary leaders, from Lafayette onward; admires each so long as the populace admire him, and then transfers her homage to the next popular god of the moment. The letters break off abruptly just as Robespierre is in the ascendant, leaving in the mind of the reader a great craving for an additional supply.

Captain John Smith. By Charles Dudley Warner. New York: Henry Holt & Co.

"When I consented," says the author, "to prepare this volume for a series which should deal with the notables of American history with some familiarity and disregard of historic gravity, I did not anticipate the seriousness of the task. But investigation of the subject showed me that while Capt. John Smith would lend himself, easily enough, to a purely facetious treatment, there were historic problems worthy of a different handling." The figure of Captain Smith combines, in a rare degree, the qualities of picturesqueness and historic importance, and Mr. Warner, without shirking the historically important (and comparatively uninteresting) incidents in Smith's career, has a keen eye to the humorous side of them, and describes them with the intuitive skill of a humorist. His narrative of Smith's American experiences rests, of course, on Mr. Deane's annotated editions of Smith's own accounts, which had already been systematically arranged, and, to some extent, "popularized," by Prof. Henry Adams. But Mr. Warner's book will, from its form, be read far more widely than Mr. Adams's article, for it humorizes, as well as popularizes, the amusing tale of Smith's mendacity and Pocahontas's fame. He is also in a position to mention and to refute the rebutting evidence brought in after Messrs. Deane and Adams's case was closed. Moreover, he relates, with considerable detail, and, it need hardly be said, in a highly amusing manner, the remarkable adventures undergone by Smith before he came to this country—a period passed over very lightly by previous historians.

The chief fault we have to find with Mr. Warner is that, in his natural and proper contempt for the dignity of history, he is occasionally more facetious than the circumstances demand; as when he remarks that "it is nearly as certain that St. Botolph founded a monastery at Boston, Lincoln, as it is that he founded a club afterward in Boston, Massachusetts." Most biographers, we suppose, would avoid saying of their heroes, as Mr. Warner does of his, that "he loafed in the coffee-houses," and also avoid such expressions as "he thrust his lance through the sight of his beaver, face, head, and all," and "he drops into this remark" (p. 265). It is startling to read on page 249: "The London to which Smith returned was the London of Shakespeare's day. . . . . The Thames had no bridges"! The volume is attractively printed, and has an index. We commend it to the contributors to the dictionary of the Philological Society, with the hint that they will find in it, if nowhere else, authority for the two words "bumptious" (p. 62) and "truck," meaning pewter dish (p. 42). To these we may add "amind" (p. 240).

Recollections of Auton House. A Book for Children. With illustrations. By C. Auton. Boston: Houghton, Mifflin & Co.

Children of a larger growth were, as the author admits in his preface, the immediate audience for which these reminiscences were intended; but perhaps only a fastidious taste would keep this book out of the hands of any well-behaved boy or girl. The illustrations are realistic even to portraiture. The skill and humor and general style of them betray the family name and the geographical scene of the narrative to a sufficiently wide circle of readers; others, with some knowledge of New England, have only to ask themselves what city is reached by boat overnight from New York, and has a noticeably large colored population, and understands perfectly the expression "a Rhode Island turkey." It would be an injustice to this little book to pass it by among the ephemeral juvenile productions of the year. It is more than an irresistibly droll family history: it is a true picture of the domestic life of a period dating two generations back — broadly, among the well-to-do classes in various parts of the North; and narrowly, among the respectable Whig upper classes of New England. This life has wholly disappeared before friction-matches, and rubber overshoes, and gas, and fixed washbasins, and railroads, and the telegraph, and the Know-nothing movement, and the Rebellion; and the 'Recollections,' if one could but help laughing over them, might be pronounced a serious contribution to American history. It is, however, the peculiar (αὐτῶν) constitution and activity of the Auton household that flavor this restoration of a bygone time—the "ark" and trundle-bed sleeping arrangements; the eleventh-hour and the early-morning johnnycake repast; the pranks of the nursery; the putting out of Christmas shoes instead of stockings; the boy who, for the sake of a croupy cough and all the coddling which that implied, got a window opened on a cold winter's day, "in order that he might hang his head out and 'hoarsen up,' as we called it"; his brother, who sat in his night-drawers on the top stair while his sister went below with the message, "T. Auton wants to know if he will live till morning"; the girl who "chewed out" her weekly doll-wash by way of respecting the prohibition against playing with water in the nursery; the pet lamb; the spaniel who had fits; the nurses "Aunt Moody" and "Deb'rah"; the woodsawyer. These are a faint hint of the entertainment which every page of the 'Recollections' affords.

Half-Hours with Greek and Latin Authors. From various English translations. With biographical notices. By G. H. Jennings and W. S. Johnstone, authors of 'A Book of Parliamentary Anecdote.' New York: D. Appleton & Co. 1881. Pp. 532.

This is a well-selected collection of extracts from classical writers, long enough to be characteristic and instructive, short enough to be quickly read. There appears to be no plan of arrangement except that of variety. The first selection is from Herodotus, the next from Horace, the next from Cæsar, the next from Theocritus, etc., while specimens of Horace are also found in three other places. The selections are such as, from their relation to English literature and modern thought, are likely to be especially interesting to readers who are not acquainted with the classic languages; *e. g.*, Plutarch's account of the death of Cæsar, the mention of the Christians by Tacitus and Pliny, Demosthenes on the Crown, Plato's account of the death of Socrates. Not only the selections but the translations are so selected as to afford a considerable variety; for example, Homer is represented by Chapman, Derby, and Pope. We are surprised to find Jowett's translations of Plato and Thucydides unrepresented. One could wish also for some of those occasional translations, not by professional translators, like Matthew Arnold's from the "Adoniazusæ" of Theocritus, and D'Arcy Thompson's from the "Trinummus" of Plautus, either of which is better than the one here given. The biographical notices are very brief, but sufficient for those to whom the literature is the chief thing. We notice (p. 61) that the birth of Tacitus is placed A.D. 60, which is certainly too late.

Spain. By James A. Harrison, Professor of History and Modern Languages in Washington-Lee University. Boston: D. Lothrop & Co. Pp. 717.

A book of "entertaining history," embellished with "over one hundred illustrations," is naturally expected to be a book of lively narration—the incident and romance of history. This expectation does entire injustice to Mr. Harrison's conception of his undertaking, for his history is solid, sober, and even dry. The "entertainment" comes from the illustrations, which, with very few exceptions, have absolutely nothing to do with the text, but represent scenes and characters of the present day—scenes from the Alhambra; the interior of Seville cathedral; balconies at Granada, with dark-eyed beauties

peeping out from behind the drapery; cattle merchants, and peasants. They appear to belong to some book of travels, and most of the plates seem much worn. This may not be the case, however, for the portraits in the text, which were probably made for the book, are as wretched examples of wood-engraving as one could wish to see.

The book has, as we have said, solid merits, but the author has, we think, been embarrassed by the extent and complication of his task, and does not often show at his best. He has no skill in carrying a thread of history through the confused epochs when half a dozen rival kingdoms occupied the peninsula; for this period his relation is confused and obscure. Neither, to tell the truth, is he good in political history. What shall we say of a history of Spain that only mentions Alberoni once, and that casually, and says nothing of the Parma branch of the Spanish Bourbons? The two most interesting questions of Spanish dynastic history in modern times—the succession to Charles II. in 1700, and the Carlist movement in the present century—are very inadequately explained. The best parts of the book are those which treat of literature and institutions. We will instance, as particularly good, the description (p. 580) of the three eighteenth-century statesmen, Aranda, Campomanes, and Florida Blanca. The author describes character carefully, and on the whole justly, but too much in "the catalogue style"—an enumeration of qualities, rather than an analysis. Take, for example, the description of Ferdinand the Catholic (p. 355):

"Ferdinand was a bigot; he was not free from the taint of perfidy tossed to and fro so freely in that age; he was parsimonious, subtle, and insincere; he utterly lacked geniality, and never threw off the gravity which he thought becoming the Spanish grandee; he indulged in vicious gallantries, in egotistic designs, in an ill-assorted second marriage: he was suspicious, vulgar, and uneducated; all this one is willing to grant, and yet concede that there were elements of true grandeur in his character. In the judgment of many of his contemporaries, he was the most renowned and glorious monarch in Christendom. Impartial, economical, indefatigable in his attention to business, he was neither epicure nor ostentatious; he loved history, horsemanship, the rites and ritual of a splendid church ceremonial, knightly virtues and chivalrous undertakings; and with unusual control over his temper, undaunted personal courage, and a far-seeing political sagacity, he made few bad mistakes, and, by wonderful good fortune, raised Spain, jointly with his magnanimous queen, from a conglomeration of reciprocally hostile states into a spacious and concentrated European empire."

The style, as will be seen from the above extract, is not always careful and accurate: did Ferdinand, for instance, raise "his magnanimous queen," etc.? Defective, however, as the book is in many particulars, it meets the demand for a brief history of Spain, and will be found acceptable by many.

There are several maps, reduced from Spruner, and therefore good, but so fine as to be almost useless, and three genealogical tables, taken from Mr. George's work. We notice here a discrepancy between table and text: the table counts "the Emperor" as Alfonso VIII. (reckoning his father, Alfonso I. of Aragon, as the seventh of Castile), while the text, more correctly, calls him Alfonso VII. (p. 188). In the account of Mexico (p. 381) Mr. Bandelier's valuable monographs are referred to the transactions of the "American Archæological Association," instead of the Peabody Museum. The index is not very complete; for example, there is only one reference in it under the head of Navarre.

Frederick Keppel, 23 East Sixteenth Street (Union Square West). Also at Brentano's, 5 Union Square.

Correspondence is respectfully invited.

AN ELEGANT CHRISTMAS PRESENT.

HUDSON'S

Harvard Shakespeare.

The latest and best edition published in this country.

In ordering, be careful not to confound the Harvard Shakespeare with an old edition made in 1851.

The Expurgated Family Shakespeare,

By Mr. Hudson, is just completed.

It contains 23 plays, and these are given entire, save the bare omission of such lines and expressions as the editor has always deemed it necessary to omit in class. The omissions do not in any case reach so far as to impair in the least either the delineation of character or the dramatic action. On the other hand, he has not meant to retain any matter not fairly pronounceable in any family.

Hudson's Life, Art, and Characters of Shakespeare,

Uniform with the Harvard Edition, will be included with it at a slightly increased cost.

GINN, HEATH & CO., Publishers,

Boston, New York, and Chicago.

The Book-Hunter.

BY

Dr. JOHN HILL BURTON.

The "Memorial Edition" (now ready), being a *fac-simile* reprint of the Original Edition, with the Additions of a Memoir and a full Index. Crown 8vo, pp. xvi.-396. Roxburgh. Price $3, *net*; postage, 9 cents.

Suicide:

AN ESSAY ON COMPARATIVE MORAL STATISTICS.

By HENRY MORSELLI, M.D.,

Professor of Psychological Medicine in the Royal University, Turin.

The original expressly abridged and revised by the author for the English version.

This work is a scientific inquiry, on the basis of the statistical method, into the laws of suicidal phenomena. Dealing with the subject as a branch of social science, it considers the increase of suicide in different countries, and the comparison of nations, races, and periods in its manifestation. The influences of age, sex, constitution, climate, season, occupation, religion, prevailing ideas, the elements of character, and the tendencies of civilization, are comprehensively analyzed in their bearing upon the propensity to self-destruction. Dr. Morselli is an eminent European authority on this subject, and the discussions that have latterly been prominent in the English journals upon this question have been largely drawn from the original Italian edition of this book. It is accompanied by colored maps, illustrating pictorially the results of statistical inquiries.

"An essay on suicide has its rightful place in a scientific series. The subject is one of the most profoundly interesting of modern social phenomena; and it is, moreover, a subject on which the method of statistical inquiry has for some time been employed with valuable results. If ever there is to be a science of sociology, grouping facts and formulating laws with something of the precision which distinguishes the physical sciences, statistics must undoubtedly hold an important place among its data. A careful reading of Professor Morselli's volume is well fitted to encourage the hope that such a science is a possibility of the not very remote future. It is a very careful summary of the latest results of statistical investigation into the circumstances and agencies which influence the phenomenon of suicide in modern civilized communities."—*Pall Mall Gazette.*

"Dr. Morselli has devoted himself for many years to the observation and treatment of mental disease, and he has here set down the result of his investigations. In different chapters he discusses the increase and regularity of suicide in civilized countries, the influences which act on suicide, ethnological and social influences, influences arising out of biological and social conditions of the individual, determining motives and methods and places of suicide."—*Boston Transcript.*

"There is much that is curious and interesting in this study of the influences—cosmico-natural, ethnological, social, and psychological—which act on suicide, and which seem to furnish hints of the laws which regulate that apparently most wilful and unnatural of human actions, voluntary self-destruction."—*Boston Journal.*

"It is a book that one cannot praise too highly, and every physician, lawyer, preacher, reformer, and well-read man of any sort ought to have it by him."—*Phila. Times.*

"Will it startle the reader to learn that suicide h[as] laws, and is as regular as the tides? That is wh[at] book will teach him. It is an exhaustive search [in] whole broad field of European statistics after t[he] but constant conditions which govern self-de[ath]. It is a learned and curious essay, full of st[ra]nge facts and stranger conclusions."—*Literary World.*

"To have such an apparently eccentric [as] suicide tabulated by countries, causes, and the ti[me] year, is the comprehensive and successful inqui[ry] by Professor Morselli, of Turin Royal Universi[ty]. This Italian savant is Physician-in-Chief to the Roy[al] um for the Insane, which fact, apparently, has [en]bled these researches into the 'tragic psychologies' [ch]aracteristic of our age. The book is a monument [of] nt labor and comparative scrutiny."—*Phila. Ledger.*

"Professor Morselli, of the Royal University of Turin, has just published one of the most valuable and interesting volumes on the subject of suicide which could be desired by the most exacting student of the topic."—*N. Y. World.*

"In his exhaustive monograph, the influences of climate, season, country, section, race, condition, religion, age, sex, and profession or occupation, are carefully considered in their relation to the act, and the deductions drawn therefrom, as shown in his statistical tables, abound in interest, and in many cases are curious and even startling."—*The Critic.*

12mo, cloth, price $1 75 ("International Scientific Series").

LITERATURE OF THE DAY.—16. THE COLLECTING MANIA. Six illustrations.

PROSPECTUS FOR 1882.

At the beginning of 1881 *Lippincott's Magazine* entered on a new series, at a reduced price, with the distinctive purpose of presenting such a variety of reading matter—for the most part light and entertaining, yet of real literary merit—as should commend it to the general mass of cultivated persons and ensure it a welcome in many American homes. Devoting a large proportion of its space to fiction, in which short serials are made a noticeable feature, and to sketches illustrative of social life and manners, it has included in its list of subjects curiosities of science, especially natural history, popularly treated, travel and adventure at home and abroad, field sports and angling, and, occasionally, political, historical, and educational topics susceptible of fresh and lively discussion. The serial stories published during the year have been marked by a piquant originality, and have met with a warm reception; while the general attractiveness of the Magazine has gained for it cordial approval and an increased circulation.

The conductors of the Magazine hope not only to maintain its reputation, but to enhance and extend it by constant improvement in the same direction. Their arrangements for the coming year embrace a larger number than ever before of CONTRIBUTIONS OF A POPULAR CHARACTER.

A SERIAL STORY ENTITLED "STEPHEN GUTHRIE," in which some peculiar and striking phases of American life are vividly and dramatically treated, is commenced in the January number, and will run through six months.

THE EDITORIAL DEPARTMENTS will maintain their present standard of acknowledged excellence, and THE ILLUSTRATIONS will be of a higher character than any that have hitherto appeared in the Magazine.

FOR SALE BY ALL BOOK AND NEWS DEALERS.

C. P. Buckford Jan 27 1882

The Nation.

NEW YORK, THURSDAY, DECEMBER 29, 1881.

The Week.

THE week in Wall Street was broken by the two Christmas holidays, but on the days devoted to business the Stock Exchange was extremely active, the sales of stocks on one day having amounted to nearly seven hundred thousand shares, each of the par value of $100. This activity was the result of a liquidation of stock accounts which were supported only by 10@15 per cent. "margins"; and this liquidation was forced by a few leading speculators, who began battering prices, and who were helped later by the reports of the year's business of the Vanderbilt railroad companies. These reports showed clearly that the railroad war has worked great havoc with the net receipts of the trunk-line roads. The decline in the prices of the principal stocks during the week ranged from 1 to 11 per cent., and the general temper of speculation in the "Street" was changed most decidedly from "bullish" to "bearish." As usual after such a decline, outside capitalists who watched for such opportunities came in as buyers of selected stocks. The general trade of the country continues prosperous; the half year about closing will probably show larger profits to many branches of business than ever before in any six months on record, so that the depression at the Stock Exchange appears to be merely a speculative reverse. The money market was easy for borrowers during the week. The New York banks gained $1,814,000 in reserve. Foreign exchange fell to figures which permit gold imports at a profit. United States bonds were in good demand, and amid all the general depression at the Stock Exchange advanced ¼@¼. The price of silver bullion in London was steady, and at the close of the week the 412½ grain silver dollar had a bullion value of 87 cents.

As is reported from Washington, the principal measures by which President Arthur has sought to relieve himself of the almost intolerable pressure of office-seekers consist in limiting the time for the reception of visitors to certain hours on Mondays, Wednesdays, and Thursdays, and in referring applications for office to the heads of the several departments. This is undoubtedly good as far as it goes, but it does not go very far. It will give the President some breathing time. It will suggest to office-seekers and their friends that they will have little chance to make to the President personally "a full statement of the case," and to delegations from Maryland or Virginia that not every one of their members will have an opportunity to make a set speech at the Chief Executive. Nevertheless, it does not touch the source of the evil. If office-seekers are turned away from the White House and are referred with their applications and claims to the different departments, they may let the President more or less alone, but they will pounce upon the Secretaries with intensified energy, and the Secretaries need their time and laboring force for the public business just as much as the President. Indeed, as actual work is distributed in the Government, the President can afford to give more time to the office-seekers than most of the heads of departments can. If there is merely a transfer of the pressure from one point to another, from one officer who can ill afford to give his time to it to several others who can afford it still less, then it is evident that this measure is after all only a palliative, and not even a very strong one, but by no means a remedy.

It is generally believed that Mr. Lincoln will remain at the head of the War Department, and as to the selections President Arthur has made, or is going to make, for the Interior and Navy Departments, there are conflicting rumors. One of these is that Mr. Kirkwood is to remain in the Interior, and it would not be surprising if it had occurred to President Arthur's practical sense that frequent changes in the headship of that department are apt to be particularly hurtful to the public interest. The Interior Department is an aggregation of the most heterogeneous branches of the service, with the needs and the strong and weak points of which a Secretary can become sufficiently acquainted only after many months of very hard work. At the same time, in the Interior Department more than anywhere else is a thorough knowledge of the administrative machinery, as well as of the influences which are constantly striving to use it for bad purposes, required on the part of the chief to prevent corruption and scandal. The Interior Department should, therefore, least of all be subjected to frequent apprenticeships.

The appointment by the President of Professor Hilgard to the superintendency of the Coast and Geodetic Survey is gratifying to all friends of civil-service reform. It must, of course, be observed that, since the members of the corps are professional men and specialists, the organization is in a manner placed beyond the reach of seekers after political spoils, and it is fortunate that, by the judicious action of the President, the rules and traditions of the service—namely, promotion by merit and tenure during good behavior—have not been disturbed. The fitness of the new superintendent for the position to which he has just been appointed has been amply proved during the thirty-four years or more of his connection with the Survey. His scientific acquirements received recognition at home by the Government as early as 1863, when he was appointed one of the members of the National Academy of Sciences on its incorporation by Congress, and abroad by having offered to him the directorship of the International Standards Bureau. His executive ability was tested during the trying years when, owing to the illness of Professor Bache, the responsibility of conducting the Survey devolved entirely on Mr. Hilgard.

There is nothing particularly remarkable about the construction of the Committees of the House considered as a piece of political workmanship. The Speaker has in a few cases disregarded the general principles which usually govern his action in this matter—the first of which is, of course, that the majority to which he owed his election must be taken care of, and this he has respected in such manner as to make it appear that he owes more to the Pennsylvania delegation than to that of any other State. The second is that he must do something handsome for his more prominent competitors of his own party, but he has disregarded this in his treatment of Mr. Kasson. It is, however, useless to discuss the make-up of committees from the political point of view simply. The considerations which determine it are very numerous, and in a very large degree personal, and in most cases known to few beyond the Speaker himself. From the point of view of the public business, there are two committees the composition of which has just now unusual interest—the Committee of Ways and Means, and the Committee on Coinage. No two questions are so important at this moment as those with which these committees will respectively have to deal—viz., in what manner the revenue shall be raised, and how much longer we shall go on coining silver. These committees ought to contain a fair representation of the opinions held by the Republican party at least on these very important problems. As a matter of fact the Committee on Ways and Means contains only three opponents of the extreme protective theory, Messrs. Tucker, Carlisle, and Morrison, and not one of them comes from the great seats of American industry and commerce; Messrs. Tucker and Carlisle are Southerners; Mr. Morrison is from Illinois. It is remarkable but true, that the solitary representative on it of the great manufacturing and commercial region covered by New York and New England, Mr. Russell, is a fierce protectionist and Mr. Warner Miller's right-hand man in the paper business. The other places are divided between Pennsylvania and the West, Pennsylvania having three members, including the chairman, Mr. W. D. Kelley.

An attempt has been made to soften this by representing Mr. Kelley as prepared to modify his opinions and anxious to connect his name with successful tariff revision. It may be that he entertains some such purpose, but it is useless to ask moderate tariff men to believe that he will pursue it with steadiness, or that he has any clear conception of what moderation means. Mr. Kelley owes everything in politics to his having been all his life a fanatic. It is his fanaticism which has prevented his aberrations about greenbacks and silver from ruining him. To suppose that he will now lay aside his fanaticism and become judicial-minded over the claims of his idol on popular worship, is expecting a great deal. Steadiness of purpose, too—the very first requisite of a tariff reformer—is hardly to be looked for from a gentleman who, after having twice re-

ported in favor of the demonetization of silver, and warmly supporting it, went about the country two years afterward denouncing the demonetization as the result of a bondholders' conspiracy. The opinion of the commercial and industrial world about the consequence of continuing the coinage of silver at the present rate is well known. This world is very nearly as sure that, in the absence of European coöperation, it will result in reducing us to a single silver standard as that the sun will rise to-morrow. This may be a wrong opinion, but it is held by the great body of those who have most to do with the work of exchange, and it is certainly entitled to careful hearing before those who have the coinage matter in hand. Nevertheless, the Committee on Coinage contains only one representative of the Eastern States, Mr. Fisher, the Chairman, who is said to be the only man on it who is opposed to the policy we are now pursuing. The rest are gentlemen from the West, who either have silver to sell, or look on bankers as cormorants who can be best foiled by lowering the value of the circulating medium.

We have more than once of late referred to the difficulty of obtaining from writers and speakers on Mormon polygamy—who are very numerous just now—any practical suggestions for its extirpation. It is safe to say that the objections to polygamy, both moral, social, and political, are fully established and very well known. The power of the United States is also now beyond doubt. What we need is light upon the manner in which this power can be brought to bear on the "twin relic of barbarism." We therefore turned with much interest to an article on the subject by Senator Edmunds in *Harper's Magazine* for January, hoping to find in it some practical suggestions toward the solution of the problem, but confess that we have been somewhat disappointed. He acknowledges the failure of the existing legislation, owing to the difficulty of proof and the difficulty of getting impartial jurors. How this difficulty is to be overcome he does not explain beyond saying that it might be overcome by "suitable legislation"; though what this "suitable legislation" is, is just the kind of information we expect from a Senator. He deepens the mystery by remarking that if the "suitable legislation" were enforced with "the same vigor" shown "in punishing illicit distilling, the practice of polygamy might in a very few years be broken up." How this can be we fail to see. In polygamy the wife corresponds to the still in the crooked-whiskey business, and illicit distillation could never be broken up if the still could not be destroyed and the whiskey spilt, or if the still, when it heard the officers coming, ran off with the distiller or clung to him and refused to be separated from him. Senator Edmunds does not propose that we should serve Mormon wives as we serve illicit stills, that is, confiscate or destroy them. Toward the close he grows a little more practical, and says that the encouragement of non-Mormon immigration would have a valuable effect in the right direction, and also suggests the annexation of the Territory to adjoining States and Territories as possibly an "effectual disposition of the subject." But then how is non-Mormon immigration to be encouraged? By the Government, or by volunteer efforts, as in the case of Kansas and Missouri?

District Attorney Beatty has written another letter on the subject of polygamy, in which he makes several suggestions as to changes in the law. He would, first, make the living in and practice of polygamy a criminal offence, just as the polygamous marriage itself is now. The difficulty, however, with this is that, unless the mere fact that a number of women live under the same roof with a man is to be taken as proof of the practice of polygamy (which involves a serious change of the law of evidence), it would be just as difficult to prove the cohabitation as to prove the marriage. Again, he would have wives made competent witnesses in all cases, on the theory that some of them would be willing witnesses, while others could be forced to testify. But there is no reason why they should be willing to testify, as their coming forward would merely have the result of making them outcasts from the only social existence in which they have any position, and the idea that they can be forced to testify is absurd. Any attempt of the sort would be a kind of legal persecution; it would probably be very welcome to the Mormons, for it was by persecution that the church was originally built up. Mr. Beatty also advocates the disfranchisement of all polygamists, including of course the women, who, after having been given the suffrage in the interests of monogamy, have basely used it to further those of Mormonism. The more of Mr. Beatty's letters we read the more convinced we are that Judge Poland, after all, showed that he understood the real difficulty in the case better than any one when he used to ridicule in Congress the idea that the "Mormon problem" could be solved by simply legal means. Any useful bill for the alteration of the law of marriage in Utah, he said, must wind up with the provision that "the President shall have power to enforce the provisions of this act by means of United States troops."

The London *Economist* sees in the new foreign policy of the United States instituted by Mr. Blaine and apparently supported by President Arthur a probable expenditure for naval and military force—without which the new foreign policy would be mere wind—sufficient to reduce the Treasury surplus by one-third if not more. It adds, however: "We may be wrong, for the whole body of the American people is inscrutable, invariably gets its way, and rarely makes mistakes." This saving clause contains the truth in a nutshell. There is no evidence and has been none from the outset that the traditional policy of the country as regards foreign affairs—aversion to entangling alliances and complications with other countries, and especially to such as are likely to lead to war—has been weakened or altered in the public mind in the slightest degree by the recent sallies of Mr. Blaine in the field of diplomacy. This traditional policy applies to South America, to Central America, and to the West Indies as well as to Europe, and the Monroe doctrine itself is in harmony with it. The central and governing idea of the Monroe doctrine is the prevention of foreign complication and foreign wars by the application of the principle *obsta principiis*. The rejection of San Domingo, when its annexation was pressed by General Grant at the height of his popularity, was grounded partly upon the apprehension that its possession by us might lead to foreign complications. The refusal of Congress to appropriate money for the purchase of St. Thomas, after a treaty of cession had been negotiated with Denmark, was based largely upon the same apprehension. In so far as the policy instituted by Mr. Blaine can be shown to tend toward lasting peace with foreign countries, and the avoidance of international disputes and war expenditures, it will be sustained by public opinion; but the country was never less inclined to pick quarrels with other nations than now, and never less disposed to throw a dollar of its treasury surplus into the gulf of war.

The Guiteau trial became rather more scandalous than usual on Friday. The language addressed by the prisoner to the jury—"One of the jury has lost his wife, and I am sorry for it. I go so far as to say that one of those jurymen will get off that panel as an act of God, if I can't get justice in any other way. God knows that I would not have shot the President if he had not put it on me"—if it means anything, means a threat that he will, if pushed to extremities, kill one of them. Of course, there is not much chance of his doing anything of the kind; but that such a threat should be made in open court, and allowed to go unpunished by the judge, is an event entirely unprecedented in the annals of criminal jurisprudence. Guiteau, who has been disgusted with Mr. Scoville's unskilful cross-examination, on Friday called in the services of one of the witnesses, Charles H. Reed, of Chicago, and requested that he be allowed to act as counsel also. No objection was made to this, and Mr. Reed, whose method of cross-examination is apparently as much too searching as Mr. Scoville's is too mild, was formally taken into the case, and introduced by Guiteau to the Court, the jury, and the American people.

The comments of the English press on the Guiteau trial are extremely humiliating to our pride, not because they are severe, but because they are in the main well founded and just. Fair criticism upon Judge Cox is not directed against the latitude allowed to the prisoner in court, although this has been stretched at times beyond reasonable limits, but against the *tout ensemble* of the trial. Neither law, nor precedent, nor custom, nor public opinion, warrants the admission day after day of crowds of people to the court-room to laugh and applaud at the sharp hits of the prisoner, counsel, and witnesses. When we reflect that this is the trial of the murderer of a beloved President, the last scene and climax of the most appalling tragedy of recent times, the falling of the curtain upon a nation

in mourning, the transactions in and around the court-room where the trial is going on are simply ghastly and horrible. The judge, it seems, has so far awakened to a sense of the fitness of things as to order that the prisoner's cell be closed against reporters and visitors, so that his daily reception and levee, which is incense to his nostrils, may be no longer indulged in. But even this order, it is said, was made not in behalf of public decorum, but at the instance of the prisoner's counsel. A dark threat was thrown out by the judge last week, implying that if the prisoner did not behave himself he would be placed in the dock. Seeing that the dock is provided expressly for the reception of prisoners on trial for felonious crimes, and that Guiteau has a hundred times violated all the proprieties of a common police court, the hint that he may yet be placed in the dock is nearly as terrible as the threat of the able-bodied æsthete in the play of "Patience" to launch a curse at the head of the other able-bodied æsthete. It is rather late in the day for the judge to resort to extremities with the prisoner, but he can at least keep order among the spectators and outsiders, whose presence and attention are the joy and inspiration and breath of life of the prisoner.

A bill has already been passed by one branch of the Virginia Legislature, and will soon be passed by the other, to relieve from legal disability some two or three score of more or less eminent citizens who, as principals or seconds, were engaged in duels during the last two political canvasses in the State. No physical disability resulted from these desperate encounters, with a single exception in the case of Mr. R. R. Campbell, who "lost a finger." Whether this conspicuous hero of two campaigns was wounded by the discharge of his adversary's pistol or his own, does not appear. If then the political disqualifications of the participants are removed, these affairs will turn out to be quite harmless. Of course the law against duelling is a farce if the Legislature suspends its operation upon persons who incur its penalties. There is a reason why, from the duellist's own point of view, political disability should be enforced. It has come to be well understood that there is no bodily risk in "going out"; but the theory of "the code" is that some risk is essential to the "vindication" of "wounded honor." If the law is not enforced, there is no risk at all; but if it is rigidly executed, while the upholders of duelling can no longer say that an offence is "wiped out in blood," they may at least say that it is "wiped out in disability." There is another aspect of the question which is more serious. Many of these men were disqualified from holding office by their violation of the criminal laws of the State before the recent election; so that when they were voted for they were not eligible. But if they were not eligible, the candidates who ran against them must have been elected. They can no more be entitled to their offices than if they were dead or in prison. If all this is so, it would seem as if the proposed act were unconstitutional, so far as it is intended to affect the titles to these offices. As a general rule, the title to office, once fixed by election, cannot be altered by subsequent legislation any more than the title to land. The question could be brought up, of course, by a *quo warranto* suit.

A somewhat important meeting of the Socialist-Labor party began on Monday in this city. It was the regular biennial session of the National Convention, and the usual report of the Executive Committee was read. It shows, what every one must have expected, that during the last five years the party has been steadily declining in strength. The explanation offered is that so often put forward by the leaders of waning movements—"internal dissensions and lack of effort." Since 1876, when the party was organized, only $600 have been expended for agitation. During the same time $15,000 or $20,000 have been lost in attempts to establish newspapers, and over $10,000 have been sent to Germany. The failure of the Labor Socialists to make any mark in politics is due really to the fact that the rapidly returning prosperity of the country has made their doctrines and principles every year more and more unpopular and unintelligible. The attitude of the Socialist in the midst of a general "boom" is one which cannot be maintained. Good wages and plenty of work have a similar effect upon the wage-receiver to that which certain and increasing dividends have upon the bloated bondholder. They make him indifferent to the numerous wrongs under which the world groans, and which greenback parties, and land leagues, and trade-unions, and granges, and socialism are intended to redress, and sink him in a contented indifference to the future of humanity. This is, of course, little less than appalling to the enthusiasts who in times of scarcity and depression are able to turn his wretchedness to such good account.

The public has generally made up its mind that the history of the elevated railroads in this city is of a very scandalous character, but it has never shown a very angry feeling against the operators who have created the scandal; and it is to be feared that the *Times's* "Chapter of Manhattan" will not excite that active indignation which it really merits. The *Times* arraigns not only Jay Gould, Cyrus Field, and Russell Sage, but ex-Judge Dillon, Mr. Hopkins, Mr. Ward (the Attorney-General), and Judge Westbrook, to say nothing of "the daily sheet belonging to Jay Gould, and making pretensions to influence as a newspaper"—in other words, the *World*. The entire "chapter" is too long and complicated for any rival historian, except one of those employed on a daily sheet owned by Jay Gould, to go into in all its details, and indeed some of them have made their way into print piecemeal already. The person most seriously compromised in the eye of the law seems after all to be not a monopolist but a judge. The monopolists have acquired the knack of doing the most outrageous things without exposing themselves to punishment; but a Judge of the Supreme Court cannot hold chambers or grant orders in the private offices of a man like Jay Gould, as the *Times* distinctly charges that Judge Westbrook has done on two distinct occasions, without serious risk. The charges of the *Times* against both the Judge and the Attorney-General are too serious to be passed over by them in silence.

Booth's Theatre was sold on Thursday for about a third of its original cost, and this is said to mean its final extinction as a theatre, and the conversion of the property to business purposes. The story of the building as a theatrical venture is a very old one. An enthusiastic manager, with a hobby for elevating the drama, conceives the idea that money can be made by doing it—the fact being that theatrical reform has never been, and can never be, made to pay the rate of profit which theatrical business risks make necessary. There is no business more speculative, and none, consequently, in which, to get money, it is more necessary for the manager to make it his first object to find out not what the public ought to like, but what it does like. To make a theatre the means of educating the popular taste is indeed possible; but only on the conditions which are recognized in other countries—that money must be sacrificed for the purpose. Whether the state gives it, or a private patron, does not make any difference, except that the resources of the former are practically inexhaustible, while those of the latter are not. Mr. Booth built one of the best theatres in the world, and spared no expense in adapting it to the great Shaksperian revival in which he has played such a conspicuous part, and threw good money after bad until all was gone. But the public would not do their part. They liked the idea of theatrical elevation and improvement, but for amusement they liked something else. And so the Shaksperian revival and the theatre and Mr. Booth all failed lamentably, and "dry goods" will soon pervade a locality solemnly dedicated only a few short years ago to the cause of dramatic reform.

The brigand Randazzo, or Esposito, has been found guilty of murder, presumably in the first degree, but, on account of "extenuating circumstances," has been sentenced to penal servitude for life. This disposes of the question of his return to this country by Italy. Whatever the State Department might do if his identity were still in dispute, it is not likely to take much trouble about rectifying irregularities in the method of his extradition now that he has turned out to be the man really "wanted" by the Italian police, and not an innocent New Orleans fruit-seller. Nevertheless, we trust that Messrs. Shipman and Choate will press their demand for an investigation by the Senate, for the case reveals a condition of the law which is likely hereafter to lead to great abuses. It is difficult, by the way, to guess what the "extenuating circumstances" shown on the trial can be. If Randazzo's whole career was gone into on the trial as it was in the extradition papers, his crimes were all aggravated rather than extenuated by the circumstances that attended them; unless, indeed, Sicilian common law still regards the occupation of highway robbery as extenuating occasional mutilation and murder.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

SPEAKER KEIFER announced the committees of the House of Representatives on Wednesday. The principal chairmen are as follows: Ways and Means, Kelley, of Pennsylvania; Banking and Currency, Crapo, of Massachusetts; Appropriations, Hiscock, of New York; Elections, Calkins, of Indiana; Judiciary, Reed, of Maine; Coinage, Weights and Measures, Fisher, of Pennsylvania; Pacific Railroads, Hazleton, of Wisconsin; Foreign Affairs, Williams, of Wisconsin; Expenditures of the Navy Department, Robeson, of New Jersey; Reform in the Civil Service, Orth, of Indiana. As usual, the selections have given a good deal of dissatisfaction, the Democrats especially complaining that their leading men have not been justly treated. Mr. Keifer has introduced a new precedent by giving the Democrats—the party in the minority—a majority of one committee—that on Public Expenditures—and making ex-Speaker Randall its chairman. It is said that two new and important committees will be formed after the holiday recess; that one of them will have charge of the Panama Canal question, and that Mr. Kasson, of Iowa, will be its chairman.

It is said that the Morrill Tariff Commission Bill is not so strong as the vote of the Senate Finance Committee in favor of reporting it would indicate, several members of the committee who oppose it voting to report it in order to bring it up for discussion.

The House Committee on Elections is preparing to give speedy hearings in all the contested-election cases. The committee has been divided into three sub-committees, and seven cases have been referred to each of these.

Postmaster-General James having written to Mr. George Bliss, urging that civil suits be begun against the members of the Star-route ring, for the recovery of their plunder, Mr. Bliss says in his reply that the civil proceedings have been delayed because of the vast amount of necessary work in preparing the criminal cases. The prosecutors, he says, are ready to issue subpœnas for sixty witnesses in regard to one of the ring "combinations," and he adds: "A good deal of progress has been made in the preparation of the criminal cases connected with the other great combinations; so much, indeed, that, so far as I can see, there is no danger that the Statute of Limitations can bar any of the cases. . . . Both civil and criminal proceedings will be pushed as rapidly as is consistent with justice to the Government and to the defendants, though it is quite possible that you will not find the progress so rapid as you desire."

Professor J. E. Hilgard has been appointed Superintendent of the Coast and Geodetic Survey.

The Guiteau trial was resumed on Wednesday. The principal testimony has been given by experts who have testified that the assassin is sane. Among these have been Dr. Worcester, of Salem, Mass., who was first called by the defence; Dr. Damon, of Auburn, N. Y.; Dr. S. H. Talcott, superintendent of the Homœopathic Asylum for the Insane, at Middletown, N. Y.; Dr. H. P. Stearns, superintendent of the Hartford (Conn.) Retreat for the Insane; Dr. J. Strong, superintendent of the Asylum for the Insane at Cleveland, Ohio; Dr. A. M. Shew, superintendent of the Hospital for the Insane at Middletown, Conn., and Dr. D. Evarts, superintendent of a private asylum for the insane in Ohio. All of these gentlemen had examined Guiteau in his cell and watched him in the court-room. Their testimony constantly excited the prisoner to outbursts of passion, in which he berated his counsel, the witnesses, and the prosecutors. He admits now that he is sane at present, but says he was insane when he shot the President. On Friday he said, as if realizing his danger: "I guess it will take an act of God to straighten this thing out, but I think it will come. I would rather have God Almighty on my side and have the whole world against me, with all Corkhill's money back of it. I will take my chance of that. I am not afraid to die. I would as lief die on the gallows as die from malaria or anything else. I shall not go till my time comes. I am happy. I sleep well, I eat well, and I feel well." At another time, addressing the jury, he said: "One of the jury has lost his wife, and I am sorry for it. I go so far as to say that one of those jurymen will get off that panel as an act of God, if I can't get justice in any other way. God knows that I would not have shot the President if he had not put it on me." On Saturday his language to the counsel for the prosecution was so abusive that Judge Cox warned him that if it was continued he (Guiteau) would be placed in the dock. On Friday morning the prisoner announced in a short speech that while Mr. Scoville was a good real-estate lawyer he knew little about criminal law, and he added: "My friend Charles H. Reed, who was for twelve years District Attorney at Chicago and a first-class lawyer, has very kindly consented to assume the charge of this case, and I introduce him to your honor, the jury, and the American people." Since that time Mr. Reed has taken a leading part in the defence. When the court was adjourned on Saturday afternoon until Tuesday, Guiteau said: "To-morrow is Christmas. I wish the Court, the jury, and the American people and everybody else a happy Christmas. I am happy." Dr. MacDonald, Superintendent of the Ward's Island (N. Y.) Insane Hospital, testified Tuesday that in his talks with Guiteau the latter had told him he expected to be acquitted on the ground of insanity, and would then be taken to an asylum. "And stay there all your life?" asked the Doctor. "Oh, no," said he. "I have been studying up the law on that subject. I shall have a commission of lunacy. They will adjudge me sane and I shall be released." Guiteau, on being asked why he published the statement regarding the progress of the trial, which was telegraphed hence to some newspapers on December 17, replied: "I need money. Business is business. I was offered a hundred dollars to make that statement for publication, and I took it. I shall be glad to furnish more of the same kind, at the price, at any time."

There is excellent authority for saying that the Court of Inquiry found Whittaker, the colored cadet, guilty of cutting his own ears.

The Virginia House of Delegates on Wednesday passed a bill removing the political disabilities of all persons incurred under the duelling laws during the last two political campaigns in that State. Among those affected are W. C. Elam, editor of the *Whig*, General W. Payne and Judge Smith, Congressman George D. Wise, Senator-elect H. H. Riddleberger, United States District Attorney L. L. Lewis, and General Peyton Wise.

The Executive Committee of the Independent Republicans of Pennsylvania has issued an address to the people of the State. While asserting that the great majority of the people of the State are Republican in their views and sympathies, it says that the fact "that their party allegiance has been weakened, and that discontent and dissatisfaction prevail" is proved by the result of the late State election, in which "over 40,000 Republicans refused their support to the party's candidate or gave it to another." Pointing out the importance of the election next year, they add: "We enjoin upon you the importance of making the next State Convention a thoroughly representative body of the Republicans of the Commonwealth. The just sense of the party demands, and has a right to demand, that the delegates shall come from the people through the legitimate local representative conventions, and that the State Convention shall be held at a time which will permit the fair, full, and deliberate expression of the party will."

A State Senate committee of Arkansas has found a deficit of $164,000 in the accounts of the present Governor, Mr. Churchill, while he was treasurer.

Gov. Long has tendered to Mr. William G. Russell, a distinguished lawyer of Boston, the position of Chief-Justice of the Supreme Court of Massachusetts, made vacant by the appointment of Judge Gray to the U. S. Supreme Court.

It is understood that the committee of the American Bar Association will, at its meeting in this city in February, adopt the plan for the relief of the United States Supreme Court which contemplates the establishment of another court to consist of fifteen judges. The justices oppose the proposed division of the present court as tending to lessen its dignity.

A census report shows that at the close of the census year in 1880 there were 515 steamers of all classes owned in the New England States, measuring 120,177.83 tons, and valued at $8,041,250. The passenger movement in 1880, amounting to 15,587,280 passengers, may be divided into 12,042,889 ferry, and 3,544,391 regular and excursion passengers. The freight traffic amounted to 2,680.874 tons. The number of lives lost by accidents was 29, of which 27 were passenger.

The Executive Committee of the Connecticut Bible Society has furnished for publication a long rejoinder to the reply of the American Bible Society to criticisms of its last annual report. Not only are the serious charges heretofore made by the Connecticut Society restated and reaffirmed, but some very severe comments are made on the method of business pursued by the American Bible Society.

The Rev. Dr. Leonard Bacon, D. D., LL.D., died suddenly in New Haven of heart disease on Saturday, aged almost eighty years. He has long been one of the leading Congregational clergymen of New England, having become pastor of the Centre Church of New Haven in 1825, and retained his active pastorate until 1866. Since the latter date he has held a professorship in the Yale Divinity School. He took an active part in the slavery discussions before the war, siding with the Colonization and later with the Free-soil advocates. He has long had a leading share in the government of Yale College. As an editor he was connected with the *Christian Spectator*, of New Haven, the *New Englander*, and the *Independent* of this city, and was the author of several books.

F. A. Palmer, City Auditor of Accounts, of Newark, N. J., delivered himself up to the warden of the county jail on Wednesday, confessing that he was a defaulter to the amount of $125,000, having lost the money in Wall Street speculations. The announcement was a complete surprise. Investigation shows that Palmer accomplished his peculations, partly at least, by forgery. On Thursday the Mayor suspended City Treasurer Winants, who confessed that he had lent Palmer money belonging to the city. The same day W. A. Hall, chief clerk in the City Comptroller's office, disappeared, and it was reported that he had fled to Canada. It is found that he has embezzled money paid in for arrears of taxes.

William V. Brown, assistant bookkeeper, and S. V. Halloway, paying teller of the Poughkeepsie (N. Y.) National Bank, are charged with a heavy embezzlement of the bank's funds. Brown was arrested and put under bonds last Wednesday, and Halloway, who has been put into a lunatic asylum by his relatives, is under close arrest.

The American committee on the Bartholdi statue, to be erected by the French people in New York Harbor, has issued an address to the American people asking them to contribute money to secure a proper pedestal to the monument. It is estimated that $250,000 will be needed for this purpose, as it is proposed to have one that will be at least 160 feet high,

the desire being to have the entire piece 300 feet in height.

The will of Samuel Wood, leaving $1,500,000 to found a free college of music in this city, having been sustained by the Surrogate, the Trustees of the College will organize this week. They want an endowment fund that will give them at least $50,000 a year income, and if Mr. Wood's gift is not sufficient for this, several wealthy gentlemen have offered to supply the deficiency. Gounod is talked of as the Director of the College.

Booth's Theatre, in this city, has been sold for $525,000, and will, after May 1, 1883, be altered for use as a dry-goods store.

Two destructive fires occurred in this city on Christmas Eve. In one, on Maiden Lane, South and De Peyster Streets, two warehouses filled with tobacco, liquors, teas, and other goods, were burned out. The loss is estimated at nearly $2,500,000. The other fire occurred in a building at No. 359 Broadway, occupied by a number of mercantile firms. The loss is about $235,000.

The disaster in Vienna has caused thorough examinations to be made of the theatres in this and some other cities, and where additional precautions were found necessary they have been ordered.

Some wealthy members of the Methodist Episcopal Church in this city have subscribed $150,000 to build a handsome church of their denomination at Madison Avenue and Sixtieth Street. The church and lot, chapel attached, will cost $225,000.

Phillips, Marshall & Co., of London, have concluded the purchase of 1,300,000 acres of land from the State of Mississippi; 767,000 acres are known as the "levee lands," and are situated mostly in the Yazoo delta, comprising some of the richest cotton and timber land in the South. The intention of the purchasers is to improve, colonize, and cultivate these lands.

While men were unloading the steamer *West Point*, at West Point, Va., on Monday, a terrible explosion, from some cause as yet unexplained, occurred on board, resulting in the death of nineteen of the men at work. The *West Point* ran up the York River from Baltimore. This was her first trip.

FOREIGN.

No further news has been heard from the crew of the *Jeannette* that is later than the report announcing the wreck of the vessel. Persons who are best acquainted with the country which the members of the expedition have reached say that they will receive only the kindest treatment, and predict that the men in the boat which has not been heard from are safe, and in good hands. The Russian Government has ordered an active search for this boat. Mr. Bennett has sent to Russia the $4,000 needed for the relief of the explorers, and the State Department has telegraphed to St. Petersburg orders that every assistance be extended them. Mr. George Kennan, a well-known writer, who has travelled widely in northeastern Asia, says the wrecked explorers may return home by either of the following routes: First, they may go overland to St. Petersburg by the Imperial Russian Post by way of Irkutsk, Tomsk, Omsk, Ekaterineburg, and Moscow. Second, they may be sent eastward across the Stanovoi Mountains on reindeer sledges to the seaport of Okhotsk, on the Okhotsk Sea, and be there called for next summer by a vessel from America. Third, they may go up the Lena River by post this winter, or by steamer in the spring, and thence by post or steamer down the Amoor to Nikolaievsk, where they may be called for, as soon as navigation opens in the summer by one of our ships from the Asiatic station. Mr. P. M. D. Collins, who was employed in telegraph building in Siberia in 1865, says their best route will be by way of Moscow; that they will travel comfortably in sledges at the rate of 130 miles a day, and that the kindest hospitality will be extended to them.

Mr. Leigh Smith, an Englishman, started to explore Franz Josef Land in his yacht, the *Eira*, last summer, and had no intention of wintering in the Arctic. Fears have been entertained for his safety, and relief measures have been proposed in England. Now, however, a Norwegian whaler reports seeing the *Eira* on July 2, steaming southward, and he feels certain that Mr. Smith has reached Franz Josef Land, and that he may have been able to push still nearer to the Pole. The English Admiralty has decided to send a vessel in search of Mr. Smith next spring.

The fate of the overdue steamer *City of Bath*, from Bristol to this city, was made known on Wednesday by the arrival of seventeen of her crew at Liverpool. The steamer sprang aleak off Newfoundland and sank, and the crew took to two boats. One of the boats capsized, and the captain and four of the crew were drowned. The others were picked up by a bark and taken to Liverpool.

Mr. William Shaw, member of Parliament for Cork County, Ireland, has written a letter giving his reasons for withdrawing from the League. He thinks the League as now constituted is unfitted to act effectively, and he does not sympathize with its apparent aims. The only solution of the Irish difficulty will be, he thinks, a measure of federalism, with which, he maintains, leading statesmen will be prepared to deal in a generous manner when the state of the public feeling permits the question to be approached. Miss Reynolds, of the Ladies' Land League, charged with abetting a criminal conspiracy to prevent payment of rent, was ordered either to find bail to keep the peace for six months or undergo a month's imprisonment. She refused to give bail, and went to jail. Mr. Pigott, former proprietor of the Dublin *Irishman*, publishes a letter saying he believes that Fenianism is practically extinct in America and in Ireland, and nearly so in Great Britain; that the "no-rent" manifesto has caused such a run upon the resources of the Land League that they must soon be exhausted; and that probably a general adoption of the "no-rent" policy will lead to such exasperation that there will be organized attacks on the military and police, which attacks can be effectually stamped out, and the League with them. The "suspect" Moore has been released from Kilmainham prison on condition of his emigrating. Mr. Stenson, late editor of the Boyle *Herald* and formerly secretary to Mr. Sexton, has been arrested at Sligo, under the Coercion Act, and conveyed to Galway. The *Pall Mall Gazette* believes it to be substantially true that the Government has divided the disturbed localities of Ireland into five or six districts, each of which is to be under a superior sort of magistrate, who will be able to act without previous superior sanction, and have entire control of the troops and police, with a view to prompt action in the event of disturbance. The *Gazette* adds that possibly this is a preliminary step toward the enforcement of the payment of rent.

At a meeting of the Prussian Cabinet on Friday, Prince Bismarck presiding, the principles of the bill for a revision of the May laws were agreed to. The bill, while removing the more stringent provisions, leaves many safeguards for the authority of the state.

It is announced that the Austro-Hungarian Lloyd will start direct steamship communication with the United States and Brazil. The first steamer will sail on the 25th of January for New York, and the second, for Brazil, in February.

The corrected list of victims of the theatre fire at Vienna reduces the number to 449. Increased precautions in regard to the safety of theatres have been ordered in different European cities. The German Minister of the Interior has approved stringent rules for this purpose. The dramatic critics of London have formally condemned the unsafe condition of the theatres in that city, and passed resolutions urging the appointment of a Government officer who shall be held responsible for their safety.

During the celebration of High Mass in a church in Warsaw, Russia, on Sunday, an arrested pickpocket, in order to escape, cried, "Fire!" This caused a panic, in which thirty persons were fatally injured and many others injured less seriously. The culprit being a Jew, much feeling exists against his coreligionists. Shops have been gutted and the military have been called out.

In the trial by court martial at Miejin, Russia, of persons who participated in the anti-Jewish riots last August, among the prisoners are some wealthy merchants accused of inciting the mob.

Another plot to kill the Czar has been discovered. Had he passed through a certain street as expected, nothing, it is said, would have saved him.

At a meeting of bankers and merchants in London on Thursday, a resolution was passed in favor of the formation of an association to consider the rehabilitation of silver, and Mr. H. H. Gibbs, a director of the Bank of England, was chosen president of the council.

The death is announced of John Ludwig Kraff, the African explorer and missionary, and of Grenville Murray, journalist, and author of 'The Member for Paris' and 'Side Lights on English Society.'

The troops despatched by the Emperor of Morocco to capture Chief Bou Amena have joined the latter in proclaiming a holy war against the French in Algiers and Morocco, and have defeated the tribes who refused to join them. The revolt is spreading.

Three of the large tribes in the southern part of Tunis hold out against the French.

The Italian Senate has adopted the whole Reform Bill, including the clause giving the right to vote to all who can read and write.

Esposito, the Italian brigand, who was arrested in this country, has been found guilty at Palermo, Italy, but in consequence of extenuating circumstances in regard to the murder with which he was charged he has been sentenced to life servitude.

Mount Vesuvius is in a state of increasing eruption.

The Pope, in his address to the Cardinals at his Christmas-eve reception, said that his position was becoming more and more intolerable; when he claimed temporal power, in order to secure independence of spiritual power, he was accused of being a rebel and an enemy to Italy. He expects still greater persecutions to come.

Mr. O'Donovan, the correspondent of the London *Daily News*, who recently arrived at Constantinople from Merv, where he had been in prison, was arrested on Wednesday on the charge of publicly insulting the Sultan, and sentenced to six months' imprisonment. He has, however, been pardoned.

The Japanese Government is about to establish a Central Bank, with a capital of $20,000,000, in order to render the Government independent of foreign banks, and to encourage direct trade.

There has been a rumor in South America that the United States steamer *Alaska* has been fired into and damaged so seriously that she had to return to Callao for repairs. This report is not credited at Washington.

The Canadian authorities have seized a number of cars and some other property belonging to the Pullman Palace Car Company, alleging that the company sends Canadian-built cars into the United States for furnishing and repairs and then uses them in the Dominion without payment of duty. The claim against the company is for $160,000.

THE NEXT STAGE OF THE ADMINISTRATION.

EVERY Administration has its honeymoon. It is that period at its beginning when everybody is disposed to put the most favorable construction upon all its acts, and when enthusiastic newspaper writers decorate it with all sorts of superior faculties and statesmanlike purposes. This is largely owing to the good nature of the American people, as well as to the honorable desire of every just man that those who have a difficult task before them should also have a fair chance and a pleasant start. This sentiment is so general that even those who cherish feelings unfriendly to the Administration will, during that period, be careful to restrain the manifestation of their hostility. But this honeymoon seldom lasts very long. It is apt to wane as soon as any of the public expectations excited by premature and unreasonable enthusiasm are disappointed ; and criticism, fair and unfair, then emerges with a sharpness proportioned to the restraint which it has endured. President Arthur has gone through the first period, and is now about entering upon the second. He has hitherto had the advantage of doing better than his opponents predicted he would do, disappointing evil anticipations. The standard by which he has been judged was not a very high one, and it was comparatively easy to come up to it, or even to rise above it. But the credit thus gained has induced his friends to indulge in glowing predictions as to his future achievements, and consequently the standard will now be much higher and far more difficult to reach.

No reasonable man in the Presidential office will permit the good-natured confidence offered to the Administration during its honeymoon to delude him into the belief that, whatever he may do, he will always have the approval of the public. The manner in which President Arthur's official acts have been received is in this respect significant and instructive. His message was greeted with general applause, which seems to indicate that on matters of public policy, so far as he has pronounced himself upon them, there is no vital disagreement between him and the majority of the people, especially if what he said about our foreign relations and about the civil service is construed in a sense favorable to peace and to reform. But it is in the matter of appointments to office that trouble is looked for, and it is characteristic of our wretched service system that it should be so. President Arthur has made four appointments of Cabinet officers, and the criticism passed upon them—a criticism made, on the whole, in a very friendly spirit—points out clearly the direction in which the trouble lies. When the President had filled the departments of the Treasury, of State, and of Justice with new men, it was remarked that they were all from the same wing of the party, and that wing a minority. But while this seemed of doubtful propriety from the point of view of party politics, public opinion was evidently willing to take into account the fact that Mr. Folger was a prominent jurist, of recognized business capacity, that Mr. Frelinghuysen was a public man of large experience and a conservative spirit, likely to take us safely through the muddles in which we have recently become involved, and that Mr. Brewster was a lawyer of high standing, who could be counted upon to push the prosecution of the Star-route and other frauds with vigor, and that therefore for these appointments other reasons might be produced than mere partisan preference. Strikingly different was the expression of public judgment when, in the Post-office Department, the place of a public officer who had achieved remarkable success through strict business methods, was filled with a gentleman for whose appointment no reason could be given but the desire of the President to revitalize a third-term partisan, who had been defeated by the people of his own State just on account of such partisanship. It can scarcely have escaped the President's attention how sharply that selection was criticised by a large majority of the Republican press. The lesson to be drawn from this significant fact is, that while there are many citizens who care very little from what party or faction a man be taken to do a certain business, provided he be well qualified for doing it, even partisans will express their dissatisfaction when men are selected for the performance of important public duties for merely partisan reasons, without any regard to their business qualifications.

It is a matter of history that the principal troubles of Administrations have been about the offices, and that their greatest failures and most stinging disappointments have been caused by attempts on their part to accomplish political objects by means of the patronage. Nothing could be more instructive in this respect than the Administrations of Mr. Buchanan and General Grant. If, as is thought by some of President Arthur's friends as well as some of his opponents, it is his purpose to turn the old third-term or "Stalwart" faction, which now forms only a small minority of the party, into a majority, or to subjugate the majority to it by giving it all the offices, it requires no gift of prophecy to predict that he will wretchedly fail in his purpose and wreck his Administration upon that very point. The only safe course for any Administration under the present state of public sentiment is to treat the offices of the Government as places of work, trust, and responsibility, and to select for each one the best man available, in whatever party or faction he may be found. As experience, recent as well as remote, shows, Administrations will impair their general success in the measure in which they depart from that principle.

THE RAILROAD WAR.

THE railroad war, after much shuffling and negotiation, has been renewed with extreme bitterness. It would, perhaps, be more proper to say that it has never been discontinued since it broke out last summer. For the first time since railways began to compete with water lines in the carriage of heavy goods, the closing of lake and canal navigation has had no effect to advance rates. It is reported that grain is now taken from Chicago to New York at ten cents per hundred pounds, or a trifle more than one-fifth of a cent per ton per mile. According to all estimates of actual cost of handling, this rate must involve a considerable loss to the carriers, so that the more business a railroad company does at this price the less money it will have. The most commonly accepted estimate of actual cost of hauling for that distance is one half cent per ton per mile. That is to say, if a railroad charges that rate it will receive only as much money as it pays out in doing the business. The economies applied to railway transportation as now conducted on the east-and-west trunk lines would have been considered simply fabulous twenty years ago, when the cost of the cheapest known mode of transportation—that of long ocean voyages in sailing ships—was estimated by good authority at one half cent per ton per mile, while the minimum cost by railway was supposed to be three times as much.

The war of rates is no longer confined to the railroad companies themselves. It has been transferred to the commercial bodies of New York, Philadelphia, and Baltimore, all of which have held meetings and passed resolutions sustaining the action of the railways terminating at those cities respectively. The New York merchants sustain Mr. Vanderbilt in insisting on an equal rate on east-bound products for this city, notwithstanding its somewhat greater distance from the principal shipping points in the West. The Philadelphia and Baltimore merchants sustain Mr. Roberts and Mr. Garrett in insisting on differential rates for those cities, on account of their natural advantages as regards distance and fuel. The New Yorkers would show egregious folly if they did not give their hearty support to any railroad policy calculated to throw additional trade into their laps without cost to themselves. The men of Philadelphia and Baltimore would be equally shortsighted if they did not "rally" to the support of differential rates. Finally, the West cannot be otherwise than favorable to any policy or conflict of policies which keeps rates at or below the actual cost of hauling their products to the seaboard. The expenses of the war must be paid by somebody, of course. They are in fact paid partly by the railway shareholders and partly by the local traffic. The recent reports of the New York Central, Lake Shore, and Canada Southern roads show a large decrease in earnings on a considerable increase of business. The New York Central and Lake Shore seem to be still earning fair dividends, but this result, if actually attained, is attained only by discriminating against local and non-competing points, charging them higher rates relatively if not actually than the more distant places where competition is keen. Thus the railroad war has tended and now tends to equalize the money value of farms hundreds or even thousands of miles apart, taking away the advantages of some as regards nearness of market and adding to those of others. This process has been going on with increasing force for thirty years, and its operation is felt by landowners in Great Britain perhaps even more severely than by any in our own country.

What is the cause of this railroad war, unexampled in point of severity and duration in the history of such contests? Many an-

swers to this question have been offered by the railroad men themselves—answers contradictory and even self-contradictory. The true answer must be one sufficient to account for the voluntarily incurred loss of millions of dollars by men whose sole purpose in life is to make money. Tenderness for the city of New York is not to be accounted a sufficient reason for Mr. Vanderbilt's stubborn persistence in the war of rates. Nor is it by any means apparent that if he could break down the principle of differential rates, the net result would repay him for the outlay. The most obvious reason for the beginning and continuance of the war is to be found in the fact that new lines of railway parallel with the New York Central and Lake Shore, extending from Jersey City, by way of Albany, Buffalo, and Cleveland, to Chicago, and running for long distances within a stone's throw of the old lines, are now in course of construction. These new lines are the New York, West Shore, and Buffalo, and the New York, Chicago, and St. Louis. It is said that the money required to finish them has already been obtained, and hence it is idle for Mr. Vanderbilt to expect to stop them by any possible reduction of rates. It is said, also, that if Mr. Vanderbilt had intended to "freeze them out," he would have begun before the money had been so largely subscribed and paid in, and, by putting rates down to a non-paying point, have frightened the subscribers out of the field. Possibly he desired them to build a road which should eventually fall into his hands at low figures. Possibly he did not determine in his own mind until midsummer of the present year that war to the knife was necessary to meet this new competition, the most formidable that has ever been offered to the lines under his control. However this may be, we can see no sufficient reason for the war except the threatened competition of these new roads.

If this be the true reason, it must be admitted that competition—the competition of an uncompleted line—has wrought reductions in freight and passenger rates, at least on through-business, which the wildest dreams of the anti-monopoly league had never pictured. It may be said that these reductions are not permanent, and probably they are not. No reduction can be permanent which puts the price of an article below first cost. But it will be impossible for the railroads, after teaching the lesson of low rates to the public, and after demonstrating that they can live under such rates, to go back to their former charges—to the *status quo ante bellum*. The permanent rates must be something lower than the old ones, and thus the public will be the gainers in the long run as they are indubitably the gainers now. It is impossible for the Vanderbilt lines, or for all the old lines together, to put a limit to railroad construction when the increase of business calls for it. The growth of railways will keep pace with the growth of the country in spite of them, and is more likely to outrun than fall short of the public needs. Present as well as past experience teaches that the interests involved in the east-and-west trunk lines, at all events, are too unwieldy, diverse, and conflicting to be combined together in such manner as to circumvent the law of competition for any great length of time; for whenever the profits of the old lines rise above a certain point new capital is tempted into the field.

THE PROTECTION OF CHILD PERFORMERS.

The case of the child Corinne, which has just come to an end, was not merely a dispute over the interpretation of local statutes, but presented some questions of general interest as well. The child, who is about ten years of age, was brought to New York by her guardians—she has no father or mother—to take part in some operatic performances. She and her guardians all live in Massachusetts. On her arrival in New York, the Society for the Prevention of Cruelty to Children had her brought before Judge Donohue, on a charge of cruelty, asking that a new guardian be appointed, and that she be meanwhile handed over to the Society to be taken care of. There was no evidence of cruelty, and it was soon apparent that this was not the proper place to inquire into the guardianship of the child, as her existing guardians lived in another State, where all the evidence on the subject of their character and responsibility was to be found. It was a question for the courts of Massachusetts to decide, if it was to be gone into at all. Meanwhile the child became greatly alarmed and distressed at the prospect of protection held out by the benevolent philanthropists who had undertaken the case, and to secure her against any more protection she was carried off to New Jersey, upon which the judge got very angry, compared the case to that of Guiteau, and imposed bail upon the guardian who was supposed to have had a hand in the escape, in the enormous sum of $10,000. This of course led to the return of the child, upon which the judge became much calmer and heard the case. No testimony to show cruelty was introduced, it being proved, on the contrary, that she was maintained in great comfort and luxury, with a complete establishment, including a maid, a footman, carriage and horses, etc.; but a curious and novel attempt was made to establish the fact that her guardians were sacrificing her moral and spiritual capacities to the development of her vocal organs. She was made to say her prayers in court, and the examination practically covered the whole ground of her education. Finally, the charge of cruelty was dismissed, and she was released.

The case took a new turn on Friday last in the production of the child before the Mayor by counsel, who asked that she might be permitted to sing in opera in this city. The child, as we have said, earns her living by singing songs from popular operas of the day, and was brought to New York for the purpose of enabling her to do this at the Metropolitan Casino. She was advertised to appear there, but the proceedings set on foot by the Society for the Prevention of Cruelty prevented it, and Judge Donohue, in giving his final decision in the case, showed that the statute with regard to children expressly prohibited even performances of this kind, and consequently he required bail that the statute would not be violated.

The statute provides that:

"Any person having the care, custody, or control of any child under the age of sixteen years, who shall exhibit, use, or employ, or who shall in any manner, or under any pretence, sell, apprentice, give away, let out, . . . for the vocation . . . of singing, playing on musical instruments, rope or wire-walking, dancing, begging, or peddling, or as a gymnast, contortionist, rider, or acrobat, in any place whatsoever; or for or in any obscene, indecent, or immoral purpose, exhibition, or practice whatsoever, . . . shall be guilty of a misdemeanor."

And, whenever this statute is violated, it is the duty of the Society to bring such violation to the attention of the court, and ask that it be punished, and, if the case demands it, that the child be taken from the custody of those violating the law and placed where she will be protected.

This law practically prevents any child from singing in public, and that there was any such statute in existence was probably news to nine-tenths of the people who read Judge Donohue's opinion, particularly to those who, being in the habit of going to the theatre and opera, know that there is never a time in the year when some performance is not going on with a child or a troupe of children singing every night to admiring audiences, and without the slightest attempt at prevention being made. The explanation, it seems, is, that under the law the Mayor can license the musical performances which the statute forbids, and Mayor Grace decided under this on Friday that Corinne could sing, but could not be allowed to dance.

Taking all these proceedings together, it must be said that they show the law of this State on the subject to be in a very unsatisfactory condition. All laws for the protection of children must proceed on general principles which can be laid down in advance, and which can be enforced simply and readily by the courts. Actual cruelty to children can be prevented by a society like Mr. Gerry's, because cruelty is a fact which can be proved, like any other, by means of human testimony. There are various ways of employing young children for the public amusement, involving either excessive physical strain or exposure, which everybody knows are cruel and barbarous, and against which children can be protected just as they are against being engaged in unhealthy employments. Statutes for this purpose will probably always need an organized philanthropic society to enforce them. But when we find a law to prevent children from singing in public ameliorated by a provision that the Mayor may license them to sing in public, we get into a very different statutory region. The dispute that has been going on over Corinne has really been not a discussion about cruelty, but about the child's education. There never was any evidence of cruelty in the case; but the question was whether on the whole it was a good thing for her spiritual and moral welfare to earn money by singing songs from "Olivette" and "Pinafore" on a public stage. For the purpose of deciding this the State has provided a process which calls for the services of a Judge of the Supreme Court, four or five members of the bar, an incorporated society, and finally the Mayor of New York, and the result of the whole is that the matter is left just where nature and the circumstances of the case originally placed it, in

the hands of the guardians who have brought the child up. To attain this result many thousand dollars have been expended, much valuable time has been wasted, and a good deal of actual suffering has been inflicted upon the child herself.

Of course, if it were a well-established fact that no child of tender years could sing in public without injury, the whole thing ought to be prevented; but the discretion given to the Mayor shows that the Legislature never meant anything of this kind. But why should the discretion be vested in the Mayor? The enforcement of the statute is placed in the hands of the judge who hears all the evidence as to the child's physical condition, circumstances in life, etc. All these facts being within his knowledge, why should the Mayor be called in to hear the case all over again? The Mayor is not in virtue of his office a general protector or guardian of children; in fact, there is nothing more disconnected with the usual course of his duties. His licensing power in the case of public performances is based on the idea that he ought to have a police supervision of the character of the performances themselves, in their relations to the public as public exhibitions; not that he is a proper person to ascertain whether the performances are injurious to the moral and spiritual future of the performers.

But the statute ought to be confined to the original purpose which all such statutes are designed to further—the prevention of actual cruelty. Cases may of course arise in which making a child sing in public does involve actual cruelty, and then it ought to be stopped; but when, as in the majority of instances, it simply involves the question of the best way of bringing up the child, and the injurious effect upon its moral and spiritual future which theatrical training may have, mayors and judges and incorporated societies are not good agencies to provide for determining so delicate a matter. As long as the theatre continues to exist, some children will be fitted for theatrical life, of one kind or another, at a very early age. The determination of the question as to what children are fitted for this sort of life, and how early they shall begin it, can best be left where nature has left it, with their parents or guardians. What society can do is to protect the child against actual cruelty in the process. It can use all its moral agencies also to discourage exhibitions of children which have even a remotely demoralizing tendency. But beyond this it can hardly go with advantage.

BISMARCK, THE POPE, AND ITALY.

BERLIN, December 7.

THE proceedings of the Reichstag during the last week have thrown much new light upon our foreign policy, the present aims of the Chancellor, and the mutual relations of the political parties. Bismarck, on four succeeding days—viz., from November 28 to December 1 inst., made about half a dozen speeches, in which, although on the one hand he repeated himself over and over again, nevertheless, on the other, he developed some new and interesting points of view. I have seldom seen him so full of vitality and aggressive spirit. He fought in partly humorous, partly exasperated mood, and in the debate bore the brunt of the battle. While he was present none of his subordinates and assistants dared to utter a syllable; they obey him implicitly, and are proud of serving as his tools. The Chancellor is not a fluent speaker, and not at all an orator; but he always hits the point with a happy remark, a sharp word, and a significant jest. I have never seen a leading Minister who personally exposed himself so recklessly, and this often conciliates even his bitterest opponents.

"It is true," he said the other day, "that I may often have talked nonsense and still talk nonsense. I am even ashamed of myself when I make long speeches, thus taking up your time and my own, but I am bound to do so, as I have to defend my position and my budget. Keep to my measures and not to my words. What a blessing it is for you, gentlemen, that my person can always serve for your attacks! Suppose that some fine morning I should disappear through a trap-door. What would become of you if, the butt being gone, you could only rid yourselves of your bad humor by firing at each other?"

Notwithstanding these semi-humorous, semi-serious, and earnest appeals, Bismarck did not carry his point. He suffered his first defeat in the present session: his plan for the "Volkswirthschaftsrath" (*Conseil Supérieur*) was rejected by 169 to 83 votes. He had expected a larger minority, and was greatly incensed at losing his pet measure by two to one.

On the other hand, however, his statements about his relations to Rome and to the party of the Centre created a very painful sensation, which alienated even those of his admirers who had still considered it possible and expedient to submit to the Chancellor's dictates. He openly declared that he preferred an alliance with the Centre to one with the Liberals. This declaration proves that Bismarck is ready to pay the highest price for a peace with Rome, hoping to obtain in reward for his advances the assent of the Centre to his social and economical schemes. Thus he has put his seal on a Clerico-Conservative alliance. It is not quite a year ago since he declared that if confronted with such an eventuality, he would rather leave the management of public affairs to other hands. This assertion of the Chancellor, that the Centre can never become so dangerous to the Government as the Liberals, again proves how readily the most formidable lessons of history are put aside when it is inexpedient to remember them. Bismarck covers this change of principle by likening it to a mere strategic movement, and adds that to ask of him an invariable mode of procedure would be just as foolish as to demand that his venerable friend Moltke should fight the battle of Sedan with the same manœuvres as that of Mars-la-Tour.

This declaration has destroyed the last remnant of illusion among the Liberals, and has had the effect of uniting them into one resolute body for the defence of popular rights. Since Bismarck's speech of November 29 the subordinate differences hitherto separating the Progressists, the Liberals, and the National Liberals have disappeared. We have thus got at last a great Liberal party which offers a united front against all encroachments on popular liberties. There is no reason to doubt a permanent success. The middle parties, having been broken to pieces, have to look out for new affinities, and there will in future be only a Liberal and a Conservative party. For the present the united Liberals are preparing new laws for the insurance of workingmen against accidents, sickness, and old age, and in all other respects, too, they will agree on new bills to be submitted to, and their policy to be followed in, the Reichstag.

You will probably remember that, on September 7, I informed you that the Pope had asked the good offices of Bismarck to place him under European instead of Italian protection, and to recover his temporal power—the initiatory steps for which date back to last summer, when the well-calculated scandals on the removal of the corpse of Pio IX. were made a pretext for opening hostilities against the Italian kingdom. At that time Malta was mentioned as the future seat of the Pope. What a few months ago was a mere rumor has lately gained consistency, and what was then considered a mere feeler now turns out to be a deliberate plan for the re-establishment of the Pope's secular power. Moreover, Bismarck seems to have suggested to Leo XIII. the old bishopric of St. Boniface, the Prussian town of Fulda, as a proper place for his residence. When this rumor first became known, toward the end of October, it was laughed at as impossible. I did not believe it when I first heard of it, and therefore did not mention it in my letters to you, but lately it has been affirmed as a fact by trustworthy authorities, and Bismarck did not deny it in his last great speech of November 29. For all these reasons, although I am not prepared to say that Fulda will be the future residence of the Pope, I can almost positively assert that as such it has been recommended to him.

The Pope, too, has lately more openly revealed his plans. In an audience granted on the 16th of October to Italian pilgrims, he complained that some ill-disposed people had laid hands on his holy person, and that it seemed to him as if they wished to drive him into exile. All Italians, he added, were bound to protect the Pope, who was surrounded by enemies, and even threatened by the Italian King, whose dynasty ought to be abandoned to its well-deserved fate. But what is more remarkable, Bismarck's officious organ, the *Post*, agrees with Leo XIII. that his situation in Rome is untenable.

"Where the pontificate," it says, in criticising a little French pamphlet published by order of the Pope and called 'La situation du Pape et le dernier mot sur la question romaine' (which, it remarks, is a pretty irrefutable proof of the Pope's claims), "cannot display its solemn pomp, the symbols of that godlike rule the bearer of which on earth is the Pope for Roman Catholics, it needs a pious and faithful multitude and the sovereign disposal of that absolute power which alone can keep off all malignant and reckless disturbers. This desideratum can never be reached in the Rome of the King of Italy. It might perhaps be realized if the monarchy would consider itself dependent on the Pope, and treat him as the only spiritual power. In that capital, however, which, according to the Catholic faith, the prince of apostles bestowed on the Pope, the latter cannot be satisfied to live side by side with infidels of all kinds, with Jews and atheists [and, of course, Protestants]. He who believes that to be possible has no appreciation of historical facts."

The aim for which he should strive is, in the eyes of the *Post*, the reëstablishment of his temporal power in Rome:

"In order to get absolute possession of it, he has a most powerful weapon in voluntary exile. It is a shallow thing to say that the Pope is not the highest dignitary of the Church when not in Rome. On the contrary, he is in every other place more Pope than in Rome, where he is only a subject. Exile, however, would be much more than a temporary delivery from an intolerable situation; it would be a weapon for the destruction of the Italian monarchy. The hostility between the priesthood, whose head was in exile, and the state, which had exiled it, would break out in open flames. The radicals would urge the annihilation of the priesthood, and the atheistic republic would raise its head. In Italy republicans and free-thinkers are inseparable; while Roman Catholicism is after all the pillar and embodiment of everything that is sound and respectable in the Italian monarchy. The radical republic in Italy would be the transition to a restoration, and perhaps lead to a great war, if another republic [France] should support the Italian republic and at the same time subject it to its rule. The Pontificate, therefore, is not without efficient arms; in its exile it possesses a powerful weapon, which can ultimately destroy the Italian monarchy. After its restoration, however, the Pope can hope soon to be called back to Rome, where he will find himself in a much better condition than at present."

Now compare with these words Bismarck's remarks made on November 29 in the Reichstag. After having announced that, for the purpose of facilitating business of a merely political character, the appointment and the salary of a Prussian Minister to Rome would be laid before the next Landtag, and after having passed unnoticed the alleged offer of a German residence to the self-exiled Pope, he continued in relation to Italy in the following words:

"The last speaker [Professor Virchow] has declared those prophecies false—namely, that the more political aspirations and tendencies glide to the Left, the more monarchical governments are driven into the republican pathway. . . . In France it was the Girondists who drove the state carriage to the verge of the abyss, although they expected to further the constitutional development in that liberal and humane sense which may float before the speaker's mind; but these same men always ultimately go beyond their original limits. Liberalism always goes further than its supporters wish to go. You cannot, *ad libitum*, stop the momentum of forty millions of people you have once put in motion. Thus it happened in France. Did not, in the hands of the extreme constitutional Left, an old and hereditary monarchical government glide down into the republican path? . . . Take Italy as another instance. There we have seen, temporarily, at least, and partially, a republic, as to which I do not know whether it was created in concert with the whole people. At all events, it haunts many minds which are decidedly ahead of German progress. Can you take upon yourselves any guarantee for the future, especially if God should not keep alive the dynasty, which rests upon a few individuals? Are you sure that the prophecies which the speaker has declared false would not be realized in Italy? Is the road which Italy has travelled for the last twenty years not discernible, and is not the terminus discernible, although I will not say that she will reach it? Has not, one cabinet after another, the centre of gravity glided more to the Left, so that without falling into the republican range it cannot glide more to the Left?"

Without discussing the historical and logical merits of the Chancellor's statements and deductions, I am at a loss to find an explanation for this underhanded attack on the present Italian Government if it is not to please the Papal See, which long ago forfeited its claims to political existence, and as a worldly power is an anachronism and absurdity. What interest have we Germans in offending a friendly power, which was just about to ally itself more closely with Germany and Austria, and which now will be drawn into the arms of France? As a reporter on German politics, I need not dwell on the consternation and irritation which Bismarck's declarations have caused in Italy. I can only say that if he wishes to maintain German unity, he must first respect Italian unity. † † †

A PRESS TRIAL IN ROME.

ROME, December 1, 1881.

YOUR readers will remember the affair of the 13th of July, when the remains of Pio Nono were transported from the Vatican to their final resting-place in the Church of San Lorenzo, escorted by a torch-light procession of all the "blacks" in the city of Rome, some of whom were hissed and even stoned by the Roman plebs. It was known that Leo XIII. had deprecated any such demonstration, but as usual he was overruled, and was exceedingly edified afterward by the effect produced by the sensational letters of the *Times* correspondent, who of late has taken a most devotional turn. This was fresh capital for the Ultramontanes, espe ially as the Ministry arrested and punished the ringleaders of the counter demonstration; whereupon commenced a series of public meetings for the abolition of the Law of Guarantees, promoted by the Mazzinian radicals, whose ideal is a unitarian republic, and by the Federalists, whose ideal, on the contrary, is a republic modelled like that of the United States of America. The Liberals of all shades of opinion adhered to the programme on the ground that, as the Pope had refused to avail himself of the guarantees, and in his late speeches to the press and to the pilgrims had hurled as much contumely against the new kingdom as Pio Nono himself, and as by his constant appeals to foreign nations for succor his existence as a recognized and inviolable sovereign is a constant menace to Italy, it is indecorous for an Italian Liberal Government to continue the application of the said laws.

One of these meetings was held in Rome and suspended by the police. One of the chief speakers, Alberto Mario, was put on his trial for having called the Pope "Mr. Pecci," and for offering a resolution that "the Government should take possession of the Apostolic palaces." Signor Mario has been for the last two years editor of the Republican Federalistic paper, the *Lega della Democrazia*, which advocates its doctrines openly, but insists that as monarchy was installed by the will of the nation, no violence must be used in substituting a republic; that indeed no violence is necessary—that the dynasty, having no root in the hearts of the nation, will quietly disappear. Evolution instead of revolution, in short, is the motto of the writers. For the first eighteen months of its existence the paper was never once sequestrated, partly because of the moderate form in which the most radical doctrines were expounded, and also because the royal procurator seemed to be of opinion that press trials only serve to give publicity to writings which otherwise would be confined to a comparatively small audience. About six months since the very zealous procurator Lavini was officially installed in Rome, and at the very commencement of his career appeared in the *Lega* an article alluding to the possible return of the Conservatives as a piece of impolicy that would act as a "box of dynamite under the royal throne." Lavini took the words in their literal sense, seized the paper, and indicted the writer for incitement to the violent destruction of the reigning dynasty. The shouts of derision with which his act was received by no means increased his love for the *Lega* or its editor, and for some months he went on recklessly sequestrating the paper for pretended insults to the reigning dynasty and to his Holiness the Pope, taking care, however, to put off the trial until after the 20th of September, when a general amnesty for political and press offences is always granted. This year no exception was made to the ordinary rule: the incriminated articles in the *Lega* were included in the amnesty, but the editor, anxious only for the propaganda of his doctrines, republished them all immediately, and the paper was sequestrated afresh; hence the present trial.

The first lawyers in Italy proffered their services as counsel, among them two ex-ministers; and day before yesterday the Court of Assizes was crowded to overflowing, numbers of ladies filling the small gallery. Possibly of the audience present not a hundred had read the articles originally in the *Lega*, it being, as we have said, the organ exclusively of a party; but now a copy of the sequestrated paper was handed to each of the thirteen jurymen, while the Chancellor, in a sing-song voice, resembling that of the Livornese boatmen, read out to the attentive public the six incriminated articles, "The Silken Ladder," "His Majesty," "Letter to Cavalotti," "Behind the Scenes," "Fanfulla," "The Queen and Prince," and, finally, the famous speech made at the meeting of the Politeama against the law on papal guarantees and against "Mr. Pecci."

As was intended, these articles showed up the defects of existing institutions, and some of the sentences literally convulsed the audience and the jurymen with laughter, the President himself being scarcely able to keep his countenance. The royal procurator, beside himself with annoyance, made a really ferocious requisition, accusing the author of the articles with attempting to upset the altar and the state; brought in the "box of dynamite," which increased the hilarity of the public at his expense; became quite pathetic in speaking of the Pope, and called upon the jury to save their country from such disturbers of the public peace.

The college of the defence, as it is here called, was composed of Bovio, Palomba, and several other members of Parliament; a famous counsel in several *causes célèbres* in Florence; Ceneri, the noted professor and jurisconsult of Bologna; Massa, Zuccari, Coboevich, also noted advocates, and Maiorana, ex-minister, now Senator of the realm. Bovio occupied the whole of the first day with his speech, starting from a scientific point of view, and arguing that no one of the incriminated articles violated any of the provisions of the existing press laws, seeing that with regard to the King, the Queen, and the Prince, the writer merely demonstrated that from an economical and social point of view monarchical institutions were not adapted to Italy; that Italy had proclaimed thought and speech free, and that Mario had only exercised his liberty. How much of this harangue was understood by the jurymen it is difficult to say; by his colleagues it was judged one of the most brilliant successes of this brilliant southern orator, who as a professor is the idol of the students of the University of Naples and the horror of their mammas, who accuse him of filling the boys' heads with politics, stuff, and irreligion instead of making them stick to their books and obey their superiors.

On the second day advocate Palomba analyzed the various articles incriminated, suggested that the expression, "the return of the Right to power would equal the placing of a box of dynamite under the steps of the throne," might be taken as a friendly warning to monarchy not to commit suicide by calling to its councils the men who had brought the country to the verge of ruin by exorbitant and uncontrolled expenditure, by the forced loan, by the *macinato* tax, etc. Again, why should Mario not be free to criticise the effect on Italy of the Tunis expedition, and to observe that had the people been masters of their own destinies they would have taken more care of national honor and national interests? Other people might think differently, but in what then consisted the so much vaunted free speech guaranteed by the statute, if those who held different opinions from the men in power were to be persecuted, gagged, and imprisoned? He dwelt at length on the absurdity of including in the indictment the *gerente*, who could have no possible influence on what the editor chose to write in his own paper. Maiorana Calatabiano, ex-Minister and Senator, then rose to affirm that, having read all the articles attentively, he could not find a single syllable which would justify the jury in finding either the editor or the *gerente* guilty. Mario, as a free-thinker and a republican, could not be expected to hymn the praises of either the monarchy or the papacy. All the jury had to ascertain was whether he had or had not violated any existing laws. He defied them to find proof of violation in any of the articles, and expressed his full belief in a final acquittal.

The honors of the day were, perhaps, due to Professor Ceneri, who in face and form resembles Shelley, as the portraits have handed him down to us: his eyes magnetize, his voice enchains his audience, and it was visible that he was the only orator who made any real impression upon the jury. When he sat down the president asked Signor Mario whether

he had anything to add in his own defence. He made answer that, though a republican, he respected popular sovereignty too thoroughly to dispute the legitimate authority of the king chosen by the *plebiscito*, but that his was the only legal authority in the realm, as the Constitution ought to have been voted by a constituent assembly; that all other so-called constituted authorities were illegal, including the royal procurator (a laugh raised at whose expense caused the president to threaten to expel the public). Mario concluded by saying that the law of papal guarantees was a categoric negation of the national will. The debates ended at five, and at seven the jury returned with a verdict finding editor and *gerente* both "guilty," on which the Court condemned Giuseppe Capricciosi to three months' imprisonment and a fine of 1,000 francs, and Alberto Mario to a fine of 500 francs and two months' imprisonment.

The editor and *gerente* will now appeal to the Court of Cassation, and, ten to one, the sentence will be cancelled, as there seem to have been some grave irregularities committed. But supposing the Court confirms the sentence, what great hardship is there for the prisoners? The interiors of Italian prisons became familiar to the editor in times when imprisonment meant a quite other thing than to-day. He will continue to write his articles daily, and probably with greater ease, being freed from the inevitable distractions of the editor's office, will receive his friends daily, be fed from his own table, sleep in his own bed, and tub in his own bath. The *gerente*, who is a working-man, will enjoy the same privileges: the paper will be brought to him daily to sign, and, as per contract, the proprietors of the paper will maintain him during his imprisonment. The chance of having to go to prison is the *raison d'être* of a *gerente;* the actual writers or editors of the paper never need sign their articles, the *gerente* being responsible for the whole of them. All things considered, one can hardly regard these zealous champions of the Church and of the state as wise in their generation. Naturally, these trials with Zanardelli Minister of Grace and Justice, Mancini Minister of Foreign Affairs, Bacelli Minister of Public Education, all zealous free-thinkers, and all but one republicans of ancient date, are nuts for the Conservatives, who ask: What is the difference between Liberalism and Conservatism?

The latest grievance of the Vatican is the suggestion or intimation of the Government that the canonization of the saints which is to take place on the 8th of December should be performed in the inner hall of the Vatican, and not in St. Peter's; but on the whole Leo XIII. seems well satisfied with their royal Majesties and present Ministers, and by no means despairs of himself or his successors meeting a goodly number of them at Canossa. Rome is now full of bishops, archbishops, monsignori, priests, and pilgrims assembling for the canonization, and the Government will have a weary time of it in preventing the Roman *gamins* from playing off pranks on their reverences.

RENAN'S MARCUS AURELIUS.—II.

PARIS, December 10, 1881.

MARCUS AURELIUS was brought face to face with the Christians during his campaign against the Quadi. The Roman army found itself at one time deprived of water, when a sudden storm broke out and rain fell in torrents. The "Antonine Column" was built in order to commemorate this event, which was considered miraculous. The legion which received this mark of favor from Jupiter Pluvius was named for a time the Thundering. There were some Christians with Marcus Aurelius who pretended that the miracle was the work of their God, not of Jupiter. There was much talk on the subject in all the Christian churches. The conduct of Marcus Aurelius toward them was not modified; the number of the martyrs did not decrease, and, under the mildest of rulers, persecution became as terrible as it had ever been. Renan excuses the Emperor on the plea that he could not alter the law and interfere with the judges. Everywhere it seemed to the conservative Romans that the new Church threatened not only the old religion, but all the foundations of social order. The proconsuls were like the prefects of our day—they merely made themselves the instruments of the law. The bishops tried to move the heart of the Emperor; they sent to him all sorts of *apologiæ*. He read them, or was supposed to read them. These *apologiæ* prepared the reconciliation of the Empire and of Christianity. The bishops did not now speak like enemies; they tried to prove that the good Emperors had favored Christianity, and that the wicked had persecuted it—a theory quite contrary to history, but convenient, and likely to pave the way to reconciliation. Tertullian will still doubt whether the same man can be Cæsar and Christian, but a century after him such a doubt will seem absurd. Marcus Aurelius, it must be confessed, despised the new religion, viewing the Christians and the Jews with the same pity. In Palestine he once said: "O Marcomanni! O Quadi! O Sarmatæ! I have found here a people more stupid than yourselves." He was a Roman, and as a philosopher he looked upon all religious fanaticism with impatience.

The last three years of the reign of Marcus Aurelius were saddened by spectacles "unworthy of such a perfect sovereign." Public opinion had become very much excited against the Church of Lyons in France. Every year deputies of all Gaul used to go to Lyons to the "Concilium Galliarum." The Christians, who did not take part in those festivities, were looked upon as infidels, atheists, accused of every crime. In 177 the Christians were persecuted, tortured, and martyrized. To every question the deacon Sanctus, of Vienna, merely answered: "Christianus sum." The old Bishop Pothinus was among the victims. The imperial Legate gave great exhibitions to the people; all those who persevered in the Christian confession were killed, beheaded, or abandoned to the fury of wild beasts. Blandine, a young Christian virgin, was exhibited the last day in the circus, and killed before a horrible populace by a wild bull. Forty-eight Christians in all were martyrized on this occasion. But the blood of martyrs is never shed in vain, and Irenæus soon took the place of Pothinus. How absurd are those who think that ideas can be conquered by laws, and religious enthusiasm by death. The attacks of Celsus against Christianity were as futile as the persecutions: in vain did Celsus prove that the greatness of the Roman Empire had been concomitant with the old religion; in vain did he show the divisions of the new churches; in vain did he point to the bloody, hard, egotistical character of Jewish history, to the extraordinary theories of the Apocalypses. In the midst of the extravagance of the Montanists and the Gnostics; of the Sibylline impostures; of the ignorance and the social misery of the new sects, there was something which Celsus did not understand. The spirit of Christianity, the tender sympathy for the poor, the illiterate, the weak, the slaves, the women, were foreign to a thoroughly Roman character. In one sense, Lucian, the sceptic, was not so far from Christianity as his contemporary Celsus. Celsus admits all religions, and makes them subordinate to the state; Lucian denies all religions—he is an enemy of paganism, he asks not for persecutions.

"In Lucian," says Renan, "first appeared that form of the human genius of which Voltaire was the complete incarnation [Renan seems to forget Erasmus]. Man being incapable of solving seriously any of the metaphysical problems which he imprudently raises, what should the wise man do in the midst of the war of religions and systems? Abstain, laugh; preach tolerance, humanity, unpretending charity, gayety. The real evil is hypocrisy, fanaticism, superstition. To substitute one superstition for another is to render a very poor service to humanity. The radical remedy is the remedy of Epicurus, who suppresses at one blow religion, and its object, and the evils which it brings with it. Lucian appears thus like a wise man in a world of fools."

It is evident that such passages as this have been written under the preoccupations of modern events. They produce, in my opinion, what the musicians call a dissonance in a concert; they are not quite in harmony with the tone of a historical work. But if "aliquando dormitat Homerus," the historian also sometimes becomes modern. We shall say nothing of the various *apologiæ* of Athenagoras; of Theophilus, of Antioch; of Minucius Felix. Their pleadings had no power to stay the persecution. Christianity, meanwhile, was organizing itself more and more; the Church of Rome became more and more preëminent. The history of this organization may be divided into five periods: first is the primitive *ecclesia*, where all the members are equally inspired; then the ancients, or *presbyteri*, assume a certain authority; then the president of the ancients, the *episcopus*, becomes preëminent; the various *episcopi* compound with each other, and form finally the Catholic Church. At the end of the second century the principle of the episcopate was already ripe, and papacy was virtually contained in this principle. There were no General Councils yet, but everywhere there were provincial synods. The Church was becoming gradually a state within the state.

Meanwhile Marcus Aurelius was slowly dying. An immense revolution was taking place in his empire, and he did not understand it; he only saw in it a result of the fickleness and inconstancy of mankind. He looked around with resignation. He had almost given up speaking; he went through his daily duties like a victim; he took all his pleasure in praying. His 'Thoughts' have the form of those ejaculations which became a part of the Christian monastic life. Renan compares him to the descendants of the nobility of Versailles, who make themselves in our times Trappists or Friars. "Woe," says he, "to the old aristocracies who, after the excesses of a mad youth, suddenly become virtuous, human, quiet! It is a sign that they are going to die." Marcus Aurelius was not happy. He had, in a moment of weakness, accepted as his associate in the empire Lucius Verus, a frivolous and foolish man. His wife Faustina was not worthy of him; she became tired of his austerity, of his simplicity, of his melancholy; she was young and handsome; she lived apart, with her lovers. The Emperor always shut his eyes on her conduct; she was ever his "good and faithful wife." But the heaviest blow which fell on him came from his son. The Darwinian theory would find it impossible to link together the profound, noble, and thoughtful nature of Marcus Aurelius and the nature of Commodus—a stupid, athletic, ferocious young man, born to be a butcher's valet. He lived with the lowest companions; he was so stupid that he could bear no other company. Marcus Aurelius would have done well to adopt another heir, as the law of the empire allowed him to do; but, on principle, he defended the hereditary principle, and he hoped against hope; he believed that Com-

modus would throw off his vulgar vices with his youth. Morally, he may have been right; in fact, he gave to the empire a ruler who led the most disgusting life with the valets of the circus and of the amphitheatre. The people would not believe that Commodus was the son of Marcus, and whispered that he was the son of a gladiator. The medals, however, and the monuments show much physical resemblance between Marcus and Commodus.

For years Marcus led the most melancholy life. All his early friends, formed under the rule of Antoninus, were gone. He remained alone in his generation, with the horrible thought that his son would become a Caligula or a Domitian. He had but one thought: he wished to glide out of life noiselessly, as a well-bred man leaves a drawing-room. "He had attained," says Renan, "the Buddhist *nirvana*, the peace of Christ. Like Jesus, Sakyamuni, Socrates, Francis of Assisi, he had completely conquered death." He left Rome on the 5th of August, 178, for the Danube; on the 10th of March, 180, he fell ill, and at once sent for Commodus and bade him continue the campaign. The army was inconsolable. The Emperor had still strength enough to present his son to the legions. After the seventh day he felt the end coming; he sent his son away, either because he dreaded the contagion for him, or because he preferred to die alone. He covered his head with his toga, and remained thus for a whole day; the night afterward he expired. His death is justly considered by Renan as the death of a whole world, of a whole civilization. All was now in ruins:

"In the domain of philosophy, the great Emperor had placed the ideal of virtue so high that nobody could well attain it. In politics, as he had not separated profoundly enough the duties of the father and the duties of Cæsar, he unwittingly opened the era of tyranny and of anarchy. In religion, through too great attachment to a state religion, though he saw its weaknesses, he prepared the violent triumph of the non-official religion, and exposed his memory to reproaches which ought not to lie against so pure a life. . . . After the greatest effort of governmental rationalism, after eighty years of a good régime, after Nerva, Trajan, Hadrian, Antoninus, Marcus Aurelius, the reign of evil recommences worse than ever. Adieu, virtue! Adieu, reason! Since Marcus Aurelius could not save the world, who will save it?"

It is a melancholy thought that the infamous Commodus was at first more lenient to Christianity than his father. He liked the Egyptian gods; he was not a thorough Roman; one of his mistresses was almost a Christian. We will end here our analysis of Renan's last volume; we will only add that it is as interesting as any of the preceding volumes, that its style preserves the same incomparable qualities, and that it ends with the 'Beginnings of Christianity.'

Correspondence.

EARLY HISTORICAL COLLECTIONS.

To the Editor of The Nation:

Sir: In your "Notes" of this week, alluding to Pertz's 'Monumenta Germaniæ Historiæ' and its predecessors, you do scant justice to the earlier scholars whose zeal and earnestness in editing the contemporary chronicles of their respective nationalities have in great measure preserved for us the materials of European history. Leibnitz was only one, and by no means the most deserving, of a numerous band who had been laboring in the field for a century and a half; and Duchesne's 'Historiæ Francorum Scriptores' was by no means the most conspicuous of the models which Leibnitz had before him. In fact, Duchesne's earlier collection—the 'Historiæ Normanorum Scriptores,' published in 1619, thirty years before the other, is by far the more valuable of the two. I fail to see what connection the Magdeburg Centuriators and Baronius have with these, as the latter were compilers and historians—not editors of collections presenting the original sources of history. This editing and collecting, to which we owe so much, began at a much earlier period than your remarks would seem to infer; and as you have called attention to the matter, perhaps you may be willing to find space for a brief list of some of the first contributions to a literature which has since grown to dimensions quite appalling.

In Germany I may mention:

Simon Schard.—Germanicarum Rerum quatuor Chronographi. 1566.

J. Pistorius.—Rerum Germanicarum Scriptores. 3 tom., 1583–1607.

Just. Reuber.—Veterum Scriptorum qui Cæsarum et Imperatorum Germanicorum res literis mandarunt. 1584.

Ch. Urstisius.—Germaniæ Historicorum illustrium Tomi II. 1585.

Marq. Freher.—Rerum Germanicarum Scriptores. 3 tom., 1600–1611.

—— Rerum Bohemicarum Scriptores. 1612.

M. Goldast.—Rerum Suevicarum Scriptores. 1605.

—— Rerum Alamannicarum Scriptores. 1606.

Erp. Lindenbrog.—Scriptores Rerum Germanicarum Septentrionalium. 1609.

The earliest French collections are:

Pierre Pithou.—Annalium et Historiæ Francorum Scriptores coætanei XII. 1588.

—— Historiæ Francorum Scriptores Veteres XI. 1596.

In English history we have:

Rerum Britannicarum Scriptores vetustiores. Heidelberg, 1587.

H. Savile.—Rerum Anglicarum Scriptores post Bedam præcipui. 1596.

An Englishman was the earliest editor of Spanish history:

R. Bell.—Rerum Hispanicarum Scriptores aliquot. 1579. Followed by

Sandoval.—Historias de Idacio, Isidore, etc. 1615.

Italy, likewise, was not conspicuous for early zeal in this direction, but we have:

O. Fazelli.—Rerum Siculorum Scriptores. 1579.

Andr. Schott.—Rerum Italicarum Scriptores. 1600.

Vulcanius.—Gothicarum et Longobardicarum rerum Scriptores. 1597.

Bongars, in 1600, brought out his 'Rerum Hungaricarum Scriptores varii,' and he followed this in 1611 by his 'Gesta Dei per Francos'—a collection of the chronicles of the Crusades, not strictly national in its character, perhaps, but yet an effort in the same direction.

More germane to the subject than Mabillon's 'Acta Sanctorum O. S. Benedicti,' to which you allude, are the great collections of the Councils and Fathers. Of these, the comparatively humble beginnings are to be found—of the former, in Fr. Laurentius Surius's 'Conciliorum Tomi IV.,' published in 1567, the four volumes of which have expanded to the twenty-nine which compose the collection of Labbe and Mansi. Even this latter is very imperfect, and it is to be regretted that the late Abbé Migne was unable to add an enlarged edition of this to his very useful, though imperfectly edited, series. As regards the patristic collections, due honor should be paid to Margarin de la Bigne, who issued (1576–9) his 'Bibliotheca veterum Patrum,' in nine folios, which expanded finally into the 'Bibliotheca Maxima veterum Patrum,' which, with its appendices, amounts to thirty folios; to say nothing of Migne's 'Patrologiæ Cursus Completus,' the extent of which, if ever finished, it would be rash to estimate.

Most of the above details will be found in Potthast's "Wegweiser durch die Geschichtswerke des Europäischen Mittenalters"—an invaluable work for the student of mediæval history. L.

Philadelphia, Dec. 23, 1881.

Notes.

All persons having letters from the late Bayard Taylor which might be of service to his literary executors in the preparation of his life, are requested to lend them to Mrs. Taylor, who may be addressed at No. 142 East Eighteenth Street, New York, or at Kennett Square, Penn. They will be copied and returned.——The new *Atlantic* portrait of Emerson, life-size, improves on acquaintance, and appears to us not inferior, to say the least, to its predecessors in the same series. It represents the poet in his prime.——The Dante Society of Cambridge, Mass., has had the ground cut from under its preparations to publish Benvenuto da Imola's Comment on the 'Divine Comedy,' by information that the present Lord Vernon has begun to carry out his father's design to do the same thing, using his copy of the Laurentian manuscript of the 'Comedy.'——The Maine Historical Society has undertaken to obtain for its library, as far as practicable, a copy or set of all printed productions of Maine citizens, of both sexes, including non-resident natives.——A monument to Sir Francis Drake is contemplated at Plymouth, England, on the eminence known as Plymouth Hoe, and the New World is not inappropriately asked to share in the tribute to the great navigator's memory. Subscriptions may be sent to Mr. Alderman Derry, Municipal Buildings, or to the Mayor of Plymouth, Mr. Charles F. Burnand.——Mr. Dorman B. Eaton's 'Civil Service in Great Britain,' with an introduction by Mr. George Wm. Curtis, has been added to the Harper's Franklin Square Library. The placing of this important work at a merely nominal price renders the cause of civil-service reform substantial assistance. To the same series will shortly be added 'The Dickens Reader,' illustrated, the selections having been made by Nathan Sheppard. We cannot say that we regard this as a move in the right direction for the elevation of the standard of reading in schools.——Apropos of Dickens, J. R. Osgood & Co. have brought out in a pretty pocket volume Mr. J. R. G. Hassard's letters to the *Tribune* two years ago, now entitled 'A Pickwickian Pilgrimage,' a methodical description of the scenes of the 'Pickwick Papers.' Those who are not satisfied with this pious if restricted labor, nor yet with recent illustrated papers of a broader scope in *Scribner's Magazine*, may order of Chapman & Hall, London, the shilling pamphlet, 'Charles Dickens at Rochester,' which contains a number of nice woodcuts.——Houghton, Mifflin & Co. will soon publish 'Noah Webster,' in the "American Men of Letters" series; and a 'Life of Copley,' the painter, by Mrs. Charles Amory, containing an engraving of his likeness by himself.——In continuance of their tasteful uniform series of Dr. Holland's works, Charles Scribner's Sons have issued 'The Jones Family,' 'The Mistress of the Manse,' and 'The Puritan's Guest, and Other Poems.'——The second volume of Irving's 'Washington' in their "Geoffrey Crayon" edition has been issued by G. P. Putnam's Sons.——J. R. Osgood & Co. have issued a second edition of Mr. J. Pickering Putnam's useful treatise, theoretic and with a great abundance of beautiful examples, on 'The Open Fireplace in All Ages.' An appendix of tables facilitates the comprehension and use of the metric dimensions employed

in the plates and text. The same publishers have taken special pains with an edition of the 'Imitation of Christ,' abounding in ornamental initial letters and head and tail-pieces, apparently of foreign derivation.——An 'Address Commemorative of Elihu Root, Professor of Mathematics and Natural Philosophy in Amherst College,' by his colleague, Professor H. Humphrey Neill, is just issued in a neat little brochure from the press of James H. Earle, Boston. Professor Root died at Amherst very suddenly a little more than a year ago. A mere country lad, coming to college from a neighboring town, he rapidly attained a high standard of scholarship, which he maintained to the end. A tutor in the college, a student of theology, and later passing the turning-point of his life under Lotze, of Göttingen, he became a pupil of Helmholtz, who set a high estimate on his genius for physical research. Professor Neill's memorial is the feeling tribute of a loving and devoted friend, without attempting a strict estimate of the value of his original scientific work.——An English child has just died of fright caused by her belief in Mother Shipton's prophecies of the approaching end of the world. An English journal, instead of blaming the want of popular education which makes such belief possible, has fallen foul of the booksellers who deal in the trash. Certainly it is easier to prevent the publication or sale of doggerel prophecies than it is to enlighten a whole layer of society. But fancy a New England girl frightened to death by Mother Shipton's rhymes. The *Bookseller*, by the way, proposes a remedy that might be worthy of adoption in places where public libraries furnish too large a supply of sensational fiction. "The parents deserve to be flogged for allowing her to read it."

—The January *Harper's* opens with a paper, by Mr. G. F. Muller, on "King Coal's Highway," almost to be called poetically graphic in its management of statistics, as well as in its description of coal transportation from Pittsburgh to New Orleans. In our reading it is absolutely fresh, and its account of the nature and conduct of "tows" and of the perils of river navigation must, we think, be new and interesting to a very large majority of the patrons of the magazine. Whoever passes from this to a subsequent paper, by Mr. W. H. Bishop, "With the Van-Guard in Mexico," makes an at least logical transition. Here what is remarkable is the plain exposition of the unwholesomeness of the site of the city of Mexico, and the nature of the drainage problem caused by the higher levels of the adjacent lakes. A fourth paper completes Mr. Joseph Hatton's series on "Journalistic London" (which we learn through the *Athenæum* will eventually make a book), by relating the history of *Lloyd's Newspaper* in particular, with some account of the *Guardian*, *Post*, and *Athenæum*, and of the *Illustrated London News* and *Graphic*. Mr. Lloyd, in this respect surpassing even the *Times*, makes his own paper, in his own mill, from esparto grown on his own farm in Algeria. Such enterprise contrasts curiously with the disposition in this country to invest surplus newspaper profits in Central African and Polar exploration. Among the portraits which accompany Mr. Hatton's readable gossip, those of Blanchard Jerrold and Sir C. W. Dilke will chiefly attract American eyes. Portraits in great number adorn also Mr. George R. Crooks's article on "Young Men's Christian Associations." We may mention, besides the foregoing, Mr. James Jackson Jarves's "Ancient and Modern Venetian Glass of Murano," of which the illustrations represent portions of his own collection given to the Metropolitan Museum; Mr. Robert P. Keep's "The Boundary of Greece," with a chart showing the various lines compromised on the one now established; and Mr. William T. Davis's "Who Were the Pilgrims?"—before they came over, namely.

—"Who were the Chartists?" is the question asked and satisfactorily answered by Mr. W. J. Linton in the January *Century*. He gives a number of biographical sketches of the leaders with whom he was more or less intimately acquainted, and vindicates their amiable and philanthropic character. He does not make it clear, however, for American readers, why the Chartism of such men was "a word of fear in England, from 1837, for ten to fifteen years onward," though this might have been done in a few broad strokes without entering upon a history of Chartism, which the writer expressly disclaims doing here. To the dead and the not few living of his old associates, Mr. Linton pays an added tribute in the shape of portraits of Lovett, Hetherington, Watson, Moore, Frost, and Cooper, engraved by his own hands—some of these, if not all, being unique. He has, perhaps, overlooked, as he does not refer to it, an admirable likeness of Henry Vincent that appeared in *Harper's Monthly* for July, 1880. Mr. Bishop's "With the Van-Guard in Mexico," in the current issue of the latter magazine, is paralleled in the *Century* by Mrs. Mary Hallock Foote's pleasant paper on "A Provincial Capital of Mexico." Mrs. Foote herself encounters the "van-guard"—"a barefooted Indian lad carrying the red signal-flag of the railroad engineers, and . . . a little troop of horsemen riding in—a detachment of the advance of the nineteenth century." In like manner Senator Edmunds's "Political Aspects of Mormonism" (*Harper's*) is matched or supplemented by Mr. A. G. Sedgwick's "Legal Aspects of the Mormon Problem," while what in Salt Lake City will probably be thought a kindred topic, "The Increase of Divorce" (among the Gentiles), is discussed by the Rev. W. Gladden. In fact, the writer expressly says that "the looseness and confusion of State legislation on this subject renders it difficult for the general Government to deal with the Mormon problem. . . . The Mormons might easily point out that polygamous relations are maintained under State laws." One more coincidence in the two illustrated magazines is to be found in Mr. Jarves's story of the revival of Venetian glass and Catherine Cornaro's "Revival of Burano Lace" (the *Century*), another Venetian industry. Mr. John Burroughs defends our American songsters against the Duke of Argyll's too hasty conclusion that they are inferior to the British; Mr. Ernest Ingersoll gives a sober account of the really remarkable Caverns of Luray in the Shenandoah Valley; and Mr. Elihu B. Washburne contributes some disordered and not very valuable "Reminiscences of Thiers," with such idiomatic translations as the following:

"M. le Marquis de Piré: You are the trumpet anti-patriotic of disaster. . . ."

"M. Thiers: . . . I am ready to submit to all to avert the shedding of blood. . . ."

"M. Jerome David: Guard your lessons—we reject them."

However, we get a solid piece of engraving in Cole's portrait of Thiers, after the impressive painting by Bonnat.

—In pointing out the objectionable character of the fiction in the Boston Public Library, Mr. James M. Hubbard appears to have stirred up a hornet's nest. The Boston *Globe* has called him a "crank." The Boston *Herald* declares that he has a bee in his bonnet, and that his extracts are garbled and misrepresent the real character of some of the books noticed; and the writer truly remarks that before attacking a public institution it is well to be sure of one's facts. The facts in the present case are the evil characters of the hundred novels. It seems to an outsider as if Mr. Hubbard must have been tolerably correct in his facts, since in the same week in which the too-zealous defenders of the Public Library are taking this course, the Public Library itself has withdrawn from circulation all, or nearly all, of the books mentioned in Mr. Hubbard's list. At least, this assertion is made by the *Congregationalist*, in an editorial that appears to be founded on a *communiqué* from the Library. It is, however, only fair to state that the Trustees have made no public declaration to this effect, and that, so far as can be officially known, they still adhere to the declaration in the last annual report, that "it is obviously impossible, as it would be highly improper, for the Trustees to exclude such authors as these."

—The principal enterprise in American bookmaking in 1882 will consist, we are told, in publishing the third edition of Appletons' Cyclopædia. Is it too much to hope that the revisers will insert a few of the ordinary devices to facilitate the work of searchers? We do not recollect any book which is so good an example of what an encyclopædia should not be in this particular. Look, for instance, under the article "England." It has twenty-nine pages, or fifty-eight columns, of not too large type, treating of the physical geography, the geology, the climate, soil, agriculture, manufactures, education, revenue, navy and army, judicial system, and history, and very likely of more subjects which we have overlooked. Now, in all these fifty-eight columns there is not a pretence of a guide to the subject treated of. If you wish to find out about education, you dip in somewhere and read enough to find out that you are not in the section on education; then you dip in somewhere else, with a like result; then perhaps you begin at the beginning and look through the article till you come to the part wished for. Every country is treated in this unworkmanlike way. It would not have taken one line more of space to note the subdivision at the top of the page—to have the running title not "England," but "England (Geology)," "England (Education)," "England (History)"; nor would it have been a very severe tax on the editor's powers. To provide such an unhandy tool falsifies the title of the encyclopædia, for it is thoroughly *un*-American.

—The seventh volume of the reports upon the United States Geographical Surveys west of the one hundredth meridian is prepared by Prof. F. W. Putnam, assisted by Drs. C. C. Abbott, Haldman, Yarrow, and Messrs. Henshaw, Carr, and Gatschet—the last-named furnishing a classification into seven linguistic stocks of Western Indian dialects contained in forty vocabularies. The body of the volume, however, is devoted to the archæology of southern California. Some special interest pertains to archæological investigations upon the Pacific Coast, arising from the great antiquity assigned by Prof. Whitney to the date of man's advent there. Prof. Putnam accepts his decision upon the question, and derives some assistance from it in solving the complicated ethnological problems of that region; and in turn comes to Prof. Whitney's assistance with a subsidiary hypothesis to relieve him from the objections urged by both archæologists and evolutionists against the reality of his discoveries. Archæologists object to Whitney's conclusions because the stone implements he purports to produce from the pliocene deposits are all of a neolithic type, whereas, according to experience in every other part of the world, they should at that early stage of human development have been palæolithic. Upon similar grounds, evolutionists doubt the genuineness of the Calaveras skull because of its similarity to modern skulls. Prof. Putnam sees no reason why the

earliest home of man, like that of the horse, may not have been in America, and that having reached the lower status of barbarism in which his physical wants were supplied, the very luxuriance of the conditions of life in southern California removed inducements to the higher exertions which alone are productive of civilization. It is unfortunate respecting Prof. Whitney's evidence that further discoveries cannot be expected, owing to the changed modes of mining now in use; but it is evidence notwithstanding, and of a circumstantial and definite kind, and, as Prof. Putnam insists, should be weighed on its intrinsic merits, however much opposed to the prepossessions of archæologists. Prof. Putnam looks upon the Eskimo and the Innuit as the purest continuation of the primitive American stock, whose inferior development is to be accounted for on the supposition that they became separated before the highest degree of development had been reached in California. The Eskimo element is, however, still pronounced both in the physical characters and in the arts of the Californians.

—There has been no time in the past fifty years when the name of Leonard Bacon, whose death occurred suddenly on Saturday, at New Haven, has not been familiar to his countrymen and prominent in the denomination to which he belonged. It was only by accident that he was born in Michigan, for he was the incarnation of New England Puritanism, which he illustrated in his two-fold concern for orthodoxy and for public education. His intense clericalism made him, after Dr. Beecher's removal to Boston and the West, the primate of Congregational Connecticut, and led him while still a young man into the misdirected championship of the Colonization Society against the intuitive and overwhelming attacks of the Immediate Emancipationists. With the latter he never became reconciled, discovering a new ground for his opposition when they incurred the reproach of "infidelity." According to his intellectual powers and his influence on the churches, he undoubtedly retarded the growth of the anti-slavery sentiment in New England and in the country at large; but in time he allied himself with the political movement against the extension of slavery, and took a leading part in the clerical protest against the Kansas-Nebraska infamy. With Drs. Storrs and Thompson he founded the *Independent*, partly in the interest of anti-slavery ideas, which were generally excluded from the orthodox press, and he remained a frequent contributor to that paper down to the day of his death. Dr. Bacon had no great reputation as a sermonizer, but he was a very positive and forcible writer, and was never more in his element than as a controversialist. He had a weak side for Dr. Bushnell, in the days of the latter's persecution for heresy, but he did not share his views. His conservative temper was averse to all innovation in matters theological, among which he reckoned the higher education of young men. His professorial and gubernatorial connection with Yale College was marked by resistance to tendencies which will probably prove as irresistible as those which the Abolitionists represented. In his previous pastoral career he made himself respected and beloved, and as a public character he always showed the courage of his convictions, though these seldom brought him into unpopular attitudes. In strength of body and mind, and in the conscientious and inflexible pursuit of duty, he did honor to the land in which he was educated and achieved distinction.

—Oliver Ditson & Co. have added to their numerous useful collections of vocal and instrumental music a 'Norway Music Album,' edited by Auber Forrestier and B. B. Anderson, which deserves a large sale. American civilization, according to the preface, is of too recent a growth to have the glowing background of mythology, popular epics, and folklore requisite for the production of a rich crop of popular music. But we are very quick at assimilating the treasure-stores of other nations, and among these the Norwegian folk-songs and dance pieces are not the least attractive. These "weird tunes, improvisations in their original form, inspired by the spirit-voices of the fjords, the mountains, the waterfalls, the forests, and by the orchestral strains which are actually heard among the mountain regions," are aptly described by the words weirdly romantic, grotesquely solemn, and profoundly melancholy, with an occasional touch of quaint humor. Svendsen, Grieg, and other northern composers, have made frequent use of these popular melodies to give a national flavor to compositions otherwise formed according to German models. The use of such bits of local color for the purpose of stimulating the jaded palates of an audience listening to an otherwise insipid opera, has justly evoked the scathing satire of R. Wagner; but when they are utilized by such masters as Rubinstein, Verdi ("Aïda"), and the Norwegian composers just mentioned, the result is as artistic and legitimate as in case of the modern poems based on ancient legends. Still, the masses are apt to prefer the folk-songs in the more primitive form in which they are presented in the 'Norway Album.' The first part of this collection, which is based on earlier collections by Lindemann, Kjerulf, Grieg, Svendsen, and others, contains songs and dances arranged for the piano—the former with the words added, so that they can be sung as solos, or in some cases as quartets. Part second contains selections from the original works of the modern Norse composers, both vocal and instrumental, all of moderate difficulty. The introduction offers some general remarks on the nature of folk-songs and brief biographical sketches of leading Scandinavian musicians, including Ole Bull, to whose memory the volume is dedicated.

—Meyerbeer's "Les Huguenots," which, in spite of Schumann's famous anathema, is now generally regarded as his masterwork, was put on the boards at the Academy of Music last week in a very creditable manner. In a game of cards it is customary to retain the best trumps till the end, but in Italian opera it should be otherwise. If Mr. Mapleson had engaged Mlle. Rossini a few weeks earlier, and produced "Aïda," "Les Huguenots," and "Mefistofele" sooner, the latter with a somewhat altered cast, the season would have been more satisfactory from an artistic point of view. Excepting the chorus, which was lacking in firmness and shading, and the scenery, which, as usual, was somewhat primitive, last Wednesday's performance may be called a success. The orchestra, not having the dreary functions of a mere guitar, was more animated and wide-awake than usual. Meyerbeer knew how to put the musicians in good humor by giving them an occasional solo all round—a proceeding which would be reprehensible in a true music-drama, but in an opera helps to amuse the public. The principals included almost all the good material Mr. Mapleson had on hand. There were Signori Galassi, Del Puente, and Novara, who did ample justice to the rôles of *Saint Bris*, *Nevers*, and *Marcel*. Then there was Mlle. Lauri, who made a tolerably good *Urban*, but no more than that. Mlle. Juch's *Marguerite* surpassed all her previous efforts, and although in her play she still showed a want of routine, her voice gave pleasure by its purity of intonation, smoothness, and agreeable *timbre*. She only needs more power in order to become a very useful opera singer. Signor Campanini's impersonation of *Raoul* deserves very much praise, but by no means unqualified praise. A slight fog hovered over many of his tones and made them wanting in clearness. Some of the most difficult passages were made easy by the adroit substitution of the falsetto for the natural voice. Like many Italians, Campanini mistakes loudness and intensity for real dramatic passion, and his expression lacks variety and appropriateness—that is to say, he is not a dramatic tenor. His play, his gestures, and attempts at facial expression are often such as to provoke laughter at the wrong moment. For instance, the exaggerated writhing and wriggling of his body at the window after the shot, induced a lady near us to exclaim, "Was he shot?" Better proof of the correctness of our criticism could not be found. Mlle. Rossini, on the contrary (*Valentine*), is a genuine dramatic vocalist. Her play was not free from occasional exaggeration—thanks, perhaps, to the example of *Raoul;* but in general it was natural and appropriate. Her voice was almost entirely free from the defects noticed heretofore—an occasional deviation from the pitch and a slight tremolo. It was fresh, clear, strong, smooth, well sustained, and wonderfully impassioned in the agitated scenes. If Mlle. Rossini continues in her present course and finds opportunity to develop her uncommon talent by appearing in first-class operas having a dramatic background, she may in a short time claim a place among the leading *prime donne* of the age. A year's study under the supervision of R. Wagner, or his pupil Materna, would enable her to reach that goal sooner than any other method.

—'Speculum regale, ein altnorwegischer Dialog,' edited by Dr. Oscar Brenner, has been published by Christian Kaiser, in Munich. It is the third textual edition of the so-called 'Konungs Skuggsjá' (King's Mirror) of the old Norse literature, having been edited in 1768 by Halfdaer Einersen, and in 1848 by Kayser, Munch, and Unger. It was formerly ascribed to the time of King Sverre, but it is now admitted on all hands to belong to the classic time of King Hakon—about 1230-50. The author is anonymous, but he describes himself as a Norwegian, who lived in Halogaland, the northern part of Norway, the region visited by King Alfred's henchman, Othere. It is a dialogue between father and son, and is one of the most remarkable products of the scholastic school of the time. The work has attracted much attention in the literary world. Its chief value consists in its vivid description of life in the thirteenth century, and of the state of learning in those days. The author sets out to discuss the occupations, manners, and rules of life for (1) chapmen, (2) courtiers, (3) learned men, (4) common people; but only numbers 1 and 2 were ever completed. In section 2 there is a long discussion on weapons and warfare, on court manners, dress, etc., which is very interesting, but is based on foreign fashions of the time of the Plantagenets, and not, as one might suppose, on life in Norway. In chapters 8–23 there is an elaborate description of the striking natural phenomena to be found, or which were thought to exist, in Scandinavia, in Ireland, the wonderland of the Middle Ages, and in Iceland and Greenland. There are accounts of whales, seals, icebergs, northern lights, volcanoes, geysers, etc., which are especially interesting for the startling knowledge they reveal of natural history. The excellent information given concerning the Norse settlers in Greenland and their mode of living will always be of inestimable value. Einersen's edition of 1768, though very good for its time, is of course antiquated;

the Christiania edition of 1848 was published in a normalized Icelandic spelling; Brenner's edition, which is in the Norse spelling of the old vellum, printed from a photograph of the old manuscript, is therefore a timely work. The price of it is five marks.

—The blue-covered pamphlet of nineteen pages, printed at Yokohama, and entitled 'The Food of the Japanese People,' by Thos. B. Van Buren, our Consul-General in Japan, has a threefold interest, to which we shall refer in the order of chronology. In the first place, one cannot help contrasting the former life and works of the average American consul in Japan, in the first days of our intercourse with the newly-opened country, with those of the present. Drawing a veil over the disreputable past, it is gratifying to state that the consuls and their chief now annually furnish a fund of sterling information for the merchant and general reader in the United States that compares very favorably with the British Blue-book reports. In the second place, we cannot help thinking that whether General Van Buren's name was justly or unjustly associated with the "Vienna scandal" of 1873—so industriously circulated by Mr. Jay—he has done honor to his office and Government thus far in his present post. His vigorous manner of handling the "roughs" of the foreign settlement, and purging it of the worst elements from the slums of the Pacific Coast, is still gratefully remembered by Japanese and foreigners. In the third place, the pamphlet before us is but one of the many evidences of his studious ability. From it we learn that to the 36,000,000 Japanese people there are only about 1,000,000 head of cattle, or 2 head to every 100 people; while in the United States there are 73 head of cattle to every 100 people. Of 36,000 cows slaughtered last year (the emasculation of male cattle not being practised, they are not fit for food), more than one-half were consumed by foreigners on shore or ship. Few natives, except officers in the capital, sailors, and soldiers, eat beef. Mutton and pork beyond the treaty ports are hardly yet known. About 200 varieties of fish are eaten, one-half of the people eating fish every day. The food of the masses is "90 per cent. vegetable." The list of food-plants in use, not including sea-plants, was prepared for the pamphlet, with their analyses, by Prof. Edward Kinch, of the Tokio University. A large number of these substances are unknown, or at least unused, in the United States. Of rice, which occupies in its culture one-half of the cultivated land, there are 250 varieties of seed in the country. Millet is extensively used, but bread raised from a "sponge" of yeast is hardly yet known in the popular diet, the old Latin-Portuguese word *pan* being, however, in use. The soy-bean, which in chemical composition closely approaches animal fibre, is extensively cultivated. Probably no country excels Japan in the variety of leguminous plants raised for food. Of tubers and roots, the sweet potato is the most popular, though, strange to say, as much tabooed by the aristocratic classes as onions are supposed to be among us. 16,000,000 bushels of these "Satsuma potatoes" were produced last year, while the "Java" or "Dutch"—our common white potato—is left to foreigners, the native palate not liking it. Lily bulbs—sixteen varieties—serve as food, boiled and served with "drawn butter." The lotus root is eagerly eaten without oblivion of country or decay of patriotism. Poppy seeds powdered as condiment, infusions of salted cherry blossoms for drink, horse-chestnuts, and acorns are among the articles of diet. We do not agree with the author in his assertion that the Japanese "live about the average lives of the laborers of Europe and America, with a table expenditure of about one-sixth or one-seventh that required by the latter." If the General means "expenditure" of money, we agree with him; but if he means one-sixth in weight or bulk of food, or would have us believe that hour for hour in value of work the Japanese laborer is equal to the farm-hand or navvy of England or the United States, then, after long observation and some practical experience with laborers, we have only to say that we wonder at either statement.

A MODERN PUBLISHER.

James T. Fields. Biographical Notes and Personal Sketches, with Unpublished Fragments and Tributes from Men and Women of Letters. Boston: Houghton, Mifflin & Co. 1881.

MRS. FIELDS'S memoir of her husband is chiefly noticeable for its good taste. Great care has evidently been taken to omit the names of all living persons where any offence could possibly have been given; and besides this, as a biography of a husband by a wife, the general tone of the book is to an unusual degree restrained and impersonal. Mr. Fields's life was not in any way remarkable for incident, and derives its chief interest from the really extraordinary number of noted people with whom he was continually thrown in contact through his occupation as a publisher. Mrs. Fields gives numerous sketches by well-known writers of his character, all of which agree that he was a man well adapted for the business he selected, and one whose moral qualities aided him in it. Dr. Holmes is quoted as writing privately a few words about him, which sum up his intellectual and moral traits and his relation to literature very well:

"His mind was as hospitable as his roof, which has accepted famous visitors and quiet friends alike, as if it had been their own. From a very early period in my own life of authorship I have looked to Mr. Fields as one who would be sure to take an interest in whatever I wrote, to let me know all that he could learn about my writings which would please and encourage me and keep me in heart for new efforts; and what I can say for myself many and many another can say with equal truth. Very rarely, if ever, has a publisher enjoyed the confidence and friendship of so wide and various a circle of authors; and so, when he came to give the time to authorship which had always for many years been devoted to literature, he found a listening and reading public waiting for him and welcoming him."

The record of his literary life is not important. We find here and there some entertaining anecdotes derived from his career as a lecturer, or furnished by his European trips. In writing from a large city visited on one of his lecturing tours, he mentions the case of a young man who came to him for his advice, there being no ground for the visit at all except that the young man regarded him as an "educator."

"He said he belonged to one of the oldest families, and wanted my advice as to his education. He wanted to attach himself to me, he said, and be with me constantly. He wished to be carried up as high as the mind of man could go, to the extent of human knowledge."

Another visitor is mentioned who sent up his card, and, on being admitted, politely inquired of the lecturer "if he could engage him for half an hour?" On being asked for what purpose he proposed such an engagement, he replied that it was to read a poem he had written, and get his (Mr. Fields's) opinion upon it.

In the European letters there are one or two things which are new to us, as, for instance, the inquiry attributed by Leigh Hunt to Shelley: "Hunt, we write *love* songs, why shouldn't we write *hate* songs?" Shelley, it seems, disliked the second Mrs. Godwin particularly, believing her to be untrue; and when obliged to dine with her, he used to say that he "would lean back in his chair and languish into hate." It is interesting to notice that Leigh Hunt, who certainly did not lack powers of description, candidly confessed to Mr. Fields the total impossibility of describing his fellow-poet: "No one could describe Shelley; he was always to me as if he were just arrived from the planet Mercury, bearing a winged wand tipped with flame"—a sufficiently vague picture.

It is not as a literary man, but as a publisher, that Mr. Fields is likely to be remembered. As a lecturer, he was successful mainly because he had already created an audience which was ready and waiting to welcome him. In the same way, subjects were ready to his hand, and he had a gift of expression sufficient to meet the by no means lofty standard of ordinary lecture-audiences. As a publisher, he was one of the first men in this country to see what all successful publishers now recognize as a fact, that the great secret of success in the trade lies in playing the part of a benefactor to men of letters. It is only in the present century that this new type of publisher, of which Mr. Fields was a distinguished instance, has become common or even known. The old theory of the relation between publisher and author, as handed down to us by tradition, is that they necessarily stand in a hostile attitude to one another. The author of literary tradition, always in straits for money, is preyed upon by the publisher, who, purchasing from him the products of his mind at a price dictated by his necessity, reaps a large fortune by means of the genius of his victim. The old story of the sale of the copyright of 'Paradise Lost' for £5 is still told as an illustration of the helpless position of writers of the first magnitude, and in some quarters the publisher is still regarded as much the same harpy he was represented to be in the days of Dr. Johnson and Grub Street.

The fact is, probably, that he never was a harpy; that in the last century the reading public was so small, the cost of publication so great, and the means of reaching and developing it so few, that capital was not easily attracted to the business, and that the publisher himself was usually a man of resources altogether too small to justify any great liberality toward unknown literary men bringing their wares for sale. He had no monthly magazine in which he could test the interest of the public in what was offered, nor was there any cheap press which made it part of its daily business to attract the attention of mankind to whatever was going on in the way of intellectual work. In most cases he could not have known in the least, except by mere guesswork, whether the book offered him would sell or would not sell; and if he generally drove a hard bargain, it was probably because he was obliged to. No statistics have ever been collected as to the fortunes which were imagined to be made by publishers during that early period, and, in the absence of any evidence on the subject, it is fair to assume that the whole theory was founded in error—a natural error, which sprang from the peculiarly humiliating position in which authors then found themselves: forced to choose between the supercilious benevolence of a patron and the closeness of a mere man of business. If the publishers of the period before the invention of the cheap press and monthly magazine really ground the face of the poor author, and amassed large sums of money by doing so, is it not probable that the names at least of these great pirates of the intellectual world would have been handed down to us, and that some record would have been preserved of their great fortunes and their luxurious and comfortable lives—some such record as will unquestionably be handed down to future generations of the publishers of our time?

The modern publisher, of whom Mr. Fields

may stand as a fair representative, really combines some of the functions of the old patron and the old bookseller. The business of his life, which he discharged with great credit to himself, with remarkable business sagacity and skill, was not simply to drive bargains with authors for their copyrights, but to furnish them with the means of reaching the public, and to make them profitable to himself by making the relation so established profitable to them. For this purpose he employed capital and made ventures with the same liberality and willingness to take risks that mark all modern commercial undertakings. He did not merely make use of established reputations, but he endeavored to foster and stimulate these, and even to call them into existence, where creation was possible. In looking over the lists of "tributes" and personal sketches contained in Mrs. Fields's volume, one is struck with the fact that many of the persons who here testify to her husband's excellent qualities are writers who but for him, or some publisher like him, would probably never have been in a position to record opinions of this kind at all. For the extension of the peculiar kind of business of which Mr. Fields made so great a success, the possession of a monthly magazine was an enormous and at the same time a novel advantage. In a new country, devoted chiefly to material pursuits, but with a very high general level of education and intellectual interest, and in which the pursuit of literature consequently inspires a somewhat abnormal respect, the pages of a magazine like the *Atlantic Monthly* in its early days were a sort of authoritative documentary announcement of the names of the writers entitled to a position in the American literary world. To obtain a place on the list was itself a great advantage to a young writer. To give him a place if he had any merit, was a great advantage to Mr. Fields, and the ratification of the compact between them amounted to a sort of engagement by which the publisher took the place of a literary manager to the young author, and guaranteed, as it were, that he really was an author. To make a long story short, he became, as the pages of this volume abundantly testify, the benefactor instead of the despoiler of the American literary man. All great publishers of modern times occupy more or less this relation to the literary producer, but Mr. Fields deserves especial notice among them all as having done his work more thoroughly and completely than most of his competitors.

Mrs. Fields has given an excellent impression of her husband's social peculiarities in her memoir. He was neither a scholar nor a genius, nor was he, as he seems himself to have thought, a humorist, although he had a keen enjoyment and appreciation of humor which brought him to the point of successful imitation; but he was in private life a thoroughly good companion—amusing, cheerful, vivacious, an excellent storyteller, with an immense fund of anecdote. He had, too, the invaluable art of making those with whom he was thrown as much at their ease as he was himself, being able to lead or follow in conversation. His social ambition seems to have reinforced his business skill, and enabled him to draw distinguished men into relations with him which had their natural business results. No business man in this country had, probably, so distinguished a circle of literary friends all over the world.

EIDLITZ'S NATURE OF ART.

The Nature and Function of Art, more especially of Architecture. By Leopold Eidlitz. New York: A. C. Armstrong & Son. 1881.

"At the present time," says Mr. Eidlitz, "it becomes a serious question whether the rapid progress of thought, and the more general acceptability of new ideas, does not demand a philosophic development of art expression of ideas which will keep pace with general progress, in order to afford to the masses that instruction which can by them be derived only from works of fine art."

With this proposition in view, Mr. Eidlitz has been bold enough to enter upon the difficult field of æsthetics, and to survey the relations between art and modern civilization not merely as a speculator, but as a reformer. The five hundred pages of his book bear witness to his own consciousness of the serious nature of his task, and he has brought to it a vigorous and uncompromising spirit and the courage of strong convictions. His argument is that art should resume its ancient functions as an instructor of the people, and, to this end, that it should lay aside its accumulated weal.h of traditions, should virtually cease to be scholarly, and start from a basis of pure reason. He follows in the main the lines laid down by the greatest writer of the century on the theory of architecture, M. Viollet-le-Duc, and he accepts without hesitation and with all their consequences the purist dogmas of Pugin, Ruskin, and the other modern literary reformers of art, so far as they rest upon the practice of developing forms of art out of structural necessities, as in mediæval monuments. But he does not fail, on occasion, to differ rigorously even from those in his own camp. He exalts the function of art as a practical method of ennobling life and of educating the masses through their emotions, not only in painting, sculpture, and architecture, but in dress, manners, ceremonies, and rituals. He candidly declares that in this service taste is a blind and dangerous guide; that archæology misleads; that the artistic instinct or feeling is to be distrusted, and that enthusiasm is seriously detrimental in the pursuit of fine art; moreover, that the expression and embodiment of ideas in matter, through certain conscientious and intellectual processes of analysis and development, constitute the sort of art which alone is fitted to instruct mankind and to adorn the civilization of the nineteenth century.

The true interest of this volume, however, arises not from its essays in the domain of pure æsthetics, but from the fact that its author, not a mere bookman and theorist, but an architect of established repute, held in high esteem by the profession and entrusted with important work, desires to look beneath the specious and prosperous surface of things, and, with a mind sharpened by professional observation and practice, to dig deep among the roots of art. This spirit of investigation is in full accord with the genius of our time, and, whatever heresies may thereby be evolved, however our convictions or prejudices may be assailed by new and uncompromising deductions of philosophy, there is health in the attempt to get at the truth, if only it compels architects—as this work assuredly must, if they will read it—to a serious work of self-examination.

The portions of the book by which their interest would be most naturally attracted are such as deal with architecture pure and simple, with monuments, form and construction, proportion, style, analysis, criticism, and professional education. These constitute two-thirds of the volume, and bear the marks, always interesting, of a mind practised in habits of design; but they are overweighted by the ponderous logic of the other third, dealing with definitions of art, beauty, ideas, and the ideal—speculative themes, which, however ingeniously discussed, disturb the balance of the work, and distract the mind from that part of it which is the natural and proper function of the author. If these incongruous portions could be eliminated, and if the essential part of the text could be purged of its unnecessary involutions, and of its tendency to abstract speculation, which perplex the student and often make the argument too transcendental in thought and statement for the service of practical and busy men, the work would doubtless have its due effect on a profession which, whatever may be said to the contrary, we believe to be at this moment eager to be guided by convictions instead of prejudices.

Mr. Eidlitz's attitude toward his brethren in the craft is by no means conciliatory. He follows the prevailing fashion among theorists and doctrinaires, and has no extenuation to offer for the condition into which modern architecture has been brought by their efforts. He arraigns them because they are led by taste, which is shallow, and fashion, which is superficial; because they have constituted themselves the conservators of barren traditions which have no essential relationships with modern necessities and modern methods of construction; because they suffer the engineer to lead them in progress, and are willing to embarrass themselves with the guardianship of antiquated formulas. He is never weary of accusing the classic orders of being a fruitful source of architectural corruption, and he even speaks disrespectfully of "the poor Corinthian capital." But when the profession, thus betrayed by one of its own members, and asked to surrender its inheritance of beautiful things, looks into these pages for a compensation, it finds a bare philosophic dogma—viz., a work of architecture is the expression of an idea through the just modelling of construction; it is a thought expressed in matter by logical development; and so on. Although this proposition has an ascetic tinge, which at first may repel the student, he will probably find that essentially it is a truth which lies at the basis of constructive expression in architecture as he is accustomed to regard it, and that the substance of it has been taught him in the schools. Indeed, any conscientious practitioner of architecture is ready to explain, when any one asks, why it is that he has chosen a formula of pilasters and entablature, or of buttress and arch, to express the nature and quality of his structure; why it is that he has concealed his iron and wooden construction with an uninflammable envelope, and why he has used or failed to use pinnacles, balustrades, or any other feature of utility or decoration. You will often find him a reasonable creature, and his works upon the street, whether expressed in terms of Gothic or Renaissance, not infrequently capable of logical defence. But Mr. Ruskin, Mr. Pugin, Mr. Eidlitz, and a score of literary amateurs besides, assure the modern architect that there is no health in him unless he turn his back upon all the other architectural expressions of history, and, by following the logical methods of the mediæval cathedrals, develop in his work "an idea in matter." None of these earnest thinkers have undertaken to enforce this doctrine of exclusion and of philosophic design by the only method which can be appreciated by the architect and bear fruit—viz., by graphic statements illustrating to the eye their processes of composition. The essays of the brilliant Viollet-le-Duc in this direction are of exceeding interest to the architect, are very brave and ingenious and marvellously presented, but they have proved to be impracticable, and they have had no appreciable influence upon the practice of architecture. If Mr. Eidlitz should set forth his own logical processes in the same manner, he would commend his theories to the profession he addresses, and perhaps clearly illustrate that the development of construction is the only safe guide to architectural design; but we do not believe that he could in this or in any other man-

ner logically exclude from the repertory of the modern architect any part of the precious inheritance of beautiful forms, whether classic, mediæval, Saracenic, Indian, Japanese, or other, which are his peculiar property, which cannot be concealed from him, which enrich him far beyond the wildest dreams of any of his predecessors, which constitute alike his greatest privilege and his greatest danger. By the vastness of his inheritance, he is compelled to a labor of comparison and selection, which if he is wise will enrich his legitimate resources of design, but which if he is foolish will embarrass him and make him a spendthrift. As he cannot turn his back upon his wealth, modern architecture must inevitably be eclectic. This constitutes the fundamental distinction between old and new work. By this intelligent catholicity, under the guidance of just laws, and recognizing all new developments in mechanical forces, and all new discoveries in material, the complicated conditions of modern buildings can receive the most characteristic development—a result impossible to be obtained by any system of exclusion, however philosophic.

Mr. Eidlitz very happily says that "architecture tells us as much of Greece as Homer did, and of the Middle Ages more than has been expressed in literature; yet," he adds, "it has been silent since the thirteenth century." The latter proposition is picturesque, but it is not true. It is a statement frequently repeated in other forms in this book. It needs but a glance to show that the function of architecture as a recorder of history has never been exhibited with greater success than in setting forth the spirit of the successive reigns in France and England, for example, from the thirteenth century to the present time. There is a characteristic modification of forms in the architecture respectively of the Stuarts, of Queen Anne, of the Georges, and of Victoria, as in that of the successive Louises of France and in that of the Empire. The historian will one day recognize these as the most significant exponents of the spirit of these modern civilizations. Nay, he will find, even in the much depreciated work of the present century, no doubtful indication of the sort of people we are. Certainly the indication would be clearer if the practitioners of the present time had been taught to eliminate the personal element from their work; they would be better performing their function as educators if they were more prone to observe principles than fashions, and they would produce better art if, in their use of historical forms, they better understood how to make them the expression of the structural conditions. Still, we have an art of the nineteenth century, and it is not entirely despicable.

Mr. Eidlitz frequently insists that a proper use in art of old forms under new conditions is a practical impossibility. But it is evident enough that old forms are applicable to new work to the extent that new constructions are similar to old constructions; as the construction is modified the form is modified with it, and the old type is thus gradually merged into a series of new expressions. The process is perfectly legitimate. No philological purist would venture to say that the only language fit for poetical expression is the pure Anglo-Saxon, and that the polyglot inheritance out of which is compacted the modern English tongue has only served to render it useless as the clothing of lofty thought. All human knowledge advances from the work of the past by processes of deduction, growth, and assimilation. Architecture is no exception to this rule, and, *à priori*, it is not scientific to assume that the experiments and studies of successive generations of artists, through nearly five centuries since the Renaissance, are a mere waste of human endeavor, unworthy to be counted by the student among the treasures of experience. It is more in accordance with the thoughtless prejudice of the doctrinaire than with the prudent and educated conservatism of the professional student to assert that the formula of pilasters and entablature, which is the basis upon which the artists of the Renaissance lavished such boundless wealth of beautiful invention, is not an expression of structure as direct as the buttress and pinnacle; that a window frame may be decorated by mouldings in chamfer and not by mouldings in relief; that it may be covered by a drip moulding or by a canopy, but never by a cornice or a pediment. It must be admitted that the architects of certain periods of the Renaissance, like those of the decadence of the Gothic, have made serious errors; have often made ornament more important than construction, often quoted the classic orders too literally or distorted them too capriciously; that they have misused their elements and misunderstood the essential principles of design; but surely their preponderance of brilliant work is not to be obliterated from the memory of the student because of such offences.

In short, what the modern student of architecture needs is a grammar, not an *index expurgatorius*. To the extent that this prominent architect has, in the work before us, lent his powerful assistance to the fundamental fallacy of exclusion, his book is harmful, unphilosophic, and misleading. But there yet remains enough of sound reasoning and vigorous statement to make it worthy of respectful consideration and a notable addition to the literature of art. Mr. Eidlitz's views of the status of the architect in relation to competitions, of the use and abuse of drawings in architectural education and experience, of proportion and modelling, are wise and well stated, and need to be formulated in just that vigorous, not to say aggressive, style which makes Mr. Eidlitz an unpleasant opponent in argument, but a tower of strength when he is on the right side.

BOOKS ABOUT THE STAGE.

The Jeffersons. By William Winter. With illustrations. [American Actor Series.] Boston: J. R. Osgood & Co. 1881. 12mo, pp. x.–252.

Hours with the Players. By Dutton Cook. London: Chatto & Windus; New York: Scribner & Welford. 1881. 8vo, 2 vols., pp. 277, 263.

Genevieve Ward, a biographical sketch, from original material, derived from her family and friends. By Zadel Barnes Gustafson. With portrait. Boston: J. R. Osgood & Co. 1882. 16mo, pp. xvii.–261.

Le Voyage de Sarah Bernhardt en Amérique. Par Marie Colombier. Paris: Dreyfuss; New York: Christern. 1881.

MR. HUTTON'S "American Actor Series" began well with Mr. Barrett's 'Forrest,' and is now worthily continued by Mr. Winter's 'Jeffersons.' With the possible exception of the Kembles, of whom at least four generations adorned the stage, the Jeffersons are the farthest-reaching of histrionic families. Thomas Jefferson (1728[?]-1807) was a friend and fellow-actor of Garrick's. His son, Joseph Jefferson (1774-1832) was one of the best of the early American actors, a band of very remarkable ability. His son again, another Joseph Jefferson (1804-1842), and his daughter, Elizabeth, who still survives, held honored positions in the American theatre. In the fourth generation we find the present Mr. Joseph Jefferson, the third of his name, which he has made famous everywhere by his beautiful performance of *Rip Van Winkle*. Acting with his father now as the pert *Fag* of the "Rivals" is a son of Mr. Joseph Jefferson, who bears the name of the founder of the family. It is the story of these lives which Mr. Winter has undertaken to tell, and in telling it he has occasion to set forth much of the entertaining, instructive, and little-known history of the earlier American stage. We imagine that many readers of this volume will here make their first acquaintance with John Bernard, W. B. Wood, F. C. Wemyss, Sam Cowell, and the other actors who have recorded the incidents and accidents of their theatrical career with good-humored garrulity. For lack of a Doran, the annals of the American stage remain unwritten; and yet, in due proportion, they are as important as the annals of the English stage. Sixty years ago the Chestnut Street Theatre of Philadelphia had a stock company second only to those of the patent houses of London, and much stronger than any now in this country or in England. Mr. Winter writes of this period after a careful study of the existing records, and his work shows a most conscientious zeal for exactness. We almost question whether he is not too liberal with his citation and notes; but this is so rare a defect in a histrionic biographer that we may pardon the slight impediment to the narrative. Mr. Winter, at any rate, has read too many such biographies to omit in his turn one of the most indispensable adjuncts—the list of parts played by each actor, from which alone we can judge fairly of his position and powers. There is also an ample index of fifty columns. There are nine illustrations of varying value, the best being a *Rip Van Winkle* from *Lippincott's*, and a *Bob Acres* from *Scribner's*. We have noted two misprints and one omission. The former are on p. ix., "1869" for "1879," and on p. 129 (note), in which Beaumarchais's comedy is called "Le Barbiere de Séville"; and the latter is in the list of parts (p. 194) acted by the present Mr. Jefferson within the past fifteen years, a list which should include *Tracy Coach* in "Baby," played in San Francisco about two years ago.

Altogether Mr. Winter's work is a thorough one, abounding in good criticisms and anecdote. Two or three of the incidents deserve quotation. Macready makes an appearance in these pages only to show his arbitrary temper, while Forrest reveals his early kindliness and uprightness. When Macready came to act in Philadelphia in 1826–7, Jefferson (the second) met him at dinner at the manager's the night before the first rehearsal. Being an invalid, the comedian came upon the stage the next morning with a cane. Macready called the prompter, and commanded him, "Tell that person to put down his cane!" Outraged at this attempt to overbear him, when a polite word of inquiry would have sufficed, Jefferson answered, "Tell Mr. Macready that I shall not act with him during his engagement," and he left the stage (p. 76). A few years later Forrest unwittingly happened to play at the Walnut the night Jefferson was to take his benefit at the Chestnut. He wrote explaining, and offering to give the old comedian a night—an offer which was not then accepted. At a later time, when Jefferson was "managing in Washington, Forrest came there as a star, and he then actually refused one night's emolument. He had said that he would play one night for Jefferson, and he insisted on keeping his word" (p. 121). One more anecdote, this time of the present Mr. Jefferson, and we have done with one of the few really scholarly books ever written about the American stage. Mr. Joseph Jefferson once acted *Bob Brierly* in the "Ticket-of-Leave-Man" at Hobart Town, in Tasmania, before an audience that included more than 600 ticket-of-leave-men!

Mr. Dutton Cook's 'Hours with the Players' has a somewhat higher aim than his 'Book of the Play,' and hits its mark with equal accuracy. It is a collection of brief biographies, the

nucleus being a set of sketches of eight of the chief performers at the original production of the "School for Scandal," a little over a hundred years ago. These were the "creators," as the French phrase has it, of *Sir Peter* and *Lady Teazle*, *Sir Oliver*, *Joseph*, and *Charles Surface*, *Sir Benjamin Backbite*, *Mr. Crabtree*, and *Mrs. Candour*. These eight chapters are preceded by an account of the affray between Will Mountfort and Lord Mohun—in which Mr. Cook fights against both Macaulay and Thackeray in defence of Lord Mohun's innocence and Mrs. Bracegirdle's character—and sketches of Peg Woffington and Perdita Robinson. In the second volume Mr. Cook considers the careers of Mr. and Mrs. Baddeley, the marriage of the young Irish actor, O'Brien, to a daughter of the Earl of Ilchester (a marriage which Thackeray paraphrased in the 'Virginians'), the wooing of Miss Smithson by Hector Berlioz, the lives of J. B. Booth, Farren, Mrs. Glover, C. J. Mathews, Rachel, Charlotte Cushman, and Charles Kean, and closes with a note on Charles Fechter. Many of these essays are admirably done. One gets a better idea of C. J. Mathews's life from these fifty pages of Mr. Cook's than from the bulky tomes which Charles Dickens compiled. Many of the later actors Mr. Cook has himself seen and is able to criticise at first hand. The others he reconstructs by the aid of contemporary criticism and the many stage memoirs. He has the sense of proportion and the gift of interesting, is intelligent and unprejudiced, and is as widely read in the dramatic *ana* of England and France as Mr. Winter is in the dramatic *ana* of England and America. Of the mass and variety of American dramatic biography Mr. Cook has evidently no conception. His essays on the elder Booth and on Charlotte Cushman are written with an evident desire to be just and to be as full as possible; but they are little more than abstracts of Mr. Gould's and Miss Stebbins's volumes, supplemented by a few English authorities. There are reflections on the early American stage (ii., pp. 60, 145, 153, for example) which Mr. Cook would doubtless not have made had he been familiar with the matter collected in Mr. Winter's book, or with the authorities from whom Mr. Winter derived it. Despite this blemish, which affects mainly the two American chapters, we take pleasure in recommending 'Hours with the Players'; it gives decidedly the best account to be found anywhere of many of the chief figures of the British stage during the past century and a half.

Mrs. Gustafson's life of Miss Ward is a very queer book. Just how queer it is may be best shown by a schedule of its contents. It begins with a song, "Genevieve," written by Mrs. Gustafson, followed by the music composed for it by Miss Philp; after this comes a preface explaining how and why the book came to be written; and then a letter of Ristori's. This is all preliminary and not paged. The book itself begins with an epigraph quoted from Miss Elizabeth Stuart Phelps: "I can conceive of few things more stimulating to a woman than a gifted mother," after which we have two score pages about Miss Ward's mother and brother, and their doings in Paris during the siege, while Miss Ward herself was in New York. Next is a "Song of the Serf," which we are informed was "written to Miss Genevieve Ward, during her visit to Florence, by Buchanan Read." Then, at last, the real biography begins with five pages (41–46) on Miss Ward's birth and childhood, and twenty-four pages (47–71) describing her forced marriage with the Russian Guerbel—an account, by the way, which differs somewhat from that given in the pamphlet biography circulated in New York when "Madame Guerrabella" was about to appear here in opera some fifteen or more years ago. Next is a page of "Lines to Genevieve Ward, written in Florence," and signed Buchanan Read. Thirty pages more (75–104) tell us of Miss Ward's musical education, of her successes as an operatic singer under the name of "Guerrabella"—Italianized from Guerbel—and of the loss of her singing voice. A sonnet in French by M. Charles Boissière precedes an account (pp. 107–143) of her studies for the dramatic stage and her appearances in Paris and London. At least ten of these thirty-six pages are filled with extracts from newspaper articles, and five more with letters of compliment and congratulation, of which the only one of consequence was written by M. Regnier. After another sonnet ("Katherine," by Mr. G. W. Peters), we are told (pp. 147-169) of Miss Ward's professional visit to America in 1878. Another chapter (173-208) sets forth the production of "Forget-me-Not," with elaborate publication of letters (evidently meant to be private) and of random criticism copied from the scrap-book which is an actress's favorite possession. Strangely enough, the most discriminating praise Miss Ward ever received (to our knowledge) is not quoted. It appeared in *Scribner's* in an acute and incisive anonymous article on the "London Theatres." The Appendix (pp. 209–254) is a reprint of the legal documents in the case of Genevieve Ward, plaintiff, against Theodore Moss and Lester Wallack, defendants—a case which was still in the courts. Last of all is an "Index of Names," not of persons and plays mentioned in the book, but "of families that have intermarried with the Ward family and its descendants of various names, as given in 'The Ward Family,' published by Samuel G. Drake, Boston, 1851." This last eccentricity is typical of the helter-skelter composition of the whole book. The genealogical reference, however, serves to remind us of a highly amusing anecdote (p. 93) of "Tom" Corwin's calling on Mrs. Ward, claiming a relationship by marriage, and declaring that he had just been visited by two Hungarian officers, sent by the Hungarian people to offer him the crown of Hungary, because he was of the family of the "good king Matthias" Corvinus! Altogether the book is odd in its English, its construction, and still more in the taste it displays. It is greatly to be regretted that a lady of as many accomplishments as Miss Ward should have allowed so silly and puerile a production to be published as by authority.

This book about an American actress was published shortly after one about a French actress, and as the one should have been called 'The Autobiography of Mrs. Ward, with passages from the life of her daughter, Miss Genevieve Ward,' so the other might be entitled 'Adventures of Mlle. Colombier in America, with incidental anecdotes of her former friend, Mlle. Bernhardt.' Save me from my friends, must be Mlle. Bernhardt's fervent wish. She has been often abused, but never so neatly shown up as by Mlle. Colombier. Her venality, her greed, her carelessness of her art, her vanity, and many another of her little sins are here set down, not in malice, but merely as facts. Mlle. Colombier does not think much of these United States or of the inhabitants thereof. In this respect she resembles the authors of 'Offenbach en Amérique' and 'Rachel au Nouveau Monde.' M. Beauvallet, however, who wrote of Rachel's visit, did find one American actor to praise—Mr. William Warren, of Boston. Mlle. Colombier finds none, and falls foul of Miss Clara Morris with feminine ferocity. Thirty or forty caricatures from *Puck* and its now defunct rival *Chic* adorn Mlle. Colombier's pages.

MORSELLI ON SUICIDE.

Suicide: An Essay in Comparative Moral Statistics. By Henry Morselli, M.D., Physician-in-Chief to the Royal Asylum for the Insane, etc. Revised and abridged by the author for the English Version. New York: D. Appleton & Co. 1882. 12mo, pp. xi.–388.

In a graceful preface, Professor Morselli says that he has authorized the present translation, which forms the latest number of the International Scientific Series, chiefly from the desire of making it known to foreigners that "Italy also works in the new method of philosophy." One need not look further than the table of contents to perceive that these studies have taken their intellectual initiative from "the great country of Shakespeare and Darwin." Dividing his subject into two parts—analysis and synthesis—he discusses, under the first head, the increase and regularity of suicide in civilized countries; the "cosmico-natural influences," such as climate, season, even the hours of the day, which influence suicide; the ethnological and the social influences; the biological, social, and psychological conditions of the individual; and the laws and the individual conditions which determine the methods and the places of suicide. In the second part of the work (which has been curtailed in the present translation) Dr. Morselli indicates, according to the laws of evolution in civilized societies, the rationale of the facts that have been discussed, and says that the cure of suicide is "the formation of character."

To give the substance of Dr. Morselli's exposition would be impossible, within our limits even in an abstract; for the work is itself the abstract of most voluminous data, gathered during many years by many observers, official and volunteer, from nearly all the countries of the civilized world. It is seldom that so large a mass of statistics is so well and carefully handled as in this book, not only as to the clear presentation of the data, but also as to caution in their acceptance and a clear perception of modifying data. The number of European suicides is very great (Dr. Morselli treats but incidentally of the American); and the almost overwhelming array of data is treated with equal prudence and lucidity, as we hope to indicate by such analysis as can here be made.

"Suicide," says Prof. Morselli, "appears less susceptible of positive appreciation than all other expressions of the human will. The character which classical paganism attributed to suicide was simply individual: the famous phrase of the Stoics, *Mori licet cui vivere non placet*, is nothing more than the formula of this individualism. Religion and laws have never risen to the consideration of this crime under the more generic aspect of a tendency certainly hurtful, but one connected with the natural development of society. It was necessary to collect all the facts, to unite them, to consider their analogies and differences; to do, in short, precisely the reverse of what philosophy had done."

What are some of the main data which the analytic method gives us? Suicide is becoming more frequent with each quinquennium (table iii.) in all parts of Europe where statistics have been taken. The only exceptions are during 1851–5 and 1866–70, in Norway and Denmark respectively. Since 1865 suicides have been more frequent in the kingdom of Saxony than in any other state; for the ten years (1866–75) they numbered 298 per 1,000,000 yearly. At the other extreme of the scale stand Italy and the Slavs of the south, with 35 and 20 suicides per 1,000,000 respectively. In England the ratio has long been remarkably steady. From 1836 to 1875 it rose only from 63 to 66 per 1,000,000; but Professor Morselli warns us that in England "many suicides figure in the category of 'mental alienation.'" The north of Europe, from the time of Tacitus, "has been acknow-

ledged as the classic ground of suicide"; and from south to north the suicides increase as a rule with the latitude. Italy, Spain, and Portugal give the minimum proportions; the maximum occurs at 50° north latitude. The area of predilection for suicide crosses the Continent from the northeast to the southwest, and lies between the isothermal lines of 7½° and 12½° centigrade.

"Although the influence of climate cannot be detached from the social and ethnical elements, it is, in all probability, the most powerful of them all. From the northeast of France to the eastern borders of Germany a *suicidigenous* area exists, where suicide reaches the maximum of its intensity. The influence of Paris, notwithstanding its great intensity, does not extend to the side of the Loire, the Meuse, and the Ardennes; in all the rest of western Europe the other point of suicidal influence is formed by the purely Germanic countries."

With regard to orography, suicides are most frequent where the country is low; to hydrography, in the region of the great rivers; to geology, in alluvial countries of the more recent epochs (Denmark, the Germanic plain, the Île de France). By seasons and months, suicide is most frequent when the earth is in aphelion, least frequent in perihelion; June is the favorite month for suicide; in December it is the least frequent. For the influences of meteorological conditions on suicide no data exist; but it has been shown that the accessions of madness and epilepsy coincide with atmospheric and electric disturbances. "It is most probable that the moon exercises more or less influence on suicides, as it does on fits of madness and epilepsy, which are generally aggravated at the time of the waning moon (full moon and second quarter)." In this period, according to Schiaparelli, cloudy and stormy weather prevails. As to calendar divisions of time, Brierre de Boismont has shown that in France suicides are most frequent during the first ten days of the month, and especially frequent on the first and second; and of the week days, on Tuesday, Thursday, and Monday.

"Saturday," Professor Morselli remarks, "is the favorite day of those who live by manual labor, the day on which the workman receives his pay, the day of joy, of material well-being, of moral quiet; and this content of mind lasts through Sunday, on which day the gluttonous, dissipated man wastes the money earned during the week. The new week begins with satiety, remorse, intolerance of work."

Women, however, commit suicide most frequently on Sunday—an unexplained fact of much psychological interest. As to the time of day, the distribution of suicides is not parallel, as might be expected, with the hours of silence, quiet, and isolation; it favors the active part of the day, and this is a reason why the months in which the daylight is longest—June, May, and July—show the largest number of suicides. The hours of the maximum are from 6 A. M. until noon.

Coming now to ethnic influences, Professor Morselli says: "The purer the German race, the stronger the Germanism of a country, the more it reveals in its psychical character an extraordinary propensity to self-destruction. . . . Slavism tends to lower the average of suicides as Germanism elevates it." With regard to the aggregate of Europeans, the frequency of suicide has a nearly definite relation to the stature, though it is not pretended that this is anything more than an incidental relation. One who starts from Norway, where the maximum stature is found, and passes "over England, Belgium, and France, or over Denmark, Germany, and Austria, to reach Sicily or Spain, will perceive the stature of the population diminish progressively from 1.72 metres to 1.60, and in general, also, the averages of suicides from above 100 to below 20. But if the various nations are considered separately, this connection between stature and suicide is often wanting," though "the frequency of suicide in the various parts of Italy generally is in a direct ratio with stature," and it is most frequent among the brachycephalic races — Ligurians, Venetians, Modenese, Lombards, and Livornese.

Among social influences, that of religion has a noticeable influence upon suicide; its frequency "is in states of Catholic religion, 58 per million, in Protestant States 190, in Greek 40; but here comes in the great influence of Slavism." In Bavaria, Prussia, Würtemberg, and Austria, the average among Protestants is 102.7; among Catholics, 62.3; among all other Christians, 36.2; and among the Jews, 48.4 per million. "Protestantism is an eminently mystic religion, tending to develop the reflective powers of the mind and to exaggerate the inward struggles of the conscience. This exercise of the thinking organs, which, when they are weak by nature, is always damaging, renders them yet more susceptible of morbid impressions."

As to intelligence, it is those countries and classes of individuals which have the highest standards of general culture that manifest the strongest suicidal tendency. "The Germanic peoples are more cultivated than all the other European nations. . . . Prussia stands first, both as to education and suicides; France comes next, second in both characteristics"; last come Italy and Hungary. There is a direct relation between the number of suicides and the school attendance and the number of newspapers (table xviii.). The relation of public morality to suicide is not a definite one, so far as researches have gone; that of criminality is little more so, though the conclusion has been reached that when the annual average of suicides is on the increase, a synchronous increase of crime also generally occurs. Economical and political causes, such as short crops, high prices, a dense population, everywhere multiply suicides. The states which have the most railways, as well as newspapers, have generally the most suicides. City life favors them; Paris has an influence in this respect which extends into neighboring departments, and London and Berlin have always had more suicides than the other parts of the state.

Turning to the individual influences which determine suicide, Professor Morselli finds that sex and age are the most important. In every country the proportion of suicides is three or four men to one woman. The Spanish women, however, have a strong suicidal tendency, perhaps attributable to the force of their passions; Italian women, in a similar climate, manifest no such special tendency. In each sex suicide increases in direct ratio with the age (figures 5, 6) until about the sixty-fifth year. It is more frequent at the critical periods of life; and the diminution of suicide among the old "belongs to the weakening of character and to the want of energy natural to the last period of life." Taking both sexes together, the ages between fifty and sixty-five are those of the strongest suicidal tendency. These estimates are founded, of course, upon the numbers of the population surviving at the different ages in question. The curve constructed on the actual number of suicides reduced to percentages (figure 4), is regularly parabolic; while "in each of the sexes separately considered the curve becomes analogous to the aggregate of the whole population. . . . Two periods in life are characterized by a special inclination toward suicide: the first from youth to complete manhood; the second, during manhood, extends to almost the whole of old age. . . . The diminution in the last period of life is much more irregular than in all the other conditions: strongest in Würtemberg, less strong in Sweden, Belgium, and England, very weak in France, Bavaria, and Italy; failing almost entirely in Denmark, Saxony, Austria, and perhaps Prussia." Suicides in childhood are exceptional: "There are, however, suicides committed by mere infants of five and even three years old." In the French statistics of the eight years 1866–68, 1870–72, 1874–75, there are registered thirty-eight suicides of children of thirteen years, eleven of twelve, sixteen of eleven, six of ten, four of nine, three of eight, and eight of seven years only

After sex and age, the civil status is the most important of the individual influences in question. In a striking graphic delineation (p. 233), Prof. Morselli shows at a glance the relative influence upon suicide, for both sexes, of the civil status and of the family, a shaded column representing each of the following conditions respectively: For Italy, the unmarried, the married, the widowed; for France, the married with children, the childless married, the widowed with children, and the childless widowed. In Italy the married men and the unmarried women (in all cases taking equal numbers of the classes compared) commit suicide least frequently, the widows and the widowers the oftenest; in France one out of ten of the childless widowers commits suicide, and one in forty-eight of the childless widows; while of either sex the married with children are the least prone to suicide. Still, says Prof. Morselli, "the proportion of married women who inflict death upon themselves deserves all the attention of psychology; it denotes that woman does not often find in matrimony the happiness of her youthful dreams."

The influence of professions upon suicide is a study of difficulty, because accurate and uniform *professional* censuses of population are still rare; even for Prussia no exact conclusions can be reached on this point, though the most ample and precise information on the professions of the suicides is given. Wagner's figures on the million for the French industries are as follows: Millers, 97; bakers, 116; butchers, 164; tailors, 191; shoemakers, 109; workers in textile industries, 176; in metal industries, 260 In Italy those who are skilled in "food industries" are the most prone to suicide, and, on the other hand, those of the highest culture—literary and scientific men. Both in Italy, France, and Prussia, "the known disposition of doctors to become mad (Verga)" considerably swells the return of suicides. Soldiers, too, and especially the officers, are prone to suicide; and the tendency augments with the length of service.

The means of suicide would seem to be a matter of voluntary choice; but this so-called voluntary action is as regular and uniform as the phenomena of birth and death. Each country has its predilections, but in all the rope is chosen most frequently, and drowning next; then firearms, then weapons which cut or stab, and then all other means. Even the localities selected by the suicide are determined by constant laws, which are here studied with the author's usual thoroughness.

In the second part of the work Dr. Morselli gives a brief explanatory synthesis of the subject which he has treated so elaborately. "Suicide," he says, "is an effect of the struggle for existence and of human selection, which works according to the laws of evolution among civilized peoples." "Suicide is not an act depending upon the personal spontaneity of man, but certainly neither less than, nor unlike, ordinary births and deaths, crimes, or mental diseases, is a social fact." "The idea of free will in the human microcosm agrees with that of the doctrine of chance in the universal macrocosm (Herzen)." A lecturer upon suicide said recently that his subject had in all probability been seriously meditated, at one time or another, by each

one of his hearers. It is certainly one of general interest, and Prof. Morselli's treatment of it, at once an attractive and a thoroughly scientific one, will draw to his valuable book the attention it deserves.

The Formation of Vegetable Mould through the Action of Worms, with Observations of their Habits. By Charles Darwin. With Illustrations. New York: D. Appleton & Co. 1881. Pp. 326.

ONE of the secrets of Mr. Darwin's success in interpreting nature lies in his ability "to sum up the effects of a continually recurrent cause," however slight the momentary results may appear. The means by which he has produced such a marvellous change in modern modes of thought respecting the origin of species are similar to those used with such effect forty or fifty years ago by Lyell to establish a similar principle respecting the action of inanimate forces in geology. The volume before us—the result of forty years of careful observation—would have delighted the author of the 'Principles of Geology,' for it illustrates in a striking manner the enormous geological effects which may be produced by a cause supposed to be insignificant, but which, as usual, turns out to be *unnoticed* rather than insignificant. Mr. Darwin estimates that there are in gardens 53,767 worms to the acre, and that they would weigh 356 pounds. Having four or five gizzards apiece, each worm is able to digest a large amount of coarse food, and to eat his "peck of dirt" in a brief space of time. Careful weighing of the "castings" brought to the surface by worms shows that they sometimes amount to sixteen tons per acre annually—sufficient to produce two inches of so-called "vegetable mould" in ten years. Since worms often burrow to a depth of seven or eight feet, it follows that they may play no mean part in undermining and burying loose stones and monuments of art. Through their agency a field near Mr. Darwin's house has been cleared of cobble stones within his remembrance, and this not so much from the fact that the pebbles have been undermined as because fine earth has been brought to the surface. Many of the foundations of Roman buildings recently discovered in Great Britain are preserved underneath this constantly accumulating deposit of "earth mould," which is from two to three feet deep over the ruins at Wroxeter. We shall wonder if some bold theorist does not soon attempt to account for the prairies of the West as the work of worms. The same action of worms which, in favoring circumstances, covers the surface with humus, in other circumstances promotes denudation, since it exposes the fine earth to the action of both wind and water.

The literary skill of Mr. Darwin appears to special advantage in this volume. He has invested a most unpromising subject with the charm of a romance, his style reminding one of Robinson Crusoe. Children, as we know from experience, read the volume with eager interest, and the philosopher may find much food for reflection in the amount of intelligence described as displayed by an animal so devoid of senses as Mr. Darwin proves the worm to be. Feeling and a faint sense of smell seem the only avenues through which the objects of sense perception penetrate the worm's mind, yet worms show signs of fear, are somewhat social, and have some power of attention; but we are sorry to say they are cannibals. After perusing the book it is difficult not to share in the enthusiasm of the author's closing paragraph:

"The plough is one of the most ancient and most valuable of man's inventions; but long before he existed the land was in fact regularly ploughed, and still continues to be thus ploughed, by earthworms. It may be doubted whether there are many other animals which have played so important a part in the history of the world as have these lowly-organized creatures."

The Hero of Cowpens. A Centennial Sketch. New York: A. S. Barnes & Co. 1 vol. 8vo.

THE preface to this volume contradicts its title. The hero of Cowpens stand on cover and frontispiece, while the prologue promises to show him the hero of all for which Arnold has been praised. The contrast is not needed for Morgan's fame, which shines distinct and peculiar among Revolutionary reputations. This memoir states, with complete frankness, the obscure origin, the narrow early life, and the lack of education or social influence of its subject. The striking features of the portrait redeem the commonplace setting, for which there is therefore the less need of such apology as is offered in suggestions of what parentage the Greeks in like case would have invoked, and in the boast that he was "the son of God, who is able to raise up his children from the stones."

Daniel Morgan was a yeoman commander. Not used to be called in counsel upon great operations, nor placed in separate responsible command, his qualities made him invaluable as an auxiliary in a war waged with militia levies in a rude country. They were promptness, subordination, close sympathy with his men, and the special training, for him and them, of experts in woodcraft and sharpshooting. Courage and endurance were matters of course, and honor and honesty innate with him. He was an aid for the most part to commanders of no high capacity. But the work he had to do was not the worse done because it was sometimes ill guided. What was laid upon him he performed perfectly, and it may be that more generous leadership might have afforded him greater occasion for independent achievement. His hardy constitution and rough early training enabled him to carry his men with little loss to the end of Arnold's Quixotic winter march through the wilds and torrents of Maine. In the assault on Quebec he was the only captain who fulfilled his task, actually taking a battery, entering the lower town, capturing "whole platoons" of prisoners, and carrying all before him till Montgomery's fall defeated the attack, and compelled his surrender. On his release, after eight months' captivity, the same qualities of hardiness and vigilance commended him to Washington, who placed him in command of 500 picked men, serving through the Jersey campaign on scouting and outpost duty, and on occasion as formidable skirmishers. In a letter to Washington, written four years later, he regrets that "during the whole course of the war he had never on any important event had the honor of serving particularly under him." Transferred to the northern army of Gates, he justified Washington's expressed dependence on him, his officers, and men. At Bemus' Heights the most stubborn fighters were his marksmen, and the decision of Saratoga hung upon the rifle-ball that by his special orders cut down Fraser. Yet he was barely mentioned to Congress, and not at all rewarded by them. After Burgoyne's surrender, eighteen months of service near Philadelphia and at Valley Forge followed, severe and skilful, but not conspicuous. In June, 1779, impaired health, together with a keen feeling of the neglect of Congress and the slight recognition of his value as an officer, led to his resignation.

Upon Gates's appointment the following year to a Southern command, he sought the help of Morgan once more. The retired colonel accepted such amends as he offered for his own injustice, but refused for a time to serve without deserved promotion. Moved at last by the wretchedness of South Carolina, whose citizens, says Bancroft, "suffered more, and dared more, and achieved more, than the men of any other State," and spurred by the news of Arnold's treason, Morgan yielded, and joined Gates in September, 1780. Congress soon after gave him the rank of brigadier-general, several hundred picked men were placed under his command, and by the orders of Greene, who soon superseded Gates, he occupied the northern border of South Carolina, with a force about half that of the main army, and with a large discretion as to its management.

The battle of Cowpens, fought in January, 1781, aided to make Yorktown in October possible. It was forced upon Morgan, yet he avoided being taken at a disadvantage. The ground was well chosen, the order skilfully arranged, and the movements carried out as planned. The commander's personal influence supplied the lack of training for many of his men who arrived the night before, and held them steady to their work. The complete success of the battle was the more brilliant as it was won over the most formidable partisan who appeared on the other side during the war. And it was followed up by a masterly retreat, made necessary by Cornwallis's approach, and managed so skilfully by a sudden doubling on the line of march as to rescue the fruits of victory in prisoners and spoils. Within a month afterward Morgan's failing health compelled him to resign—in February, not in October, as a misprint reads—and though he afterward joined Lafayette for a few weeks during the summer, he was obliged to deny himself the satisfaction of sharing the struggle and the honor of Yorktown.

The battle of Cowpens and its sequel gave earnest of a military genius which, if earlier recognized, might have grown conspicuous, with great results to the cause. Morgan's rank and fame were won by hard work of the march and field, not by plying in the camp the politician's arts. He had no chances for favoritism and no taste for intrigue. Extracts given from his correspondence show the esteem in which the worthiest of his brothers-in-arms held him; and the constant friendship of Lafayette testifies to his manliness and honorable character. It was hardly worth the author's while, for the sake of throwing out these qualities in a high light, to grind up Arnold again into black paint for a background. Morgan's native vigor, too, and his simple gallantry deserve to be celebrated in rather more dignified style than one that decorates itself with tags from Scripture, Shakspere, and the classics.

Through Cities and Prairie Lands. Sketches of an American Tour. By Lady Duffus Hardy. New York: R. Worthington. 1881.

LADY DUFFUS HARDY'S book is the record of a tour made by herself and a companion, a year or two ago, in Canada and the United States. Her narrative begins with the departure from England in the steamship *Sardinian*, and continues with a detailed recital of the incidents of her visits to Quebec, Montreal, New York, and Chicago, the experiences of the overland journey (via Salt Lake City), to California, an account of her stay in San Francisco, and sundry excursions in the neighborhood, and of her return thence, with short visits at Denver, St. Louis, Washington, and Boston. Lady Harvey is an observant traveller and a pleasant writer. She is always of cheerful mood and a friendly critic, especially of what she sees in the United States. But these qualities are hardly strong enough to lift her narrative much above the level of commonplace things. For some readers in her own country who have never travelled in America, her book may possess an interest which it is not likely to have for general readers here.

Still, even for us a special interest attaches to it from the fact of its publication almost simultaneously with Mrs. Dall's description of a journey, for the greater part, over the same ground and under somewhat similar circumstances. The two books, contrasted one with the other, afford a noteworthy illustration of what very different views two persons may take of the same thing. In the present instance there are two tourists, both ladies, both, as their statements imply, experienced travellers, both in many respects similarly situated, being unaccompanied by male escort, and both going over the same route at nearly the same time—so nearly, indeed, that when, on leaving Ogden, Lady Hardy pictures one of her "restless and lively" fellow-travellers, the recent reader of Mrs. Dall's experience at that place, not familiar with her personal appearance, might be pardoned the momentary suspicion that they went by the same train; and yet their impressions of many things are as different as light and shade. Mrs. Dall says: "I did not find it easy to travel alone beyond the Rocky Mountains. On the contrary, for the first time, I found myself commanding neither attention nor respect on the ground of simple womanhood." Lady Hardy says:

"In the next section to ours is a pretty young girl travelling quite alone from Boston to Arizona. A lady can do that in this country without running the slightest risk of annoyance or inconvenience in any way. The conductors and all the train officials devote themselves most loyally to her service, and are always at hand to give her any advice she may require. They pass her on from train to train or from stage to stage till she arrives at the end of her journey, having received the same courteous attention throughout. Indeed, to thoroughly enjoy travelling in perfect comfort and freedom from anxiety one must be an unprotected female."

Mrs. Dall found no palace or drawing-room car on the overland route—"only the ordinary Pullman sleeping-car, or silver-palace, with the usual abuses." She had great difficulty in managing her hand-baggage, as the colored porters expect large fees, and devote themselves only to men whose boots they black and from whom they receive much money. At Ogden, where Mrs. Dall arrived in a torrent of rain, she had "quite a long distance to go with three pieces of hand baggage. I could not," she says, "persuade a porter to touch them, unless I would leave them exposed on the platform at his discretion. I hired a boy to lift two, and then insisted on the shelter of a smoking-car for myself and my baggage, until a gentleman from Brooklyn procured my berth ticket. The three colored porters could not have been more disobliging if they had been three fiends." On the other hand, Lady Hardy finds the Pullman car "luxurious"; at Ogden, upon leaving the "rich, brown, sombre-hued Pullman cars" and resuming the journey on the Central Pacific in the "silver-palace cars," she finds "an obliging official" who "stands at the entrance of every carriage and shows you to your special section as courteously as you would be shown into the reception-room of a friend." She sees nothing fiendish in the porter. On the contrary, she describes the colored servant of the hotel-car on the Chicago and Northwestern Railway as a "good-humored negro, 'God's image carved in ebony.'" And so, throughout the two books, in a greater or less degree, the light that falls on Mrs. Dall's picture is opposite to that which brightens Lady Hardy's sketch.

BOOKS OF THE WEEK.

Sand, George. Indiana. Philadelphia: T. B. Peterson & Bros. $1.

Shairp, J. C. Aspects of Poetry, being Lectures at Oxford. Oxford: Clarendon Press. $2 75.

Sugar and Spice, and All that's Nice. London: Strahan & Co.

INDEX TO VOLUME XXXIII.,

JULY TO DECEMBER, 1881.

Summary of the Week's News.

24,'44, 64, 84, 100, 128, 146, 166, 186, 208, 226, 244, 264, 284, 304, 326, 346, 366, 386, 406, 426, 445, 464, 484, 504.

The Week.

AT HOME.

Arthur, Chester A., Vice-President, near succeeding to the Presidency, 1; becomes President without a Constitutional successor, 223, inaugural address, 241, intentions as to his Cabinet, 261, 301, asks Mr. Tyner's resignation, 301, message, 441, sends Commissioners to Chili and Peru, 441, confines office-seeking callers to certain days, 501—Attorney-General's report, 441—Anti-Monopoly Conference at Utica, 143—W. W. Astor running for Congress, 323, 324—American Bar Association on legal education, 144—American Iron and Steel Association on protecting the parts of the body, 205.

Bangor Collectorship disturbed, 2, in suspense, 103—John C. Burch, Secretary of the Senate, deceased, 81—John Bookwalter's political and economic views, 82—George Bliss on the treatment of the Police Commissioners, 82, chairman of a committee to amend district associations' constitutions, 403—Banking mismanagement working its own cure, 403, inspection, 442—Bankers' Convention at Niagara Falls, 125, 126—Bankruptcy law, Mr. D. C. Robbins's suggestions, 104, Western exemptions, 126—Boston, proposed meeting against Hartmann's extradition, 104, Pacific National Bank Failure, 403—George S. Boutwell on President Arthur, 261—Secretary Blaine's letter accepting office under Garfield, 301, retirement, 461, instructions to Kilpatrick and Hurlbut, 461, 462, instructions to Mr. Lowell on the modification of the Clayton-Bulwer treaty, 481—Gen. B. F. Butler unable to defend Guiteau, 301—Benj. H. Brewster appointed U. S. Attorney-General, 482—U. S. District Attorney Beatty on inability to convict of polygamy, 424, 502—Booth's Theatre sold, 503—Business, 2, 21, 42, 62, 81, 104, 125, 143, 144, 163, 184, 205, 224, 241, 262, 282, 302, 324, 343, 363, 385, 403, 423, 442, 463, 482, 501.

Civil-service reform lessons in Guiteau's attack on the President, 1, Convention at Newport, 126—Custom-house competitive examinations in N. Y., 42, custom-houses that do not pay expenses, 423—Roscoe Conkling's cheerful view of the situation after the attempt on the President, 1, formal condolences, 22, gratitude to his Stalwart supporters, 61, beaten by Sam Lowery, 241, Congressional services reviewed by F. W. Whitridge, 242, reasons for staying away from the Republican State Convention, 281—Chicago tariff convention, 403, 404—Coudert Bros. on the extradition of Esposito, 283—W. W. Corcoran on the choice of President, 3—Congressional nominations for competitive examinations, 61—Judge Nathan Clifford deceased, 62—Coles-Coleman homicide, 62—Dr. Howard Crosby on suppressing the liquor traffic in N. Y., 105—George S. Coe on the Currency of the Future, 126—Cornell crew accuse an oarsman of "selling out," 145, 185, 207—Cash-Shannon duel explained by Col. Cash, 164—Gov. Cornell will not dismiss Police Commissioners, 224—Confederate bond speculation, 364, monies recovered by U. S., 384—Comptroller of the Currency on national bank inspection, 442—Caldwell, Kansas, brigandage, 443—Cabinet changes contemplated, 501.

Congress, XLVIIIth, extra session of Senate: David Davis elected President, 302, report as to Custodian of the Treasury, 323, Lynchburg postmaster issue evaded, adjournment, 343.

——First session: Garland's Disability Bill (Senate), 461—Miller and Lapham's election confirmed (Senate), 462—Voorhees on the proposed retirement of silver certificates (Senate); Manning's bill for the relief of the Supreme Court (House), 481—Sherman's Funding Bill (Senate), 482—House Committees, 501.

Davis, David, made President of the Senate and suddenly respected by Republicans, 302, on the omission of the South from President Arthur's message, 461—J. C. Bancroft Davis appointed Assistant Secretary of State, 483—Silas B. Dutcher, Superintendent of Public Works and political "worker," 41.

Emigration head-money, test-case, 126—Senator Edmunds's letter to the Mass. Republicans, 163, article on the Mormon problem, 502—Ex-Secretary Evarts on the results of the Monetary Conference, 183—Elections in November, 363, 383—Elevated-road chicanery, 503.

Field, David Dudley, proposed international arbitration clause in treaties, 144—Cyrus W. Field's fund for Mrs. Garfield, 41, on the legal expenses of the Manhattan Co., 262—French wines, steadiness of price explained, 82, French visitors at the Yorktown Centennial, 28—Lieut. Flipper a defaulter, 164, money restored, 184, trial, 385—Judge Charles J. Folger appointed Secretary of the Treasury, 343, assumes the office, 385—Frederick T. Frelinghuysen appointed Secretary of State, 461.

Garfield, President, shot by Guiteau, 1, recovery, 21, 41, relapse and operation performed, 61, ball located, 81, second operation, 103, fresh relapse, 125, despondent outlook, "conservative" reports, 143, death expected, favorable change, 163, removal to Long Branch, 183, death, 223, foreign sympathy expressed, 2, 223, domestic and foreign mourning, 241—Guiteau's autobiography, 261, defence on the plea of insanity, 301, trial begun, 344, speech in court not proof of his insanity, 384, inspired by the Deity and the newspapers; to be gagged if obstreperous, 423, smartness on cross examination, 441, his counsel's lecture, 463, 483, his death-warning to the jury, 502—German Government's condolence with Mrs. Garfield, 241—General Grant's cheerful talk about the assassination, 22, nominates General Hancock for president of Aztec Club, 224—Gold, international struggle for, 163—Greenback conventions in several States, 164—Treasurer Gilfillan's report, 363—Jay Gould's life threatened by a blackmailer, 384, purchase of the Grand Opera House, 424—Senator Garland's Disability Bill, 461—Judge Horace Gray appointed Justice of Supreme Court, 482.

Hartmann, Leo, story of the Moscow mine, 82, identity denied, 184—Capt. H. W. Howgate's defalcation, 143—Secretary Hunt on the Navy and the mercantile marine, 385—Minister Hurlbut's vagaries, 462, dealings with the Peruvian Company's claims, 481—Heredity, Institute of, meeting in New York, 463—Timothy O. Howe appointed Postmaster-General, 482—Prof. Hilgard made Superintendent of Coast Survey, 501.

Institute of Heredity's meeting, 463.

James, Postmaster-General, plan of Congressional recommendations to competitive examinations, 61—Judge Jameson on corners in the grain market, 302.

Kansas, mobbing of a fraudulent banker, 443—Kalakaua, King, and his scheme for populating the Sandwich Islands, 243—Ex-Minister Kasson on the Isthmus canal, 384.

Lapham, E. G., elected Senator *vice* Conkling, 61—Senator Lamar and the Mississippi Governorship, 206—"Sam" Lowery beats Conkling in his own district, 241—George Law deceased, 404.

Missouri, train robbery at Winston, 42, at Independence, 206—Massachusetts Republican Convention's civil-service plank, 242—Minnesota, Governor Pillsbury on a cold choice between paying and repudiating, 302, bill passes House to issue bonds, 364—Senator Mahone's speech at Union League Club, 281, refusal to fight Early, 302, future relations to Republican party, 383—Attorney-General McVeagh's resignation, 241, 404, reported attempt on Redell's integrity, 404—Warner Miller elected Senator vice T. C. Platt, 41, talk on the paper tariff, 81—Judge McCrary's railroad decision, 62, 81—Manhattan Railway receivers' report, 185—Sergeant Mason to be court-martialled for shooting at Guiteau, 223, Methodism in Italy, 324—Mechanics' Bank, Newark, ruined, 344—Samuel Morley on American protection of manufactures, 344—Mint Director on further coinage of silver, 423—Mormonism, proposed legislation against, 463, 502.

New York, State: Senatorial balloting at Albany, Platt withdraws, 2, caucus called by Republican majority makes nominations, 22, Warner Miller elected *vice* Platt, 41, E. G. Lapham elected *vice* Conkling, adjournment, 61; New Code of Criminal Procedure goes into effect, 184; Gov.
